Words of welcome from Pedigree House

Firstly, thank you to all existing members for their continued support over the last year and welcome to any new members. After two years of uncertainty, it is refreshing that the shows and sales calendar has returned to normal. It has become clear that these events are a hub for bringing our community together, and it has been fantastic to see so many familiar faces while travelling across the UK over the last 12 months.

When it comes to shows and sales, it’s been a busy year – one of the most memorable moments has to be the recent female breed record at Stirling, where Gordon Pole Star X695 reached 40,000gns.

As with previous years, The Review contains some fantastic technical articles and insight into the UK beef market, including updates on imports and exports and an outlook for 2023. In addition, several case studies from existing and new members around the UK are also included, and shows and sales reports are back again.

Thanks must go to the Committee Chairs. They have helped pull together The Review of 2022, which showcases the fantastic work that has been undertaken at the Committee and Council level, as well as at a farm level. Thanks must also go to the team at Pedigree House for their help and contribution to this year’s Review.

We hope you enjoy the content in this year’s Review and a massive thank you goes to the advertisers, members, trade and clubs, without whom we would not be able to publish the annual Review. Hopefully, it should be an enjoyable read.

It’s been a challenging year for the farming sector, with high input prices and a long, dry summer. The ongoing cost-of-living crisis, and the continued upheaval caused by the war in Ukraine, remain a concern.

However, now is the perfect time to promote the merits of the Aberdeen-Angus breed, as we know our cattle can thrive on less inputs and produce quality beef that consumers want to eat. Let’s hope for a positive year ahead, where we can continue to produce beef that’s fit for the future. We wish you all the best health, wealth and happiness for the coming year.

BEEF THE FUTURE

Consumer demand for Aberdeen-Angus on the rise
Scored highest for taste, texture and succulence (ICBF 2020)
Known for sustainability and ease of management

All of this means one thing – there’s never been a better time to produce Aberdeen-Angus beef!

www.aberdeen-angus.co.uk | 01738 622477
A review of 2022 from Pedigree House

Last November, I was asked to step up to the role of Acting CEO. It was a great honour not only to be asked to do this but also to be interviewed and secure the CEO role.

2022 was a year of learning about how the Society worked and the broad range of work and services catered for by Pedigree House.

It is a great time to be working with the breed. Aberdeen-Angus sired cattle continue to dominate UK calf registrations - both pure and cross and out of beef and dairy cows - and consumers continue to value our product, paying a premium for it. This is a great place to be!

Last year was a more typical year for the Society, with Covid in the rear-view mirror. Staff returned to the office, and while we were close to what went before, some innovations from lockdown remained. For example, most Committee meetings took place over Zoom, leading to more flexibility in when meetings could be held. This also brought a greater level of agility to Council as single-topic meetings could be convened and decisions made in a more timely manner.

2022 also saw a return of a nearly full show season calendar. Exhibitors and members were delighted to get back out and promote our fantastic breed to industry and the wider public. Supporting the main shows throughout the year across the UK gives members a great opportunity to exhibit cattle no matter where they are. A great thanks must go to the East of England Aberdeen-Angus Club and the Royal Norfolk Show for hosting the Summer National. It was a great two days, crowned by the Aberdeen-Angus taking the Heygates team of five prize at the show.

Last year we also had some staff changes. Emily Simpson decided to hang up her Aberdeen-Angus halter and move on to other things. We wish her well in her future endeavours. We also welcomed the arrival of two new members of staff. Natalie Cormack joined Pedigree Cattle Services as Breed Development Manager to take over from me and integrate more commercially focused projects. In addition, Sarah Wood joined the Registrations team. Both have settled in well and are making themselves valuable to the team.

While there is much good news from last year, there is no time for complacency. There are significant challenges for the future with a reduction in the suckler herd across the UK and challenges from other breeds never being far away. The ambition of the current strategic plan is to grow the Aberdeen-Angus share of BCMS registrations to 30% by 2031. However, if there is a reduction in cow numbers, an increase over that market share will be required to continue to sell a similar number of bulls.

DNA is an improving picture with some initiatives at the office level reducing problems and improving sample tracking. However, cost-wise, it is a significant burden on the Society, and the great frustration is that not all bulls tested go on to sire calves. The Society is looking for a way of reducing the burden, whilst retaining the best of the work that has come to date.

One of the key tasks I was given when I first joined the Society was the inception of ILR Online, an upgraded front end to our Registrations system. I am pleased to report that this year will see the first calves registered through the new system and by the end of quarter two, all members should have access to the new system.

This increased control will also see us develop a new transfer system to reduce processing time alongside longer-term developments around data entry to reduce further the time required to manage your Aberdeen-Angus herd data.

2022 saw the YDP return to activity with conferences and workshops held through the year, culminating in Nicola Howie winning the 2022 final. Hosting YDP workshops is no mean feat and the Society owes a debt of gratitude to all those who have hosted workshops throughout the year. We are also incredibly thankful to the Dick family at Westerton, Stirling for hosting the 2022 final in such fantastic style. Thanks also go to the trainers, judges and other helpers throughout the year.

This is only possible with a supportive Presidential Team and wider Council, coupled with a great team at Pedigree House. My thanks go to them all for their efforts throughout 2022 and for making the transition to CEO as seamless as possible. Thank you all!

President’s focus

Last year we saw the Aberdeen-Angus breed moving forward at a pace with the breed continuing to evolve and develop in an ever-changing world.

As we move on, we say goodbye to trailblazers who shaped our past, including Willie McLaren’s passing and the Shadwell herd’s dispersal. The breed, however, moves on into the future in safe hands. During the 2022 YDP Final, Seonaid McLaren, Willie’s granddaughter, was pipped by one point by Nicola Howie, the daughter of Ken. The quality of the participants was exceptional. The Society should be immensely proud of how the YDP continues to develop and the quality and enthusiasm of our future.

No one can predict the future, but with the huge upheavals and uncertainty in the world, if you are farming cattle, the clever choice is the Aberdeen-Angus breed. With low production costs and high premiums, it’s no surprise it is the number one breed in the UK.

At Rosemead, we have gone further with lowering the costs of production. We have done this by focussing on being disease-free, with very little antibiotic use, no vaccination, worm counting, and no worming for several years. We also finish on grass with no creep and have traditional crop rotations and high clover mixes. I have never used artificial fertilisers, and our spraying is minimal. I know many of you cannot go down this road, but it is a road the breed is ideally suited to.

Last year we managed a full show and sales programme. February Stirling saw two record prices, first for Duncanziemere Jacobite W374 from the Clarke family selling to Idvies and Ballindalloch for 30,000gns. This was followed by Bieslack bowing out in style, with Bieslack Dean Martin W063 making 38,000gns to Wedderlie. Well done to all.

The Shadwell dispersal at Skipton was a wonderful sale, with two breed records broken. In-calf heifers averaged £9,400 while maiden heifers averaged £10,500, an excellent record, well done to Robert Clark and family.

At Balmoral, a heifer Woodvale Delia X867 from the Armour family, was tapped out as champion. Ann and John Henning were reserve, with Drumcorn Lady Ida U492. The Highland had a very large entry, and it was Stouphill Quorum T208, a cow from Dallas Allen who stood top; reserve from the Wattie family was a three-year-old cow Tonley Lady Heather V591. Lady Heather was tapped out as the national champion by Brian Clark. His reserve from Brailes Livestock was Weeton Blackbird V519.

At the Royal Welsh, Glympton Farms picked up both honours, with Glympton Riley V261 standing champion and Glympton Pride Jean T127 taking reserve. Stirling in early October saw a heifer from John Elliot achieve a breed record for a female at 40,000gns.

Congratulations to all involved and well done to all the winners and the countless Angus enthusiasts who support Aberdeen-Angus classes across the country.

One of my highlights of the year was presenting Barbara Webster with the President’s award for outstanding contribution to the Aberdeen-Angus breed. Barbara has worked for the Society for 28 years in two spells – from 1971 to 1980 and from 2002 to the present. She will continue to work for one day a week following her retirement. She is only the sixth recipient of the prestigious Watson Award, which is made in memory of Hugh Watson, one of the great founders of the breed early in the 19th Century. Her dedication and integrity helped deliver the Society’s market-leading performance evaluation scheme following the acquisition of the UK rights for the Australian Breedplan system in 2002.

The Council and the Committees of the Society had a hectic 2022. We continued to use Zoom, but face-to-face meetings seemed much more productive.

We had a Council meeting at Dovecote Park in July and toured the modern factory and state-of-the-art cutting rooms. We were very impressed with the eye for quality throughout the production process. Thank you to the team at Dovecote for enabling us to visit.

We have so much Council business, which is complex and requires a level of detail that takes time to deliver. This year, hopefully, you will start to see results. One of the Society’s biggest problems is that we pay for DNA testing. It is financially unsustainable for the Society, so we, as members, must help with this. We are still at the development stage of DNA. How and when we test and which animals we need to test, or the best process, are all being looked at to see if there is a better, more sustainable way. We should have a way forward very soon.

I want to thank all the Council and especially the Committee Chairs for their hard work.

One of the Society’s significant developments last year was the recruitment of Natalie Cormack as Breed Development Officer. Natalie comes with a wealth of knowledge on genetics and she is already making a difference. Robert Gilchrist vacated the position in March as he moved up to the Chief Executive role. I want to thank Robert for all his hard work and the rest of the team at Pedigree House, who work hard on our behalf. It is often a thankless task but they plough on with enthusiasm.

The YDP final at Stephanie Dick’s was a great success. Stephanie and her family went above and beyond to deliver a superb day. Thank you also to Richard and Carol Rettie, who are great supporters providing a large number of cattle, and William McLaren, who also provided cattle for the day. There was a large number of helpers who made it all run smoothly under the guidance of National Co-ordinator Tina Russell. Thank you all. I would also like to thank all the farms across the country who had workshops and the individuals who helped on those days. The YDP is extremely important to the Society, and without you, we could not do it.

Paul Jeenes continues to help and guide the Society with liaisons with the processors and retailers. He has helped Robert understand the industry and put him in front of the right movers and shakers. Thank you Paul.

I also want to thank my team back home at Rosemead who are quite used to me either not turning up for work or having to leave halfway through a job to ‘go to a meeting’.

Finally, I thank the other members of the Presidential team of Finlay Munro and Ian Watson. They have dedicated their time to the Society and provided Robert and me with much-needed guidance.

Angus Stovold
The Aberdeen-Angus Clubs

The Aberdeen-Angus Clubs play an essential part in representing the breed and the Society around the shows and sales throughout the year to provide the Clubs with tools to promote the benefits of the breed throughout the supply chain.

If you are reading this and are not a member of your local Club and have an interest in learning more about membership benefits, contact the Secretary in your local area.

The regional Clubs are not just for breeds but for anyone interested in the Society and the breed and the Society around the shows and sales within their regions, as well as organising meetings, herd walks and competitions throughout the year.

The Society intends to help the Clubs become essential in publicising the breed and brand going forward. We will be making investments throughout the year to provide the Clubs with tools to promote the benefits of the breed throughout the supply chain.

If you are reading this and are not a member of your local Club and have an interest in learning more about membership benefits, contact the Secretary in your local area. The regional Clubs are not just for breeds but for anyone interested in Aberdeen-Angus cattle — be it breeding, beefing, or wanting to be part of the number one breed in the UK.

www.aberdeen-angus.co.uk/the-society/regional-clubs/

2022 ANNUAL HERD COMPETITION RESULTS

** Stock bull **

- 1st Gretnahouse - Gretnahouse Eva (Y222)
- 2nd Comlongon - Comlongon Lola (W523)
- 3rd Longbank - Longbank Petula W232

** Best cow **

- 1st Longbank - Longbank Jewlianna
- 2nd Gretnahouse - Gretnahouse Blackbird
- 3rd Abbey - Abbey Ladysman

** Heifer calf born April onwards **

- 1st Carruthers - Carruthers Cassie
- 2nd Longbank - Longbank Petula W232
- 3rd Comlongon - Comlongon Lola
- 4th Longbank - Longbank Blackbird

** Stock heifer **

- 1st Gretnahouse - Gretnahouse Earthquake
- 2nd Comlongon - Comlongon Lexi
- 3rd Longbank - Longbank Jenny

** Bull calf born Jan-March **

- 1st Carruthers - Y222
- 2nd Gretnahouse - Gretnahouse Erica
- 3rd Carruthers - Carruthers Elspeth

** Yearling heifer **

- 1st Newbank - Newbank Duke
- 2nd Carruthers - Carruthers Earthquake
- 3rd Abbey - Abbey Ladysman

** Upto 3-year-old heifer **

- 1st Longbank - Longbank Petula W232
- 2nd Housesteads - Housesteads
- Lady Heather
- 3rd Abbey - Carruthers George
- 4th Comlongon - Comlongon Black Rosel

** Medium herd **

- 1st Comlongon - Comlongon Lexi
- 2nd Longpark - Longpark L232
- 3rd Abbey - Abbey Ladysman

** Large herd **

- 1st Comlongon - Comlongon Lexi
- 2nd Longbank - Longbank Polly
- 3rd Carruthers - Carruthers Earthquake
- 4th Longbank - Longbank Blackbird

** Heifer calf born on April onwards **

- 1st Carruthers - Carruthers Cassie
- 2nd Longbank - Longbank Petula W232
- 3rd Comlongon - Comlongon Lola
- 4th Longbank - Longbank Erica

At the May Carlisle sale, there were three members selling stock - Carruthers, Newbank and Kingholm with prices of 4,200gns, 4,500gns and 4,000gns, respectively.

Some members travelled to the summer shows, where Hardlawbank exhibited at the Highland Show and Kingholm exhibited at the Yorkshire Show. Coming away with a 4th and a 6th. Dumfries Show was well represented and Hardlawbank's yearling heifer took reserve champion.

Our annual herd competition took place in September. Many thanks to everyone who participated, and a big thanks to our judge, Owen Tunney of the Morpheus herd based in Cheshire. There were more entries than ever, and the quality of stock on show was great. Well done to all participants.

This year’s plans are already well underway with herd visits planned, as well as stock judging and the herd competition. We have over 15 herds now involved with the Solway Club and we are always looking for more members to join, so please get in touch if you wish to participate.

Thomas Peters, Club Chairman

Solway Aberdeen-Angus Club

2022 began with our AGM and prize-giving held at The Auctioneer, Carlisle. Last year also saw a full return to shows and sales, with many Solway members participating. The Davidsons' Wedderlie open day gave us a chance to piggyback a trip to the Borders, where a number of members were present to see some outstanding stock on show and have a good day.

Last year we also carried out our stock judging event scheduled for 2022, but postponed due to Covid. The event was held at Matthew and Heather Curry’s Kingholm herd in Dumfries. The event was a success, with great feedback and a good turnout. Thank you very much to both Mathew and Heather for their hospitality and for providing excellent stock for the event. Winners on the day were Stuart Burgess (Abby) and James Ree (Chapelton).

SHOWS AND SALES

February’s Stirling sale saw the Club represented by Kingholm and Carruthers achieving top prices of 10,000gns and 7,000gns, respectively.

www.aberdeen-angus.co.uk
PENWAC and North West Aberdeen-Angus Club

It is sad to report the loss of a friend and Club member Peter Stanley, husband to Maureen of the Coneygarth herd, which was established in 1997. Peter enjoyed showing cattle at local shows. He helped me steward at the shows and at the expo, and was a gentleman always ready to help; he will be very much missed.

At the 2020 AGM, little did we know Club activities would cease until the 2022 AGM. However, Club members were glad to get out and meet up, so we had good attendance. Robert Gilchrist, the newly appointed CEO, talked about his history and Society business. A visual presentation of costings was also very well received by members. Council officer Adrian Johnson also attended and answered members’ questions.

Owen Tunney hosted the YDP at Northwich, and youngsters, as well as PENWAC members, attended. They were able to learn how cattle are prepared for shows. A skilled clipper, Owen, showed them how to wash and clip. They learnt how to correctly halter, tie up an animal, and stock judge cattle with Jim Barber. Owen gave the children veterinary tips. It was a fantastic day and well done to Sophie Tunney and William Ashworth for getting to the YDP finals.

Mary Hamnett, Club Secretary

Central Aberdeen-Angus Club

As we start the new year, it is nice to reflect on a more ‘normal’ year post-covid. The weather was kind last year, although a bit too dry in some of our member’s areas.

Congratulations must go to all our members who were successful at breed sales, summer shows, and calf shows. It takes a lot of work and time to support our agricultural shows, so thank you to all who attended.

Last year we managed to fit in two super visits viewing Angus cattle. Our first visit to Messrs Mather of Shandford was a real eye-opener! Five years ago, they were using 12 Charolais bulls. Now they have been replaced by Aberdeen-Angus bulls. Seeing the detail and expertise Graeme Mather puts into his breeding programme was of great interest to everyone there. Nearly 40 members and friends attended.

Then, in the afternoon on the same day, we visited Tom Hopkinson’s herd at Lindertis, who is rebuilding a herd that was very famous in the 1950s and 60s. The females show a lot of promise and with young bulls coming on stream, I’m sure we will hear a lot more from this herd.

Thank you to both breeders for a grand day out.

David Murray
Chairman of the Central Scotland Aberdeen-Angus Club

Our annual stockjudging event was held at HW Netherton Angus in September. A good turnout of members ensured some competitive judging. Thank you to William McLaren for allowing us to look at many excellent cattle.

Wishing all members and friends a happy, successful, and peaceful 2023.

Dave Murray
Chairman of the Central Scotland Aberdeen-Angus Club

PENWAC HERD COMPETITION

Wanda Tilson and partner Julian judged the Clubs’ herd competition. Here are the results.

Stock bull: 1st Hurries herd, Airedale Euston. 2nd Buckhurst, Morpheus Rolex. 3rd Mobberley Rancher.

Bull under 2yrs: 1st Millstones herd, Crookhill Duke. 2nd Buckhurst Prometheus. 3rd Woodmoss Blelack Egotist.

Best cow: 1st Morpheus Rosebud U040. 2nd Pilsbury Cherry Iton T368. 3rd Woodmoss herd, The Moss Pastiche T446.

Heifer under 2yrs: 1st Mereside Dutches X085. 2nd Woodmoss herd, The Moss Queen Mother W629. 3rd Airedale Elie X015.

Heifer calf 2022: 1st Morpheus Rose Y105. 2nd Buckhurst Top Lass Y314. 3rd Blackwatch Jolly Erica Y757.

Best heifer group: 1st Buckhurst. 2nd Morpheus. 3rd Mobberley.

Overall herd: Wood Moss.

www.aberdeen-angus.co.uk

PENWAC and North West Aberdeen-Angus Club

Members also had the opportunity to visit the Wedderlie open day. The herd was a real credit to the Tilson family, seeing the 230 suckler cows which produce excellent stock bulls, breeding cattle and finished cattle with consistency. The family have a great passion for the breed, which Marion’s Grandfather established in 1942 with a few Angus cattle compared to what it is today.

The Exhibition Unit attended three two-day shows last year - the Royal Cheshire, Royal Lancashire and Westmorland. It was good to be on the road again. At the Cheshire Show, Owen took the championships with his home-bred cattle.

The Exhibition Unit last attended the Lancashire Show a few years ago. The champion was awarded to the Webster family’s bull, Blelack Egotist, with reserve going to the Walsh family with their heifer Buckhurst Blackbird.

The Westmorland Show was well attended, with Brailes Livestock bringing their show team. They won overall champion.

John and Gwen Hadwin from the PENWAC Club took reserve champion and best animal bred by exhibitor prize with their heifer Aulthurside Diana.

Thank you to all the teams that showed at all the local shows with great success, championing the breed.

Hopefully, we will have more activities this year, kicking off with our AGM on 26th February at The Garstang Hotel and Golf Club.

North East Scotland
Aberdeen-Angus Club

North East of Scotland breeders continued to flourish at local and national shows and sales last year in a very special year for the Club.

2022 marked the 50th anniversary year of the North East Club! With the show circuit and bull sales back to normal, our Club members returned with a bang.

Following the hugely successful dispersal of the Blelack herd in October 2021, there was a final flourish for the Massie Family at the February Stirling sale as they sold Blelack Dean Martin W063 to Wedderlie for 38,000gns, setting a new centre record in the process. It was also another good sale for the Wattie family selling Tonley Potter and Alba (overall reserve and junior champion) for five-figure sums. Cairnton, Deveron and Tynet herds also enjoyed a productive show and sale, with class winners, tickets and strong averages.

Following Graeme Massie’s dispersal, he was a very able judge for our 2021 Black Beauty Bonanza. Despite Storm Arwen, over 90 calves and yearlings were out in force from 26 exhibitors. There were championships for Tonley, Auchincrieve and Retties and other herds excelling with class winners, including Newton Muchalls, Harestone and AJR Farms. Overall an outstanding return to our main event considering the challenges affecting many North East herds, including power and water being off for up to eight days!

The Stirling May sale was a good day for the Norrie family with their Wrae herd, selling their bulls at top prices. Following further interest from new Angus breeders within the area, the Club was able to host a ‘New Breeders Day’ in May with the kind permission of Hamish and Margaret Sclater at Deveron, Turriff. This event followed a successful Scottish YDP event the previous day, and the event offered those that perhaps had exceeded the age bracket for YDP the chance to mingle and gain experience from some more seasoned breeders. The event was a great success and will hopefully give new breeders the confidence to feature at forthcoming summer shows, bull sales and calf shows. A hearty thanks to all those involved.

The local summer show season kicked off at Echt with the Wattie family taking the overall interbreed champion on the day with Tonley Lady Heather, with her heifer calf at foot. This was the start of many championships for this outfit going on to take, notably, the overall champion at the Angus Summer National at the Royal Norfolk Show and champion at the Great Yorkshire Show. The North East Club also attended Banchory and Turriff Shows, with Graham and Fiona Willox taking the Angus championship at Banchory and the Watties returning to glory at Turriff with Lady Heather. This was yet another opportunity for Mark Wattie and Beth Dandie to meet Princess Anne as Tonley Lady Heather was awarded yet another interbreed title with a strong entry of 26 Angus cattle forward. With such a big club milestone year, it was important we celebrated. With previous uncertainty around Covid in early 2022, we opted to combine a weekend of celebrations around our flagship event, the Black Beauty Bonanza. The exciting agenda kicked off on the 25th November with our usual Black Beauty, which was followed by an anniversary sale of elite females. The sale was co-ordinated by Josh Dowbiggin, ANM and the North East Club to ensure some of the finest Angus females from North East Breeders were available on this one-off occasion. Some herds offering females for sale included Cairnton, Auchincrieve, Deveron, Ballindalloch, Morven, Stephick and Tynet.

The following day was a great chance to visit two North East herds, with the kind permission of AJR Farms, Logie, and a commercial Angus herd courtesy of Mr W Ritch, Fingask. Lunch was served at Brewdog HQ at Ellon and the finale to the weekend was a dinner dance at Lochter in the evening to toast another 50 years! What a great end to the year!

**NORTHERN IRELAND**

**THE ABERDEEN ANGUS CLUB**

Visitors always welcome by appointment

**Chairperson**: Hylda Mills Tel: 07958052121
**Secretary**: Cathy O’Hara Tel: 07968888001

Members often have stock for sale. Please contact the herds directly.
Normal activities of the Northern Ireland Aberdeen-Angus Club resumed in 2022.

The first show and sale of the year was held in Dungannon Farmers Mart in February and a top price of 4,200gns was achieved. The next month saw our first AGM in three years. Our popular member Hylda Mills was elected Chairperson, with Ian Browne appointed Vice-Chairman. Our thanks goes to our outgoing Chairman, Alan Morrison, who continued to steer the Club for an extra two years. Presentations of awards from the 2021 herds competition were made on the night.

The April show and sale in Dungannon saw a lively trade and a total clearance, with the 5,000gns barrier being broken twice and the overall average jumping 660gns from February.

When the summer show season kicked off with the Royal Ulster Agricultural Society (RUAS) at Balmoral, it became evident that stock numbers in most breeds were well reduced from pre-Covid entries. However, the trend was reversed for Aberdeen-Angus at our summer show in Clogher where we had a tremendous turnout of high quality cattle.

The herds competition was held in August and we were delighted to have Ian Watson from the Kersquarter herd as our judge. We had an amazing entry of 31 herds and Ian had a mammoth task to judge them in less than five days, which he executed with skill and patience. His week in Northern Ireland concluded with an open day at Tyrella, Co Down, hosted by the Murnion family and brilliantly organised by our new Chairperson. The results and awards of the herds competition were presented and everyone present agreed that it was a unique event in an outstanding location.

**THE WINNERS WERE AS FOLLOWS:**

- **Large Herd:** Robin and Peter Lamb’s Richhill herd
- **Medium Herd:** Kenneth Bready’s Kiltarriff herd
- **Small Herd:** James Mallon’s Knockoneill herd
- **Champion Stock Bull:** Jonathan and Lisa Doyle’s home-bred Drumhill Lord Hatfield R532
- **Cow Family:** Jonathan and Lisa Doyle’s Lady Heather family
- **Champion Calf:** Kevin McOscar’s Island Farm Toplass Y156
- **Futurity Heifer:** Gerard McPeake’s Grover Grazer Princess Betty W461
- **Newcomer Award:** Mena McCloskey’s Ard Dubh herd

Any Aberdeen-Angus breeders in Northern Ireland who are not currently members of the Club should consider joining. It provides a great opportunity to network with others who share your interest in the breed and make no mistake, you will be made very welcome in our Club.

Cathy O’Hara, Secretary
Last year started with the Club’s AGM, where Simon Long of the Long Angus herd was elected Chairman and Graham Gower-Smith of the Glaven herd was elected Vice-Chairman.

In April we held an enjoyable YDP day, which Duncan and Tracey Jeary kindly hosted at Hawthorn Farm, Briston. Numbers were lower than in previous years, but the enthusiasm was high, as were the skills shown by our young breeders.

Thanks to Terry Ives, Meg Atkins and Jess Musk for their input on ringcraft and stock judging.

There was also a talk on the safe use of medicines from Isle Veterinary Group.

Many Club members entered shows throughout the year and came away with great successes. There was a strong Club presence at The Royal Norfolk Show, showcasing good quality cattle from our region.

Last year’s herd competition was hosted at Meadow Brook Angus and thanks to Mark and Sue, the event was a great success. Also, thanks to Robert Clarke for taking the time to judge all the cattle entered.

Sadly, last year saw the dispersal of the renowned Shadwell herd. It will be a loss to our region, but it was an excellent opportunity for other herds to purchase some of the top families. The sale was held at Skipton and was a huge success. The quality of the cattle was clear to see, and this was echoed in the interest in the sale ring.

We wish Robert Clarke and his family all the best for their future plans. They will be missed at the Club.

Highland Area Aberdeen-Angus Club

I was great to finally get everyone together at our 45th AGM last February. Our guest speaker for the evening was William McLaren and his wife, Karen. William took us on a fascinating tour of the world, introducing us to the different types of Angus in all the countries he’s visited, and highlighting the role each played.

Ahead of last year’s show season, we added the final piece of livery to the back of the hospitality caravan. This contained the strapline ‘you are following the UK’s number one beef breed’. What a great message to be shared as the caravan tours the countryside. Many thanks to the Society for financing this.

It was brilliant to be back at all the shows, catching up with friends and enjoying the spectacle of live cattle in the show ring. Our members enjoyed success both locally and nationwide.

In August, 11 club members braved the airports and headed from Inverness to Gatwick to enjoy a three-day whistle-stop tour of eight herds in the South East of England. We are incredibly grateful to Angus Stovold for making the trip a success. It was eagerly anticipated following a two-year wait due to the pandemic.

South East England Aberdeen-Angus Club

2022 was a quiet year for the Club. In March, we held our AGM and lunch. We met at Lydling Farm, where Robert Gilchrist joined us and Angus Stovold and Tom Beadie showed us some of their Rosemead cattle. The meeting then followed at Cross Farm. John O’Hara was elected Chairman and Tom Beadie, Vice-Chairman. Robert Gilchrist gave a fascinating presentation and we enjoyed an excellent lunch organised by the Stovold family.

In the autumn, a group of members went on a visit to Southern Ireland. The first afternoon took us to the Clontead herd of Eustace and Deirdre Burke. We saw some tremendous cattle, and as it turned out, the first animal we saw on tour went on to claim the supreme national calf champion a week later at the Irish Aberdeen-Angus Association (IAAA) Autumn Extravaganza.

We were treated to some spectacular views from the farm and even better hospitality by Eustace and Deirdre back at the house. A theme of the tour started that evening with the coach driver, in the nicest way, telling us he would run out of driving hours to get us back to the hotel if we didn’t drink up and get moving!

We also visited Albert and Jennifer De Cogan and the Mogeel herd. The day started a little wet, but that did not dampen spirits and we enjoyed a lovely morning strolling through some superb cattle. Again, we were treated to some fantastic hospitality, and great fun was had. We might all still be happily sitting around the table with Albert and Jennifer now if it had not been for our brave coach driver eventually insisting we needed to leave!

Our Club members were treated to the most amazing hospitality, and we can’t thank our hosts enough.

In September, the nation mourned the death of our Monarch. Not only did we lose our Queen, but the countryside lost someone who understood how we work. William McLaren very kindly volunteered to head north again and judge our Pedigree Herb of the Year competition. The results will be announced at this year’s AGM.

At the end of last year, we also enjoyed a micro tour of the Orbiston herd with the kind permission of the Shepherd family. Doug Lawrence and Sam Milne were our hosts for the day, rounded off with a BBQ sponsored by ABP.

The last date in the diary was a trip to Elgin in December for a pre-Christmas meal and to see comedian Jim Smith’s new show. This was just the tonic to round off the year.

We look forward to more of the same this year!

Our next visit took us towards Killarney in County Kerry, via the scenic route. A little behind schedule and before we left County Cork, we stopped at John and Beatrice Appleby’s Carrigroe herd, where we saw some lovely cattle. With our coach driver beginning to panic about his driving hours and not yet over the border into County Kerry, we persuaded him to stop at Keith and Caroline Vicker’s Carbery herd. We were pleased we did and saw some lovely cattle, including a couple of the animals from their recent sale and another calf that went on to be reserve calf champion at the National Calf Show a week later.

With our coach driver now in full panic mode, we hit the road to Kerry.

We also had the pleasure of visiting Matthew and Rita Goulding near Ballyduff. We saw some impressive stock, including some super young bull calves. The scenery was spectacular along the coast and everyone enjoyed viewing fabulous cattle in such a setting.

Many thanks are due to Richie Lombard of the Dulague Red Angus herd, who accommodated us for a visit a little later than scheduled on our way back to Killarney. We saw some lovely red cattle and two very nice heifers who were sold the following week at the IAAA Autumn Extravaganza.

A huge thank you to all our hosts, who were fantastic and made the trip enjoyable.

Chairperson: Richard Ashenden  
T: 07740 870682  
E: rashenden@outlook.com  
Secretary: Lucy Pulsford  
T: 07712 510311  
E: lucyswaac@outlook.com
Our AGM was held last March at Devon Hotel, Exeter. Richard Ashenden remained as Chairman. Gill Quinn stepped down as Treasurer after many years of service, and Sue Pulsford was voted in. Myself, Lucy Pulsford, was voted in as Secretary for the coming year.

Devon County Show was the breed stand’s first show of the year and proved popular with show visitors and members. Our thanks to members who gave their time to man the stand on show days.

A big thank you to Sue Pulsford for sorting and operating the stand, and showing cattle at the same time. It would not have been possible without her.

Congratulations to all our members who succeeded in the show ring last year, proving that hard work and dedication pays off.

The attendance of South West members at the local shows is so valuable, helping keep the Aberdeen-Angus classes open and raising the breed profile.

One of our members, Judith Denning, held the Youth Development Training Programme at Temple Aberdeen-Angus last April. The day included stock judging, talks on the safe use of medicine, clipping, washing and ringcraft. It was a well-attended day for the up-and-coming members of the Aberdeen-Angus world. A lot of hard work made this day a success and a big thank you is deserved.

We held a very interesting herd walk in mid-September, hosted by Angus Neish, in Wiltshire. All who attended the herd walk had great praise for the farm and the cattle they saw. It was a fantastic day for the members to socialise and talk about the breed we all love.

Our thanks go to all our South West of England members for their support and determination to keep the Club going during a few very tough years. As a Club, we look forward to the years ahead with resilience and determination, welcoming new breeders, non-breeders and those interested in the breed.

Please do not hesitate to contact us or see our Facebook page for news and updates, South West of England Aberdeen-Angus Club.

Lucy Pulsford – Secretary

We would like to thank all customers old and new who purchased stock in 2022.

The Aberdeen-Angus Cattle Society
Aberdeen-Angus my breed of choice

“I know that my Aberdeen-Angus cattle thrive on an all-forage diet and produce beef that is synonymous with a brilliant taste experience. With premiums up to 25p/kg, we can’t go wrong.”

– Michael Shannon - Thankerton Camp Farm

To see bulls for sale in your area, visit: https://www.aberdeen-angus.co.uk/members-for-sale/
South West Scotland Aberdeen-Angus Club

2022 was the year we saw shows and sales return bigger and better than before. With the season back in full swing, it was there for the taking.

The year started with a bang in the sale ring at the February bull sales when the Clark family from Avisyard hit a high with Duncanziemere Jacobite selling for £30,000 and his pen mate Duncanzemiere Mr Bond for £11,000.

Following on from their success at the bull sales, their luck continued at Ayr Show, where they had a clean sweep of red tickets. They also claimed the titles of champion, reserve champion, best Aberdeen-Angus bred by exhibitor and first place Aberdeen-Angus yearling heifer exhibited by the South West Scotland Aberdeen-Angus Club.

The sale at Carlisle also provided a good trade for members with an 86% clearance rate and a £7,000 call for the McCornick family and £6,500 for the Clarks with Duncanziemere Extra.

The final sale of the year saw another trip back to Stirling, with 37 bulls selling to average £5,398. The Clark family achieved a double bonus of £7,000 for both Duncanziemere Proud Ice and Edinburgh and McCornick Dark Knight realised £4,800.
The Aberdeen-Angus Advantage

Easy calving reduces the potential for empty days thanks to less interventions.

Low birthweight and easy calving means greater calf survival, increasing productivity.

Suckler cows that are cheaper to keep.

Short gestation means more days in production and more milk in the tank.

Up to 25p/kg premium price on offer worth up to £80/head on a 330-kilo carcase.

Easy fleshing cattle can be finished from forage reducing expensive concentrates.

25 litres/day

Embrace genomics to increase accuracies in Aberdeen-Angus herds

In last year’s Review, I ended the DNA Committee report by stating, ‘the time for genomics isn’t overdue, but the time is now’.

By the time you read this, we will have received presentations from potential genomic service providers and have almost finished evaluating them.

Genomic evaluation has the potential to improve the reliability of performance recording markedly. Various weights for age and ultrasound scanning remain the gold standard, but two of the biggest concerns for breeders when commenting on EBVs are calving ease and accuracy.

Genomics, given time, will identify common genes in many herds, which should iron out many of the anomalies found regarding calving ease. However, it is in lifting accuracies that it is most important.

While genomics will do little to lift the accuracy figures on an animal with very high accuracies, it will significantly raise the accuracy for animals with low accuracies. This will be relevant in herds that have not recorded regularly, who have few animals moving to other herds for breeding, or for those using older bloodlines and, of course, imported genetics.

The uplift can be as much as 40%, putting an end, at least partly, to the scenario of an animal’s figures collapsing after a few seasons of use.

The other goal of the DNA/Genomics Committee, in conjunction with the Registrations Committee, has been looking at ways to reduce the spending on DNA analysis. Several possible solutions have come to the fore, with the Breed Fraction Test and a Genomic Relationship Matrix. These will be explored to see whether they are more cost-effective for the Society, processors and retailers to authenticate Aberdeen-Angus beef.

In addition, much can be done by individual members to reduce the Society’s workload and spend on DNA. For example, the Society should be notified of any animal which isn’t to be used or sold for breeding. We will shortly have a simple way to allow this to happen.

Genomics has the potential to streamline EBVs to become more accurate and to allow a breeder to make decisions based on them at a much earlier stage. Of course, genomics will never take over from weighing and scanning, with phenotypic measurements still the backbone of any herd. It certainly will never replace a stock person’s eye when picking herd replacements. However, it is a tool to help.

Finlay Munro
Chair of the DNA Committee
2022 was another hectic year for our Committee, with some interesting projects getting underway. Our job as a Committee is to look at improvements we can make to the breed and the Society. We are always looking to the future, whether that’s embracing new technologies or looking at how we can improve the Youth Development Programme. Following on from the SWOT analysis we completed in 2021, many of our key projects have resulted from identifying opportunities and working on our weaknesses. The beef industry is competitive, so we must keep moving with the times to keep our spot at the top of the BCMS standings.

Last year we spent a lot of time building our new Dairy Index. This tool is helpful for dairy farmers, calf rearers, finishers and bull breeders. It will help them select the most relevant genetics to their operation and improve their efficiency and profitability. We have been collaborating on this with the Agricultural Business Research Institute (ABRI), and we hope to roll this out shortly.

We look forward to the rollout of ILR Online, which will take place gradually over the next 12 months. The new system being brought out by ABRI will see a more user-friendly database, allowing us to become more efficient in terms of labour use in the office, with more automation and flexibility than the current system we all use today. It will also make it easier to look at new types of data to record, such as docility, feet, legs, teats and udders. We hope that ILR Online should also help the development of the Maternal Efficiency List – the project we are working on in line with the Pathfinder Programme in the USA.

We have had preliminary discussions with AHDB about collaborating on a feed efficiency project. The aim would be to gain funding from DEFRA, allowing us to gather the data required to formulate an Aberdeen-Angus feed efficiency EBV. Feed efficiency is such a hot topic. With input costs rising daily, it makes sense to investigate this further.

We welcome Natalie Cormack as Breed Development Manager, bringing a wealth of knowledge and experience, which will be a great asset to the Committee and the breed. I am very grateful for the support from the Society staff and the members of the Breed Development Committee for their valuable input over the past year. We are always looking for projects to develop, so please contact us if there is anything you would like us to work on.

Duncan Morrison
Chair of the Breed Development Committee
New marketing initiatives launched for breed in 2022

When reviewing the past year, we looked at what worked well for us and what didn’t. For this, we rely on feedback and suggestions from members to help us make future decisions.

Last year the Society embarked on a spring marketing campaign. This initiative involved the placement of print and digital adverts across the UK during April, May and June, targeting the primary selling months of the year for our members. In addition, some promotional videos were produced and will be used as part of the marketing for this year’s spring sales, highlighting ‘The Aberdeen-Angus Advantage’.

With the return to some normality and more shows and events throughout the UK recommencing, the Committee decided to bring back our commercial brochure “The Angus” as a more user-friendly means of a show handout aimed at the commercial producer. The Angus will be updated annually with new case studies from dairy, beef, suckler and retail producers using the Aberdeen-Angus breed to their advantage. Throughout the year, we try and gather a bank of case studies. If any member feels they know of a willing, suitable candidate for a case study, please get in touch.

2022 also saw the launch of our dissertation competition, which we will continue this year. There are more details later in this Review about the 2022 winners.

I want to thank the team at Pinstone, this year’s Marketing Committee members and the staff at Pedigree House. I especially want to thank Robert and Emily for their assistance and work throughout the year and last year’s Committee Chair, Chris Wilkinson, for his advice and help in ensuring a smooth transition to keep the continuity between the changing councils.

Alan Morrison
Chair of Marketing Committee

Registrations Committee

The Registration Committee and staff have worked tirelessly to speed up the registration process with some success. This is primarily due to improved office procedures. At the time of writing, we are up-to-date.

Speeding up registrations means we are already £38,000 ahead year-on-year due to the office having processed more registrations with no backlog.

Improvements have been seen concerning the number of DNA testing failures, with the replacement Caisley tags performing better than their predecessor. However, failures continue to be problematic for both members and the office, with many hours spent resolving problems, which is frustrating for all concerned.

While short-store samples are still a cause for concern, it is the long-store samples, mainly first-calved heifers and stock bulls initially processed on the low-density test, that are time-consuming and frustrating for all and expensive to resolve. The retesting of stock bulls will be resolved in time as all current potential stock bulls are now on the high-density analysis.

To reduce the problems with first-calved heifers, from this year, members will be asked to nominate heifers going into the breeding herd, e.g. in the case of spring-calvers, all heifers going to be mated should be verified as soon as possible after weaning, preferably while still housed.

This will give the breeder important information regarding the animal’s parentage, for example, Myostatin. Autumn-calving heifers should be nominated when selected. Any failures from stored tissue as per spring-born heifers will be easier to resolve as, hopefully, the animal will still be housed and available for a retest.

Knowing the animal’s parentage should be beneficial when making breeding decisions. Sire exclusions are also frustrating for the office, with around 15% of registrations returning with the incorrect sire. The registrations department does send out information on animals that have failed on this both by paper and email. Responding to this as soon as it is received reduces backlogs in the office.

At the October Council meeting, it was proposed and agreed that members should pay for DNA testing of breeding heifers at cost price. Any late developers can, of course, be processed at a later date or earlier.

To reduce DNA costs, we will ask members to nominate potential breeding bulls for DNA analysis when decisions have been made regarding their suitability. We are currently analysing tissue from all bulls at a considerable cost to the Society, with a large percentage going into the food chain. As with the heifers, earlier or later verification can be done.

DNA costs must be reduced, and I would ask all members to seriously assess all animals before nomination to reduce costs and improve the failure rate.

Members will receive a communication from the Society regarding the process. Hopefully, it will already have happened by the time you read this.

ILR online is being accessed as I write this report and should be rolled out for registration during the first quarter of 2023. The system offers members a more direct registration facility, with downloading facilities becoming available in time. The facility can also take payment by credit card, reducing office time.

Improving the registration process and reducing Society costs have been the focus of the Registration Committee. However, the Society’s expenses, like every other business, continue to rise and must be covered.

Calf registration was last increased in 1998, so to cover increased costs, the Council has voted to add £5 to the cost of calf registration, taking it to £30 plus VAT for all animals registered online from 01/01/2023.

The Registration Committee and all the staff are fully committed to improvement and will continue to make this their number one objective.

Ian Watson
Chair of Registrations Committee

www.aberdeen-angus.co.uk
Our predictions in last year’s Review article have proved to be mainly on the mark, stating that more challenges were to be expected in 2022 for the Society, despite its finances being on a positive path.

Challenges came thicker and faster for everyone in the UK and for Aberdeen-Angus breeders than we may have wished! For the Society, some of the challenges included:

- Falling global stock markets, which materially reversed the Society’s investment portfolio gains over the past few years.
- Clearing registration backlogs at Pedigree House caused by Covid.
- Picking our way through genotyping and developing a further understanding of its longer-term benefits and what can’t be presently achieved or afforded with this powerful breeding tool.
- Quantifying the ongoing impact of genotyping on the finances of the Society if nothing were to change, and realising that steering a new course was necessary to ensure the positive outcomes of late were not squandered and instead built upon.
- Inflation.

With active stewardship, our normal Society trading at the time of writing is expected to show a small surplus once again in the year ending October 2022. This is a testament to the Council’s focus on proactively meeting and overcoming the challenges as they presented themselves.

Our wholly owned subsidiary, Pedigree Cattle Services Ltd, found itself particularly exposed to the challenges of the UK economy in 2021/22. This meant lower dividends being passed back to the Society, coupled with a falling national beef herd and tough retail conditions. Combine this with the substantially higher yearly genotyping costs (as the Covid-induced backlog was cleared), all being met by the Society rather than breeders, then inevitably, the drawdown has been substantial from some of those recent investment gains made within unreserved investment funds.

With no short-term reduction on the call on unreserved funds likely, the Council and relevant Committees were required to, and shall continue to, consider and take actions regarding how the Society balances the books in the short to medium-term. This is while seeing through the objectives set and restated by successive Councils, which will enhance the breed’s appeal and standing in the industry.

The Council noted many positives reported to it in 2021/22, such as:

- Aberdeen-Angus cross registrations at BCMS continued to rise, leading to pedigree registration income holding up for the Society.
- The appointment of a new CEO, who started his tenure with purpose and integrated seamlessly. A steady ship makes for easier financial stewardship.
- The foresight to take out a fixed-price energy contract until 2023, well before the major price hikes.

Nevertheless, 2023 will likely throw as many, if not more challenges at the Society (as it will for us all), but rest assured, the Council is mindful of their duty and responsibilities to continue to see the charity prosper and the Aberdeen-Angus thrive as a breed.

Finally, as Chair of the Finance Committee, I thank and recognise the constant work and effort made by staff at Pedigree House and the many unpaid helpers who help make my job as Committee Chair easier.

All this endeavour has one common purpose. This is to create a resilient Society fit to meet future challenges, serve all within our charity efficiently, maintain and protect the integrity of our wonderful breed and promote the breeding of Aberdeen-Angus cattle.

Matthew Currie
Chair of Finance Committee
It was great to see the shows returning to normal post-pandemic, and what a summer it was! Dry and sunny weather attracted many visitors to view the exceptional display of Angus cattle all over the country.

The Highland Show was a great event and it was encouraging to see so many entries, with exhibitors coming from far and wide to compete at this prestigious show. The Great Yorkshire Show was also incredibly well attended. The cattle displayed were a credit to the exhibitors.

A special mention must go to the Summer National at Norfolk, with exhibitors coming from all over the UK to compete and make the event something special. This coming year, the Summer National will head up to the North-East of Scotland at Turriff, and I am sure it will also be equally well attended.

Stirling sales in February marked an incredible moment for the breed when we witnessed the centre breed record of 28,000gns smashed not once but twice. The new record belongs to the Massie family producing a top price of 38,000gns, which was purchased by Wedderlie. This was a momentous achievement following the record-breaking Bleack dispersal the year before.

Second to break the record was the Clark family at Duncanziemere, selling Duncanziemere Jacobite for 30,000gns.

The sale overall proved that Aberdeen-Angus bulls are still in high demand with an average of £6,633, up £34 on the year, with 95 bulls sold. Hopefully an inspiring indication of what the future holds for Aberdeen-Angus breeders.

The Carlisle May bull sale saw an 86% clearance, with 51 Aberdeen-Angus bulls finding new homes to an average of £4,869, 12, up £497 on the year, with the sale topping at 30,000gns.

In addition to the above, we have endeavoured to make sales easier for vendors with herd health declarations. We are happy to announce that the herd health declaration will shortly be available online, removing the need to print, fill out and scan. We hope this will reduce the late returns and speed up the process in the office.

The late return of health declaration forms is a significant factor in delaying sale entry and cataloguing. Just a reminder that herd health declarations are due with sale entries and by the sale entry deadline. These should be forwarded to the AACS office by email. If tested the animal’s individual test result must be shown and if vaccinated the details must be completed.

INFEKTISHON BOVINE RHINOTRACHEITIS (IBR) INITIATIVE

A significant aspect of our work over the past year has been looking into the presence of IBR at bull sales. Helping to protect and advise the membership on the various risks associated with purchasing from the mart is our priority. A significant aspect of our work over the past year has been looking into the presence of IBR at bull sales. Helping to protect and advise the membership on the various risks associated with purchasing from the mart is our priority.

In October 2022, the Council passed a proposal containing the following:

- All bulls entered into official Society sales must be pre-movement tested with a health scheme provider and the results must be displayed on health sale cards. For timescale, health and pen cards can be ordered up to three months before the sale date. This allows ample time to screen individual animals for IBR.

- Animals vaccinated before the blood test must display vaccination dates and vaccine type on the health card.

- The use of IBR Marker vaccines is encouraged to distinguish between vaccination and infection.

- Animals that receive a positive antibody result, but have not been marker vaccinated, must be fully vaccinated pre-movement to reduce the risk of the animal shedding the disease at the mart and also to reduce the risk of infecting an IBR naive herd.

- Animals that test negative for IBR can enter the sale unvaccinated, but this is at the vendor’s/purchaser’s risk. Therefore, we encourage vendors to vaccinate with an IBR marker vaccine before the sale date. Again, vaccination date and type must be provided on the pen health cards (see the health test checklist on page 65 and 66).

Initially, we are recommending this practice for this year’s February bull sales at Strirling. Following the spring 2023 sale season, this initiative will become mandatory for vendors entering all Society sales (both males and led females).

INFORMATION FOR PURCHASERS

- Actual individual testing information will be displayed on the health card. This should be taken into consideration before purchase along with the herd declaration. IBR status must be made an informed decision of risk.

- IBR-positive animals must be vaccinated before the sale; however, it is impossible to prove vaccination in antibody-positive animals that have been previously infected with the disease. Therefore, it is recommended that if an antibody-positive animal is purchased, it is isolated on arrival to the farm and vaccinated against IBR for complete assurance.

- The Society has adopted this initiative to reduce the risk of transfer of IBR by selling animals. It is hoped that this will allow purchasers to make more informed decisions. The AACS, however, provide no assurances about the health results being provided.

- The late return of health declaration forms is a significant factor in delaying sale entry and cataloguing. Just a reminder that herd health declarations are due with sale entries and by the sale entry deadline. These should be forwarded to the AACS office by email.

- If tested the animal’s individual test result must be shown and if vaccinated the details must be completed.

- Every animal must have the risk level of the herd shown in the box. Non-home bred animals have no details in the John’s box.

Daniel Whiteford, Chair of Shows and Sales Committee
### CHeCS Health Scheme Requirements

**Minimum Health Testing**

- **BVD accredited herds**
  - No - Individual test optional
  - Must be vaccinated to cover period of sale. 
  - The herd accredited box and vaccination details box must be completed.

- **Non BVD accredited herds**
  - Must be part of the health scheme and be testing for a minimum of 12 months.
  - Yes - Antigen
  - Must be vaccinated to cover period of sale. 
  - The herd accredited box and vaccination details box must be completed.

- **Lepto accredited herds**
  - No - Individual test optional
  - The herds individual test result must be shown and vaccination details must be completed.

- **Lepto non-accredited herds**
  - No - Individual test optional
  - The herds individual test result must be shown and vaccination details must be completed.

**Recommended Vaccination**

- **BVD accredited herds**
  - Optional - but marker vaccine recommended

- **IBR accredited herds**
  - Yes - Antibody

- **IBR non-accredited herds**
  - Yes - Antibody

- **Lepto accredited herds**
  - No - Individual test optional

- **Lepto non-accredited herds**
  - No - Individual test optional

**Johne’s Disease**

- Must have the risk level of the herd shown in the box. 
- Non home-bred animals have no details in the Johne’s box.

**TB (Mandatory)**

- **Any herd**
  - Date of last test
  - The date of the last test and the TB testing interval must be completed.

**Pre-Entry Requirements**

- **BVD accredited herds**
  - No - Individual test optional

- **Non BVD accredited herds**
  - Must be part of the health scheme and be testing for a minimum of 12 months.

- **Lepto accredited herds**
  - No - Individual test optional

Breeding for superior beef Meat Eating Quality (MEQ)

In 2021, the second largest category for Irish food and drink exports was beef. This was an increase of 9% on the previous year and had an estimated worth of €2.1 billion to the Irish economy. This growth was driven by strong demand by consumers for quality beef products, predominantly in the UK and EU markets. Although beef exports in Ireland have been going in the right direction, this growth is in contrast to the reported trends across the EU, where beef consumption is declining in comparison to pork and chicken alternatives.

Meat eating quality (MEQ) impacts repeat purchases; this is particularly important for beef which is often more variable in quality than many other meat types. Various sensory signs - such as colour, appearance, tenderness, juiciness and flavour - guide consumer decisions to purchase beef.

UK retailer research found that if a consumer had a negative experience eating beef, it would be six weeks before they purchased it again. Therefore, it is critical to develop systems to help improve the eating quality attributes of beef for the traits that are of value to the consumer. Selective breeding has been proven to improve these traits - most notably tenderness, juiciness and flavour.

MEQ DATA COLLECTION

Accurate genetic evaluations for eating quality are centred on a large database of eating quality data in Ireland. Eating quality data now exists on tenderness, juiciness and flavour scores from trained sensory panelists. Trained panelists are experts in quantifying the sensory characteristics of the steak, more so than the average consumer.

All steaks originate from the same standard operating procedure at slaughter and sensory assessment. Forty-eight hours post-mortem, after hanging, striploin steaks are taken. All samples are aged for 21 days at 4°C before being held at -20°C prior to sensory analysis. Cooked steaks are cut into small portions and presented to each panelist while warm; several trained panelists then score each steak. Each steak sample is scored for tenderness, juiciness and flavour on a one to nine scale, where a score of one represents very tough, not juicy, and no beef flavour, respectively.

GENETIC EVALUATIONS

Typically, breeding programmes focus on marbling percentage or intramuscular fat when it comes to measures for eating quality. However, research shows that meat quality encompasses a multitude of factors - most notably meat tenderness, juiciness, chewiness, and flavour (Berry et al., 2021; Judge et al., 2021).

Currently, the Irish Cattle Breeding Federation (ICBF) runs a multi-breed genomic evaluation using trained sensory panelists for the meat eating quality traits directly related to the consumer experience. This type of evaluation is a ‘world first’ and the database behind it is the single largest database of its kind in the world. It now has over 7,000 animals with meat eating quality data and some 2.5 million animals in the entire database, 1.2m of which are genotyped.

The MEQ evaluation combines pedigree and DNA information, along with other information such as animal gender and the herd of origin to generate genetic evaluations on the three MEQ traits of importance; tenderness, juiciness and flavour.

The resulting genetic evaluations are transformed to an expected satisfaction rating of the progeny from a given sire. The average expected rating for each trait is 80% (i.e. 80% of the progeny are expected to have satisfactory tenderness, flavour and juiciness scores). Sires higher than this are expected to produce progeny with superior meat quality for the relevant traits. The range in average satisfaction values across AI sires with published evaluations (September 2020) is 70% to 95%, with an average of 80%. While clear breed differences exist (Figure 1), of crucial importance is the variability in meat-eating quality that exists within breeds.

MEQ OPPORTUNITIES

Currently, meat eating quality evaluations are presented as stand-alone traits (i.e., they are not included in the Replacement, Terminal or Dairy Beef index). Further work, such as the calculation of economic values for these traits, including the potential to include traits directly into the Euro-Star Replacement, Terminal and Dairy Beef indexes, is now underway. In addition to this, new evaluations will be made available which will include MEQ proofs on all animals in the database. This includes young breeding bulls but also potentially animals going to slaughter. In time, it is anticipated that an animal’s genetic/genomic evaluation for MEQ traits could be used to streamline different animals/carcasses into different value streams within the supply chain. These developments all contribute to the ultimate goal of further enhancing the delivery of Irish beef to global consumers.

Aberdeen-Angus:
Beef fit for the future
Careful genetic selection helps Warwickshire beef farmer protect himself from rising input costs

Having discovered the capabilities of a spreadsheet, third-generation livestock farmer Adam Quinney has become passionate about utilising data to maximise the efficiency of his family’s beef and sheep farm.

Mr Quinney farms 150ha of grassland at Reins Farm near Stratford-upon-Avon, comprising multiple tenancies. The business currently includes 100 Salers x Aberdeen-Angus suckler cows and 120 sheep, managed within a low input, high efficiency system.

He aims to finish the cattle at 22-24 months of age at an average deadweight of 350kg, with the majority processed by ABP. The cattle are finished on a predominantly grass-based diet, facilitated by the easy fleshing traits of the Aberdeen-Angus, which suit Mr Quinney’s low input goals for his business.

This system has allowed the farm to maintain healthy margins, despite the challenges of rising input costs faced by the industry.

“The target is to keep our inputs to a minimum wherever possible, which is why we introduced Aberdeen-Angus genetics into the herd around 10 years ago. We aim for about three-quarters Salers and one-quarter Aberdeen-Angus. This combination helps the cows maintain winter cover and supports easy calving,” Mr Quinney says.

HANDSFREE CATTLE
Mr Quinney says calving ease is vital to ensure cows get back in-calf promptly. “I’m not interested in keeping stragglers, every cow needs to deliver value for the business, and that’s increasingly important in the current climate.

“Everything we do needs to be economically viable and wherever possible, I want my cattle to be ‘handsfree’. The strong maternal traits of the Aberdeen-Angus have helped with this,” he explains.

USING EBVS
To make informed decisions, Mr Quinney uses estimated breeding values (EBVs) when selecting bulls for his herd, with calving ease and mothering ability high on the list of priorities.

“We’ve been buying bulls from the same high-health status herd for over 10 years, which is hugely advantageous as the breeder has got to know exactly what I’m looking for. We also breed all our own replacements because we want heifers that suit our farm and management style,” says Mr Quinney.

Breeding heifers are selected based on a vet assessment, which he explains helps to whittle down potential replacements by nearly a third.

“The vet pelvic scores the potential replacement heifers, to help select for easy calving as we aim to calve all of our heifers at 24 months.

“I’ve not had to calve a cow for five years except for one set of tangled up twins a couple of years ago, which is a real triumph,” explains Mr Quinney.

“Last season, we successfully reared 103 calves out of 100 cows, which cements to me that we are doing something right,” he adds.

A CLOSE EYE ON COSTS
Despite rising input costs, Mr Quinney has kept his costs per reared calf constant. “The cost to rear a calf up to weaning for us is just over £600 per year,” he says. “We’ve been able to keep this pretty stable as our fertiliser and concentrate use is minimal, which has meant we’re not as exposed to these astronomical input costs.”

Maintaining stocking density has helped to spread the fixed costs: “55% of the cost is overheads; if we started to cut numbers, this would rise,” says Mr Quinney. “As we’re reliant on rented ground, we could potentially find ourselves in this position if one of our landlords decides to take back land, but ultimately, we don’t want to drop below 100 cows if we can help it as our current system works well for us.”

USING EBVS

- EBVs used to select bulls with a focus on calving ease and mothering ability.
- All potential replacements pelvic scored by a vet.
- DLWG of around 1kg on a winter ration of high-quality home-grown forage.

REINS FARM FACTS

- 100 Salers x Aberdeen-Angus suckler cows, 120 sheep
- 150ha of grassland. Some set-stocked and land closer to the farm paddock grazed
- EBVs used to select bulls with a focus on calving ease and mothering ability.
- All potential replacements pelvic scored by a vet.
- DLWG of around 1.8-2kg on a winter ration of high-quality home-grown forage.

Winter rations are sometimes supplemented with by-products such as brewers’ grains and potatoes, depending on the price.

Handsfree cattle
- The cattle flesh well, and we aim for a daily liveweight gain (DLWG) of around 1kg off grass in the summer.
- When the cattle transition onto winter diets, we expect growth rates to dip temporarily, but by feeding a high-quality home-grown forage as our core ration over the winter, cattle can gain around 1.8-2kg a day.

A CLOSE EYE ON COSTS

- Despite rising input costs, Mr Quinney has kept his costs per reared calf constant. “The cost to rear a calf up to weaning for us is just over £600 per year,” he says. “We’ve been able to keep this pretty stable as our fertiliser and concentrate use is minimal, which has meant we’re not as exposed to these astronomical input costs.”

Maintaining stocking density has helped to spread the fixed costs: “55% of the cost is overheads; if we started to cut numbers, this would rise,” says Mr Quinney. “As we’re reliant on rented ground, we could potentially find ourselves in this position if one of our landlords decides to take back land, but ultimately, we don’t want to drop below 100 cows if we can help it as our current system works well for us.”

Winter rations are sometimes supplemented with by-products such as brewers’ grains and potatoes, depending on the price.

The Aberdeen-Angus breed makes up a quarter of all cattle registered in the UK and pushes the breed to the top of the BCMS registration results, according to the latest figures. In 2021, 471,528 Aberdeen-Angus were registered across the year, a 4.5% growth in market share since 2018, with 24.41% of all registrations Aberdeen-Angus.

Robert Gilchrist, CEO of The Aberdeen-Angus Cattle Society, is delighted the breed is leading the way in beef production. He puts the success down to breed promotion and changing beef and dairy supply chains that value native breeds.

He says: “Having the largest membership of any UK beef breed society, topping the BCMS table is something we’ve had our sights set on for the last few years and we are pleased to have achieved this. It’s widely documented that British agriculture is facing the biggest changes and challenges in over 50 years. Farmers are being met with a reduction of BPS payments alongside mounting consumer pressure to produce sustainable beef that benefits the environment.

“This has brought into focus for farmers more than ever, the need to have an efficient and viable business, and much of this is down to genetics and the breed they focus on to meet the market demands of today’s consumers,” he says.

Mr Gilchrist adds: “The Society has been promoting the benefits of the breed to beef producers in terms of sustainability for some years. We’re now starting to reap the rewards with the number of Aberdeen-Angus cattle registered within the UK.

“We have a beef herd book to be proud of, but there is also major opportunity within the dairy sector for our Aberdeen-Angus genetics.”

Mr Gilchrist says Aberdeen-Angus traits such as easy calving, high calf vigour and low input finishing are attractive qualities that can help ensure every calf is reared to suit dairy systems, but with the end beef market in focus.

“There is no doubt that with an increasing focus on business viability and sustainability credentials, Aberdeen-Angus will continue to be the number one breed able to produce beef fit for the future,” Mr Gilchrist says.
What does the UK beef market have in store as cattle prices and input costs soar?

The UK beef market has been dominated by highs – both in farmgate prices and input costs – in the past 12-18 months. Representatives from farm levy bodies across the country reflect on this period of highs.

Beef farmers across the UK witnessed a strong trade for their cattle throughout much of 2022, with prime cattle prices around 50% higher than the lows of 2019. For example, figures from the Agriculture and Horticulture Development Board (AHDB) showed the average GB prime cattle price for the week ending September 10, 2022, was 435.6p/kg – up 66.7p on the five-year average and 26p/kg higher than the five-year average and 59p/kg ahead of the same week in 2021.

“After rebalancing higher in 2020, again in 2021 and finally last year, prime cattle prices are around 30% higher than the lows of 2019,” explains Quality Meat Scotland’s (QMS) Market Intelligence Manager, Ian Macdonald.

He adds: “By contrast, there were declines of 18% for Limousin and Simmental and a 20% decline for Charolais between 2015 and 2021, while the fall for black and white dairy breeds was closer to 21%.”

Imports/Exports

Both imports and exports of fresh and frozen beef increased throughout 2022. However, this needs to be interpreted against the backdrop of a lower trading level in the first quarter of 2021 immediately after Brexit, explains Ms Clarke.

She says data for the first seven months of 2022 showed a 10% increase in beef imports, driven largely by increased supplies from places like Poland and Germany. Mr Macdonald says: “Beef export performance at the UK level was very strong in 2022, reaching an 11-year high.

“It was supported by firm demand from the EU, where market prices rose despite supply-side indicators pointing to little change in the volume of beef available for consumption.

“Total UK export volumes rose by 36% in the first seven months of 2022, with a 67% uplift to EU markets, while trade with non-EU countries fell back.”

And in Northern Ireland, the trading of beef carcasses and products has continued to work well following Brexit, says Mr Stevenson.

He explains: “We produce about 150,000 tonnes of beef a year from our domestic slaughter, but the processing sector brings in another 100,000 tonnes of beef for further processing, mainly from Great Britain and the Republic of Ireland.

“The processing sector, from what I can understand, has their arrangements well in place for taking that product in from GB under the current protocol operating arrangements and shipping it back to GB or into export markets.

“There are challenges and future concerns, it’s primarily in other important raw materials for farming that are moving from GB to Northern Ireland, like veterinary medicines and livestock movements.”

Consumer Demand

High grocery inflation began to have a significant impact on consumer demand for beef as 2022 progressed, according to Hybu Cig Cymru data analyst Glesni Phillips.

She says: “Shoppers are looking to trade down into cheaper products and for red meat, this results in a mix of buying cheaper cuts within the category, as well as buying cheaper proteins altogether.

“Data from Kantar suggests consumers are prioritising value during the cost-of-living crisis, but also still using the out-of-home market to treat themselves, albeit less often.”

Mr Macdonald says households switching from more expensive products like steak to cheaper products like mince could have implications for carcase balance.

He adds: “However, government support to limit energy cost increases should at least limit the scale of the squeeze on disposable income.”

Outlook for 2023

Looking at the year ahead, Ms Clarke says AHDB estimates suggest there could be a slight increase in beef production this year.

This is based on cattle population figures and trends in calf registrations in recent years. And while the domestic market may be less buoyant, Ms Phillips says the weak pound is contributing to a stronger export trade market for UK beef.

She says: “As supplies of beef in many key producing countries are static at best, there is the global demand present to give grounds for optimism to farmers over the next year.”
Aberdeen-Angus cattle that meet the requirements of his butchery business and extensive farming system. Mr Grierson runs a mixed farm in eastern Scotland, where he has his own butchery. The farm achieved organic status in 2000 and is certified ‘Pasture For Life’, meaning the cows and sheep are fed no grains or concentrates, just grass and silage.

The breed of choice is Aberdeen-Angus, chosen by Mr Grierson for their breeding credentials, including hardness and ability to thrive on a grass-fed system. The herd consists of 120 animals who are outwintered and calved mostly in the spring, with 20 calving in September to keep an autumn supply of two-year-old cattle for the butchery.

“The Aberdeen-Angus breed allows us to produce a consistent meat quality for a premium market,” he explains. “We need low-cost and easy animals to rear while producing tasty, juicy, and tender meat. “Our breeding programme and using EBVs has helped us be selective regarding genetics to get that quality right across our herd. The breed and our organic status are a big selling point for our meat,” Mr Grierson adds.

Mr Grierson retains 20 to 30 heifers each year, calving them down at two-years-old. Poorer quality cows are culled, and 30 of the best animals are served to AI. All animals born are performance tested using Breedplan - a genetic evaluation system used by The Aberdeen-Angus Cattle Society to gauge the potential of animals to show certain traits. "Performance testing through Breedplan isn’t much extra work. We’ve been using the system for 12 years,” says Mr Grierson.

“We measure the weight of newborn calves when they’re caught for tagging and then weigh them in the autumn and spring. The only extra handling is rounding up the yearlings for ultrasound scanning, but it is well worth it as it provides us with the data to understand the carcase merit for that animal.”

Mr Grierson uses Breedplan to target annual improvements in whole herd performance, rather than producing individual stellar animals. "My main focus is following the progress of my whole herd and benchmarking,” he adds.

MEETING MARKET REQUIREMENTS

The years of testing and selecting now mean that we deliver reliable, consistent carcases, as required by the butcher, and more importantly, by the consumer.”

CREATING BEEF FIT FOR THE FUTURE

The environmental impact of red meat production is never far from the industry’s thoughts. Choosing a system and breed that reduces greenhouse gas emissions and is based on forage has aligned Mr Grierson’s farm with this vision. "Breeding for efficiency and carcase quality enables us to produce meat which meets the consumer’s demands for both taste and sustainability. The Aberdeen-Angus breed fits in with the carbon-friendly credentials by utilising naturally grown grass to produce food,” he says.

“Our cattle allow us to produce food and protect the environment, and I believe that using ruminants on natural grassland, which can’t be used for anything else, is the way forward.”

According to Robert Gilchrist, CEO of The Aberdeen-Angus Society, genetic evaluation is key to producing beef fit for the future.

“With new payment support regimes coming in and margins getting tighter, beef producers will have to explore all avenues to maximise outputs and reduce costs,” he says.

“Breedplan is one of many tools available to farmers and should be considered in tandem with other tools. Data is vital to any farm business now to ensure they can track progress and benchmark performance.

“It’s a great way for farmers to get under the skin of their animals and see what’s actually happening. For example, you could rear two animals that appear exactly the same, however, they’d have very different performances if their EBVs are different.”

By using EBVs, Mr Gilchrist says producers can make the best breeding decisions for their business. "It’s not necessarily about selecting animals which are maximum on all parameters; you need to select for a balanced and productive animal," he says.

He adds that using EBVs can help farmers produce an animal that suits the end market, aligning traits with consumer demand and also marketing beef in a positive way. He stresses that the traits chosen will vary between farms.

“The ideal traits may not be the same on all farms, and there needs to be a balance across traits,” adds Mr Gilchrist.

“It’s also important to remember that while EBVs play a big part, management also impacts performance. If it is incorrect, then animal performance may still not be optimal.”

What is Breedplan?

Developed in Australia, Breedplan is a genetic evaluation system used by The Aberdeen-Angus Cattle Society to gauge the potential of animals to show certain traits. Based on performance recording and measured using EBVs, the system helps farmers breed animals best suited to their business and market, increasing efficiency.

Farm facts:

- Nevislin Farm
- 324ha (800 acres)
- 120 cows and 400 heifers
- Target EBI for the beef system
- Zero assists at calving
- Visible marbling in every silo
- 100% 400kg steer carcases at two-years-old
- Wintered outdoors on grass and silage diet (no heed)
- 650kg cow size
Aberdeen-Angus ideally suited to conservation grazing conditions in County Down

Formed National Beef Association NI and UK chairman, Oisin Murnion, farms a pedigree and commercial suckler enterprise over 283ha (700 acres) of high nature value land in partnership with his wife Anne-Marie, and daughter Jolene Burns.

Oisin, a pioneer in conservation grazing in Northern Ireland, farms land primarily designated as ASSI (Area of Special Scientific Interest). This land is monitored to protect and safeguard various species, habitats and geological features.

The land is all within a 30-mile radius of the home farm and is split across several locations at Ballykinler, Glenshane, the Mourne Mountains, Downpatrick, Paul Island and Taggart Island in Strangford Lough.

"Most of the land we farm is species-rich pasture and heather-rich moorland, surrounded by sand dunes and coastal landscapes," he says. "These are long-studied sites with a large variety of flora and fauna, and it's interesting to note that the Ballykinler area is home to the Marsh Fritillary butterfly, a very rare and protected species."

He adds: "As custodians of the land, we are governed by various restrictions and regulations such as low-density stocking rates (one cow per five acres). We're not permitted to sow artificial fertilizer or use supplementary feeding."

The main enterprises include 100 commercial suckler cows plus followers, 100 ewes and 200 hoggets, which are mainly Lanark and Perth-type Blackface, and a small herd of pedigree Aberdeen-Angus cattle registered under the Glenloughan prefix.

The pedigree venture was established in 2020 with the purchase of foundation females from John McCallister's Glasker herd and the Dartrey herd owned by Hylde Mills at Scarva. The herd has grown to 10 breeding females and includes daughters of bulls such as Logie Lustre F473, Nightingale Proud Jake G405, Luddenmore King Kong S273 and Dartrey Elliott S467.

The environmental sensitivity of the land is more suited to native breed cattle. "The cattle and sheep are outwintered, so we must have hardy breeds that can withstand the rough terrain and the inclement winter weather," adds Oisin. "There is land as far as the eye can see, and the contours of the ground and the natural flora provide shelter for the animals in cold and hot weather."

Oisin, Anne-Marie and Jolene initially had a herd of black Galloway cattle, which are well-known for their ability to forage and survive on marginal land and inhospitable climates. The breeding programme focused on crossing with native bulls, resulting in a herd of Angus/Shorthorn/Galloway cows.

"We bought our first Aberdeen-Angus bull in 2011," recalls Oisin. "I like a long, stretchy stock bull with breed character and good legs and feet."

Bulls have been purchased over the years from leading herds such as Liss, Glasker, Yellowhill and Leestone. They were sons of proven Angus bulls Burlahy Kojak, Dartrey Richie, and Birchles Lord John.

"The Aberdeen-Angus epitomises everything we want in a suckler cow, and around 90% of the herd is now predominately Angus-bred," says Oisin. "Medium-sized cows are ideally suited to the conditions. They are fertile, easy calving and have excellent maternal qualities, which are essential traits when they are mostly isolated and self-sufficient."

He adds: "Spread over such a vast area, we can't be on hand when cows are calving. It's survival of the fittest, and the Aberdeen-Angus is an easy fleshing, healthy and hardy breed with the ability to survive on a low input system."

"The cows calve all year round, but more than half the herd is spring-calving. They have a lovely temperament and plenty of milk to rear their calf. The breed's naturally polled characteristics are another advantage in a herd of 'free-range' cattle."

Calves are weaned around seven or eight-months-old age. The best heifer calves are retained and reared as suckler replacements, while the bull calves are grazed and outwintered on one of the islands in Strangford Lough.

Oisin has established a ready demand from repeat customers at Markethill Mart and Rathfriland Co-op. The Angus progeny are sold as forward stores. Ranging in age from 15 and 20 months old, they can command prices from £900 to £1,500 per head.

"Aberdeen-Angus beef is a niche market product, and the premium makes it attractive for beef finishers," says Oisin. "Now and again, depending on trade and if we need to maintain cash flow, we sell a batch of weaned bull calves. They attract prices of around £500 to £700 per head, which is very profitable considering they haven't had the luxury of expensive creep feed."

Cull cows and bulls are also saleable, adds Oisin. "Longevity isn't an issue. Aberdeen-Angus cows and bulls lead long, productive lives. We wouldn't keep a suckler cow over 15-years-old, and we recently sold a nine-year-old stock bull. He weighed 493kgs dead and graded R3."
AB Europe offers farmers professional and latest reproductive breeding technologies to maximise and accelerate genetic gain from their superior cows.

Cattle IVP services
AB Europe offers farmers professional and reliable services as well as access to the latest reproductive breeding technologies to maximise and accelerate genetic gain from their superior cows.

Cattle breeders seeking to improve their herd’s genetic potential are introducing In-Vitro Embryo Production (IVP), a cost-effective service from specialist artificial breeding technology company, AB Europe. "IVP is a widely used method globally for producing embryos where it outcompetes MOET for its flexibility and multiple benefits to breeders and their donor animals," explains AB Europe’s vet, Gavin Tait.

The process produces embryos from collected oocytes which are fertilised within a petri dish by selected semen and subsequently cultured for seven days until the fully developed embryos can be transferred or frozen. William Moses is one of the Aberdeen-Angus breeders reaping IVP’s rewards.

Angus had played an increasing role over a decade at Challoch Farms, Newton Stewart, before William took the decision to establish his own pedigree herd.

"I always had an interest in the breed. The first decision I was allowed to make when I returned home to farm in 2008 was to swap our suckler herd’s Limousin bull for Angus and we’ve never looked back," explains William who manages the traditional family farming business looking after 4,500 acres of both lowland and hill permanent pasture.

"We’ve adopted a low input forage-based strategy and Angus genetics perfectly fit; they have also improved temperament, the calves are easier fleshed and we’re able to retain our own heifer replacements in what’s developed to become a Black Baldy suckler herd of Angus cross Herefords. We currently have 200 cows with plans to reach 250 cows in two years time."

While the commercial herd evolved, William began to study quality Angus breeding lines before deciding to start breeding his own bulls. The Challoch prefix was registered in 2018 and has rapidly grown.

"Our preference is to maintain herd size, our focus is on breeding high genetic merit cattle, selecting for eye muscle and retail beef yield without sacrificing gestation length or fertility," says William. He explains how IVP began to help him to fast track his plans after becoming aware of Gavin Tait’s level of professionalism and enthusiasm for the process, as well as a recommendation from Sandy Watt, Swordale herd.

A couple of separate enquiries for two of the Weeton cows hit the touch paper, and in 2021 they were amongst the first three Challoch females to undergo IVP followed by a further three cows in 2022.

"We decided to leave the entire IVP process to the professionals and opt for AB Europe’s livery offer based on Gavin Tait’s farm. The donors came straight off grass and into the trailer, the oocytes were collected while at livery and fertilised. We averaged 12 embryos per flush, 70 went into the tank and were frozen using vitrification; the majority were grade 1."

"We managed our Black Baldy maiden heifer recipients – they were maintained in the same social groups from spring turn out and CIDR synched at grazing. The AB Europe team came over to Challoch with the frozen embryos, implanted 17 in the recipients and we achieved a 70% hold rate. I’ve already sold 10 embryos in Stirling and the remainder are in the tank. Success is testimony to our females’ fertility and to AB Europe’s service."

"Freezing the embryos provides flexibility; it enabled us to implant earlier the following summer, ensuring timed spring calving and allowing recipient synchronisation to fit between baling and hill shearing. Freezing also provides longer term storage for future implantations. The last week of April 2023 is going to be very exciting at Challoch,“ he says.

IVP requires less semen per fertilisation, so multiple donors can be fertilised with a single straw. Furthermore, different bulls can be introduced. Both Blelack Duke and Blelack Lord Heartford have been used over Challoch oocytes. Duke within the breeds top 5% for eye muscle and Heartford in the top 5% for 200, 400 and 600-day growth.

William adds: "IVP has helped to influence our initial objective from just breeding our own Angus bulls to offering high genetic merit bulls suited to low input, low-cost forage-based systems to other commercial producers at commercial rates, with fertility bred into them."

Investing in the next generation with travel bursary and research sponsorship

The Aberdeen-Angus Cattle Society is helping promote knowledge and learning in the beef sector by funding a travel bursary and dissertation projects for young people.

**GODFREY NEAL TRAVEL BURSARY**

Individuals aged between 18 and 24 years old pursuing a career in beef production are eligible for the Godfrey Neal Bursary, which aims to support the development of the beef sector’s future stockmen and women. Two bursaries are awarded each year worth between £200 and £500. The money can be used towards travel and training opportunities.

Robert Gilchrist, CEO of the Aberdeen-Angus Cattle Society, says the bursary is an excellent opportunity for young people to further their knowledge and skills in beef production.

“The bursary’s primary intention is to contribute towards travel costs for young people who have expressed an interest in learning more about beef production in other parts of the world. Funding for specific UK-based training courses is also considered,” he explains.

Past Society President and beef farmer Angela McGregor was the first beneficiary of the Godfrey Neal Bursary and encourages other young people in the beef sector to apply.

“Following the visit, I continued to select cattle for efficiency and also prioritised carcase size and eating quality traits. I continued to work with a catering butcher for several years who supported my research and 18 years ago finally opened my own farm shop, implementing some of the techniques I’d seen on my travels.”

In addition to travelling, candidates can put forward applications for funding for training. However, Mr Gilchrist encourages applicants to think outside the box and consider specialist courses.

“Together with the scholarship from The John Fotheringham Trust, helped fund my trip to Japan and Australia, where I spent time looking into beef production systems which deliver consistently high eating quality.”

**DISSERTATION SPONSORSHIP PACKAGES**

The Aberdeen-Angus Cattle Society is also supporting undergraduates interested in the beef industry through a dissertation sponsorship award.

Launched last year, the dissertation sponsorship package awards a student interested in pursuing the research of native breeds or, specifically, the performance of Aberdeen-Angus genetics in farming systems. This could cover meat eating quality, the environment and sustainability of native breeds, for example.

The winning candidate receives £1,000 sponsorship towards completing their dissertation.

Last year two final year students, Vicki Elder and Megan Cameron, from SRUC were the recipients of the award. They received financial support for their final year research project, alongside one-to-one mentoring and help accessing key industry contacts.

Vicki Elder was awarded £1,000 towards completing her dissertation, looking at whether a high or low input beef production system is better suited to the future of sustainable farming in Scotland.

As part of that, she has recruited four case studies of ungrazed land.

Miss Cameron says: “The vision is to understand the benefits cattle have on land and soil quality, as this may provide an opportunity to showcase another positive contribution that the beef industry has to offer.”

Miss Cameron was awarded £500 to support research into the advantages that grazing cattle deliver to soil quality.

She has been comparing the micro-organisms in soil from land grazed by cattle with the soil micro-organisms of ungrazed land.

Miss Cameron says: “The Godfrey Neal Bursary, in collaboration with a travel bursary and dissertation projects for young people. Two bursaries are awarded each year worth between £200 and £500. The money can be used towards travel and training opportunities.

Aberdeen-Angus breed of choice on supermarket shelves

Mystery shopper research has shown that British Aberdeen-Angus beef is the most prominent brand across premium supermarket meat ranges.

Analysis carried out by the Aberdeen-Angus Cattle Society in September 2022 revealed the native breed is the beef of choice in the premium meat product lines across a range of supermarkets from Aldi and Asda, through to Waitrose and M&S.

Robert Gilchrist, The Society’s CEO says the findings of the mystery shopper research are incredibly encouraging and testament to the hard work Aberdeen-Angus farmers put in to producing beef with such a high meat-eating quality.

“It is especially reassuring to see such a strong brand presence in both discount retailers and the more high-end supermarkets,” he says.

“We’re proud to be able to fill the shelves at every price point.”

The research looked at eight of the main supermarkets in the UK and their own-brand premium lines of beef – looking specifically at burgers, steaks, mince, and roasting joints – to investigate whether a breed was specified and its country of origin.

Aldi, Asda, Waitrose and Marks & Spencer all represented a strong brand presence of Aberdeen-Angus across their premium labels, and positively all the participating supermarkets at least boasted British beef.

The mystery shopper research showcased that Aberdeen-Angus beef was prominently labelled across Aldi’s entire premium line of burgers, steaks and roasting joints.

Mr Gilchrist says this is particularly encouraging because a recent AHDB report shows discount supermarkets – including Aldi – are set to grow their market share by 23.9% over the next five years, making it the fastest and largest growth of any grocery channel.

“It’s fantastic to see retailers supporting not only British farmers, but also our favourite native breed,” says Mr Gilchrist.

“This should be hugely reassuring for farmers that our breed is recognised as the number one brand by consumers.”

He adds: “It’s also incredibly promising that the most recent British Cattle Movement Service (BCMS) results, which show Aberdeen-Angus as the most popular registered breed in the UK, are being reflected on supermarket shelves.”

---

**Mystery shopper research**

Analysis of eight supermarkets’ premium meat product lines, focusing on beef burgers, steaks, mince and roasting joints.

Supermarkets visited between September 5th to 9th 2022: Aldi, Lidl, Tesco, Asda, Morrisons, Sainsbury’s, Waitrose, and Marks & Spencer.

**Key findings:**

- 50% of supermarkets in the study sold Aberdeen-Angus mince
- 50% of supermarkets in the study sold Aberdeen-Angus burgers
- 50% of supermarkets in the study sold Aberdeen-Angus steaks
- 12.5% of supermarkets in the study sold Aberdeen-Angus roasting joints

Aberdeen-Angus: Beef fit for the future
Moving towards herbal leys to maximise meat from grass

Stephen Hogg and Scott Young each run separate hill units within the business, while Craig Hardy manages the cattle with Peter. Their support and hard work have been integral to making the recent changes on farm.

The Sordy family applied to become a monitor farm as a reaction to changes in subsidy and to become less reliant on that support by reducing their input costs. Harry was also keen to improve their grassland management, having already started to do some rotational grazing.

“We wanted to make the business more profitable. As a hill upland unit, we’re very reliant on subsidies, so we wanted to work on improving efficiencies.

“I’ve also been part of an AHDB progressive sheep group which was really beneficial, so becoming a monitor farm was scaling that on to a farm basis and getting everyone else in the business involved too,” explains Harry.

AHDB Beef and Lamb runs nine monitor and strategic farms across England, supported by counterparts in the dairy, cereals and oilseeds sectors. They do this to achieve its key objectives as a monitor farm.

“The aim of the strategic and monitor farms are to highlight the benefits of implementing best practice on-farm,” says Sarah Pick, Senior Knowledge Exchange Manager at AHDB Beef and Lamb.

“At the start of the programme, each farm sets out its key actions and objectives. We then monitor their progress throughout the four-year programme and share any learnings with the wider industry – good and bad.

“It’s really allowing other farmers in the local community and also across England to learn from the monitor farm.”

There were nearly 90 applications in the same application window as the Sordy family. As part of the project, the selected farmers also benefit from a farm-specific steering group made up of other comparable farms, the farm vet, and land agent. Each monitor farm is also enrolled in a discussion group.

HERBAL LEYS

One of the Sordy family’s objectives as a monitor farm has been to reduce the cost structure of their cattle enterprise through outwintering cows on hill land and growing store cattle on herbal leys. This is a system that suits the Aberdeen-Angus cattle, which thrive on a forage diet and are easy fleshing.

71-head of youngstock are grazing the 11ha of herbal leys in daily shifts. Turned out on 11 April at an average weight of 295kg, the Sordy family aim to achieve 200kg of live weight gain – (116kg daily live weight gain) by the end of September.

“The herbal leys are part of the GS4 option for Countryside Stewardship and the business receives a payment for including them in the rotation,” explains Emily Grant of Forrit Consultancy.

In the past, the cattle were finished on cereal grown from the arable ground, but the Sordy family wants to reduce reliance on these crops and finish the cattle off forage where possible, as they’re looking to enhance margins as subsidies drop off.

With grain prices high, there is also an income foregone from feeding grain instead of selling it and due to the timing of input purchases, there could be a good margin on grain sales this winter.

“The herbal leys are a great opportunity to increase growth rates from a lower input ration. It’s really high-quality feed and we’re going to increase the hectarage of GS4,” says Harry.

One of the challenges of the herbal leys is that the steepest crop has to be shut up for five weeks between 1 May and 31 July to allow red clover to flower for pollinators.

“It’s been a really promising start with the herbal leys. The cattle came out of the shed and took off really well. After the herbal leys have been shut up, they’re stemmer and stalkier, which I’m less comfortable managing, but I think the proof will be in the pudding,” Harry adds.

Matching cattle type to this input is key and is one of the focuses of the monitor farm programme at Alnham. One of the projects will look at alternative ways to select cattle and the best traits for their system.

“We’re planning to do some frame scoring. In theory, this means we can pick the slightly smaller-frame animals that should finish earlier and be better suited to finishing off pasture. They might end up with a slightly lighter carcass weight, but they should be starting to lay down fat a little bit quicker,” says Harry.

OUTWINTERING

The business is adjusting the sheep grazing to allow 100ha of hill land to be shut up to provide deferred grazing for cattle over the winter. This has necessitated a lot of support from their shepherds, who have had to accommodate changes in their systems.

“We need to build pastures on the hill in order to be able to outwinter,” says Ms Grant.

“50ha will have ewes pulled off in July and another 50ha will be shut up at weaning in August. We’ll see how much pasture we can grow in that period, determining how long we can outwinter the cattle. This needs to be balanced by having enough grass on lower ground for the ewes,” Ms Grant adds.

The Sordy family are now looking to select cattle suited to an outwintering system. Those with a higher proportion of Aberdeen-Angus genetics are likely to be a better fit, but the programme will look at specific selection criteria to ensure the best results.

“It’s really important that Alnham remains a productive unit. We can see the opportunity in shifting how stock utilise the natural resources on the farm to help reduce costs and hopefully maintain output where possible,” summarises Ms Grant.
Case Study

The herd’s roll of honour includes no fewer than 11 management of the herd in more recent times. By Graeme when he took over the ownership and Stirling bull sales. This success story was continued championship successes and high prices at the Perth Angus herd of its era, with an unrivalled record of from fairly modest beginnings into the leading Aberdeen-breeding acumen of Mr Massie, who built up the herd as having been synonymous with the development high-priced bulls over the years. He paid tribute to the breeding in herds throughout the country.

The herd certainly bowed out in style and the sale only served to endorse Graeme’s view that the herd had reached a peak with the best group of cows and the best crop of calves in the herd’s 50-year history. This claim was borne out by the doyen of pedigree auctioneers, David Leggat, who sold many of Blelack’s high-priced bulls over the years. He paid tribute to the herd as having been synonymous with the development and improvement of the Aberdeen-Angus breed to its present high standard over the past four decades. “The Blelack herd dispersal was one of the most significant in the breed’s history and provided a rare opportunity for breeders to obtain a class of cattle not usually offered for sale,” says Mr Leggat.

Little wonder that Neil, who has twice served as President of the Society, is a former recipient of the Royal Highland and Agricultural Society of Scotland’s Sir William Young Award and was also honoured with an OBE for outstanding services to livestock breeding. Like the breed itself, the Blelack herd evolved over the years to reflect changes in market demand. They moved from the smaller, dumper cattle in vogue in the 1950s and 1960s to suit the export market, to the large, rangier cattle of the 1970s and 1980s (sometimes considered too extreme and lacking traditional Aberdeen-Angus characteristics) to the “middle-of-the-road” of today encompassing all the desirable characteristics of the breed, such as easy fleshing and correctness, as well as size.

The herd was founded by Neil in 1967 following the move to Blelack, although he had previously dabbled in Aberdeen-Angus at near-by Burgour Farm, Kintore. He had already earned his spurs and demonstrated his skills as a judge of cattle as a member of the winning team in the young farmers’ international stockjudging competition at the Royal Highland Show. But there was no crock of gold behind the foundation of the Blelack herd, which, by Neil’s own admission, was founded from modest resources.

The foundation females comprised two cows from Mrs A F Wallace’s Candacraig herd at Strathdon, which were considered too old to include in the herd’s dispersal sale. This was followed by 16 females from the dispersal of Brigadier ER Kewley’s Little Dean herd in Hampshire and five at the dispersal of Capt Lewis Edmunds’ Colderton herd in Wiltshire.

Individual purchases at the dispersal of Howard Potts’ Addington herd in Buckinghamshire included the cow, Phyllis of Addington, bought for 70gns, and the dam of Prince Philip of Blelack, who came out top in a bull performance test at the North of Scotland College of Agriculture and was retained as a stock bull, exerting a big influence on the early development of the herd. A later significant purchase for the top price of £500 at the dispersal of Jim Stuart’s Balavil herd in Ross-shire was Ewora of Balavil, founder of what has become one of the most successful breeding lines in the herd.

By the 1970s, it was becoming evident that the breed had to change. Demand for Aberdeen-Angus bulls had tailed off, the export market had all but disappeared and bulls were considered too small for the home commercial market, where the continental breeds were beginning to make an impact. But it was not until 1971 that the Council of the Society eventually agreed to open the Herd Book to imported cattle and breeders were able to look to Canada for bulls with greater growth potential.

Neil was very much in the vanguard of the move towards larger Aberdeen-Angus and was among the first breeders to import Canadian genetics, which proved to be the key factor in getting size back into the breed. The Massie’s first purchases were a heifer, Skillymarno Princess, and a bull, Skillymarno Revel, followed by a succession of influential bulls and females over the next 50 years.

Like a notable early purchase from Doug Robertson was the heifer, Coldstream Lady Heather 16W, which had a huge influence on the herd, her progeny including Lord Horatio Pitt of Blelack, by Southholm Winchester 357, a notable sire in the Borders’ ‘herds of Wedderlie, Haymount and Tofts.

Other Canadian sires which proved real game-changers include Royal Added Value 190, sire of three Perth champions, which went on to win a Royal Show championship for Shadwell as an eight-year-old, and DMM Decision, sire of two Perth champions and also Blelack Blackstock, retained as a stock bull and considered by Graeme to be one of the best bulls bred in the herd.

Perhaps the most influential sire in recent years has been Netherhallan Peter Pershore E052 which, line-bred to Added Value daughters, proved highly successful, his first crop of nine bulls at Stirling averaging £10,000.

A notable early purchase from Doug Robertson was the heifer, Coldstream Lady Heather 16W, which had a huge influence on the herd, her progeny including Lord Horatio Pitt of Blelack, by Southholm Winchester 357, a notable sire in the Borders’ ‘herds of Wedderlie, Haymount and Tofts.

The herd will be greatly missed in their retirement.

The dispersal of Neil and Graeme Massie’s renowned Blelack Aberdeen-Angus herd in October 2021, reported briefly in the last issue of the Review, marked the end of an era for the Aberdeen-Angus breed in the North-east of Scotland and, indeed, throughout the UK.

It is little wonder that press reports of the dispersal sale generated headlines such as ‘Sale of the Century’ as breeders from all over the country vied to secure some of the top genetics in the breed.

The sale achieved a top price of 62,000gns for a cow and heifer calf, sold separately at 32,000gns and 30,000gns. 31 five-figure prices and a sale gross of over £1.1 million for the 161 lots.

To crown an amazing day, the herd also carried off the bull sale championship and reserve with two bulls, which sold for 24,000gns and 11,000gns, and a third – second to the champion in the same class – realising 17,000gns.

Bulls from the herd have sold for up to 28,000gns and 25,000gns (twice). Two Blelack Matron sales held in recent years saw the cow, Blelack Eyrie G197, sell for a then record price for an Aberdeen-Angus female of 32,000gns at the 2012 on-farm sale. This was only to be capped at Stirling in October 2016, when the cow, Blelack Lady Elvis 258, sold for 35,000gns, with her bull calf selling separately for 10,000gns.

It only takes a browse through Herd Books, Reviews or sale catalogues to get a flavour of the impact of Blelack breeding in herds throughout the country.

The herd was always managed on commercial lines, with cows outwintered and heifers calved at two years of age, with an emphasis on size and the milking ability of cows.

“I think we managed to get the size of our cattle about right for the modern market,” says Neil. “Commercial buyers are looking for calves which will grow and finish quickly.”

He views the current trend of going back to a smaller type of Aberdeen-Angus to reduce the maintenance cost of cows and meet the current demand for smaller carcasses as a risky business.

“History tells us that you can lose size very quickly but getting it back takes several generations,” he warns.

Neil is delighted that the Calcott family, buyers of Blelack farm, are putting together a herd under the Blelack Hill prefix, and enjoys regular visits back to Blelack to keep his eye in.

The story of the Blelack herd, from its modest beginnings to becoming one of the most influential herds in the breed, is a remarkable success story. The expertise and influence of Neil and Graeme in the Aberdeen-Angus breed will be greatly missed in their retirement.

End of an era as Blelack herd dispersed

The dispersal of Neil and Graeme Massie’s renowned Blelack Aberdeen-Angus herd in October 2021, reported briefly in the last issue of the Review, marked the end of an era for the Aberdeen-Angus breed in the North-east of Scotland and, indeed, throughout the UK.

It is little wonder that press reports of the dispersal sale generated headlines such as ‘Sale of the Century’ as breeders from all over the country vied to secure some of the top genetics in the breed.

The sale achieved a top price of 62,000gns for a cow and heifer calf, sold separately at 32,000gns and 30,000gns. 31 five-figure prices and a sale gross of over £1.1 million for the 161 lots.

To crown an amazing day, the herd also carried off the bull sale championship and reserve with two bulls, which sold for 24,000gns and 11,000gns, and a third – second to the champion in the same class – realising 17,000gns.

It was a remarkable sale and testimony to the pedigree breeding acumen of Mr Massie, who built up the herd from fairly modest beginnings into the leading Aberdeen-Angus herd of its era, with an unrivalled record of championship successes and high prices at the Perth and Stirling bull sales. This success story was continued by Graeme when he took over the ownership and management of the herd in more recent times.

The herd’s roll of honour includes no fewer than 11 supreme championships at Perth/Stirling and eight reserves, as well as countless senior, intermediate, junior and female championships.

Bulls from the herd have sold for up to 28,000gns and 25,000gns (twice). Two Blelack Matron sales held in recent years saw the cow, Blelack Eyrie G197, sell for a then record price for an Aberdeen-Angus female of 32,000gns at the 2012 on-farm sale. This was only to be capped at Stirling in October 2016, when the cow, Blelack Lady Elvis 258, sold for 35,000gns, with her bull calf selling separately for 10,000gns.

It only takes a browse through Herd Books, Reviews or sale catalogues to get a flavour of the impact of Blelack breeding in herds throughout the country.

The herd certainly bowed out in style and the sale only served to endorse Graeme’s view that the herd had reached a peak with the best group of cows and the best crop of calves in the herd’s 50-year history. This claim was borne out by the doyen of pedigree auctioneers, David Leggat, who sold many of Blelack’s high-priced bulls over the years. He paid tribute to the herd as having been synonymous with the development and improvement of the Aberdeen-Angus breed to its present high standard over the past four decades. “The Blelack herd dispersal was one of the most significant in the breed’s history and provided a rare opportunity for breeders to obtain a class of cattle not usually offered for sale,” says Mr Leggat.

Little wonder that Neil, who has twice served as President of the Society, is a former recipient of the Royal Highland and Agricultural Society of Scotland’s Sir William Young Award and was also honoured with an OBE for outstanding services to livestock breeding.
Wherever possible, I want my cattle to be ‘handsfree’ and the strong maternal traits of the Aberdeen-Angus has really helped with this.”

Careful selection of breeding stock is key to producing consistent beef

**REFINING BREEDING STOCK**

The estate is home to a 170-head pedigree Aberdeen-Angus herd, which calves down in April, allowing the cows to make the most of the grazing season.

When selecting breeding stock, Mr Lohoar has certain traits he looks out for. “When it comes to heifer replacements, we select the most suitable animals for our herd and system and aim to calve them at 24 months. Our decisions when selecting replacements are based on specific Estimated Breeding Values (EBVs) which suit our herd, as we’re keen to continue to improve performance in certain areas.

“The traits we specifically focus on for the maternal line are calving figures, growth rates, plenty of milk, eye muscle and fat cover,” explains Mr Lohoar.

He adds that they focus on two main EBV traits when selecting bulls: moderate growth and good health status.

“We’ve bought our last few bulls from a breeder in Orkney who’s also focusing on feed efficiency. This is another heritable EBV which we hope to introduce into our herd to help us achieve more from less feed.

“While I use EBVs to ensure that I’m selecting high quality breeding stock, when it comes to choosing a bull, the figures aren’t everything. They also need to have good locomotion and shape.

“We also ensure we put an easy calving bull onto our heifers to avoid any difficult calvings or worse, experience mortality at calving time,” he adds.

Mr Lohoar estimates that at a cost of £1/day to keep a cow, it’s expensive to retain unproductive animals. That’s why his aim is to breed fertile cows that calve easily and get back in-calf quickly.

He is currently exporting 30 to 40 surplus breeding heifers to the European Union due to demand for these high-quality animals. However, when Brexit first happened it wasn’t easy to export, so they were finished instead.

The steers are all sold to Scotbeef at 20 to 22 months at 360 to 370kg deadweight. Their aim is for all cattle to be graded at R4L or better.

“To help achieve carcase consistency, we feed all of our animals the same ration. We also aim to finish all animals at a standard age, weight and fat cover,” he adds.

“It’s also important to reiterate that while EBVs give you a strong genetic foundation for good breeding stock, to get the best out of the stock and achieve consistency throughout the herd, good management is key.”

**KEEPING THE CONSUMER IN MIND**

There is no other breed in the country that has the brand presence of the Aberdeen-Angus with consumers. Mr Lohoar says: “It’s renowned for being a quality product, so why would you try and sell something else? The Aberdeen-Angus breed is paving the way for premium beef products on the shelf, as it’s an iconic brand consumers look out for.

“The reason demand is so high for this product is because of the consistent meat-eating quality,” he explains.

“As producers, we’re all aware that margins are getting tighter and that we need to do all we can to be as efficient as possible. Therefore, it’s more important than ever that we’re producing beef that’s fit for the future and genetics have a key role to play in this,” concludes Mr Lohoar.
A herd built to last

With another year of rising input costs under the belt, it can be exceptionally tempting to cut back and only spend on essentials.

WHAT IS ‘ESSENTIAL’?

Many discussions have been had around how best to maintain and improve herd performance and profitability – after all, you are running a business. All inputs need to be carefully scrutinised and their ability to improve efficiency of the herd justified.

One place we can have an impact on the overall bottom line, is by having a herd with inbuilt longevity. Cows that get in calf, calve down every 365 days and live forever should be what we strive for. In the dairy world, it is readily accepted rearing heifers for replacements is a significant cost and the ones which do not get in calf, do not rear a calf or do not make it to second lactation, are a colossal strain on the business. Heifers in a suckler herd are no different. Therefore, just as much emphasis should be placed on rearing heifer calves for replacements as the cattle being turned out for shows and sales.

Epigenetics is a simple concept where we can influence which performance genes are switched on and off in calves, by the nutrition and environment of the cows and bull just before bulling and at the point of conception. In reality, we can influence the lifetime performance of calves by getting nutrition and management right around bulling. This is not overly complex, although requires a careful overview and a good plan alongside your nutritionist.

When it comes to turning out quality stock, genetics, management and nutrition are all required. Aberdeen-Angus cattle stockmen and women are well respected for expert stockmanship and ability to turn out stock. Couple that with quality genetics, it just leaves the nutrition. This is where we at Harbro come in.

Our Stockman’s Choice pedigree range holds health, immunity, fertility and longevity as its core values and it has continued to grow in popularity since its launch two years ago. Yet again, we were delighted to see so many customers doing well at shows, sales and herd competitions last year.

The latest addition to the range is our powdered mineral, which allows producers to get all the benefits of the Stockman’s Choice mineral package, while feeding a cost effective total mixed ration (TMR) at home. It is a top quality, balanced mineral for high genetic merit growing and conditioning animals, designed to support health, immunity, fertility and longevity.

To give you a flavour, just two of the unique key features are:

• RumiTech, which is a Carbon Trust assured additive proven to reduce methane emissions, while also increasing feed conversion ratio and reducing cost of production. A trial carried out with young bulls fed RumiTech, showed an increase in loin eye muscle area.

• Rumi Defence, which has antioxidant and anti-inflammatory properties. It enhances immunity and improves the function of vital organs such as the liver, which is undoubtedly under pressure with the level of performance expected from these animals.

Pedigree nutrition is at the heart of what we do; we have a team with a vast range of experience on hand to tailor nutrition plans to meet performance targets, to allow stock to be turned out to the highest standards and the base herd to be built to last.

Please get in touch to discuss how a Stockman’s Choice nutrition plan can complement and enhance your management and genetics.

From all of us at Harbro, we hope 2023 is full of success for all Aberdeen-Angus cattle breeders!

Comprising of 20 breeding females, the Woodvale herd is spring and autumn calving and includes a number of cow family lines, including Polly Pride from Tofts, Blackbird from Eastfield, Edwinia from Duncaniemere, and Delia from Carlhurie.

Foundation females included Lady Jane 2nd of Priestland bred by Sam McCollum from Bushmills, County Antrim; and the Miss Annie and Tidy Bee families are the results of embryos imported from the Coldstream herd in Canada.

Heifers calve into the herd at two-years-old, and all stock is grazed in the summer and fed round baled silage during the winter housing period. The herd has been participating in the SAC herd health scheme since 2009.

Other enterprises include the Woodvale pedigree Beef Shorthorn herd, which comprises three breeding females; and a 20-ewe flock of pedigree Dorset sheep, which recently scooped second prize in the small flock category of the society’s National Flock Competition.

Over the years, Alwyn has been actively involved in the Aberdeen-Angus Cattle Society, serving two terms on the Council and two terms as a representative in the Irish Aberdeen-Angus Association. He also chaired the NI Aberdeen-Angus Club over three years; and has judged numerous shows, including Perth, Berwickshire County Show, Elma in Sweden, and the Irish Association’s Herd Competition.

The Armour family are impressed by the longevity and hardiness of the Aberdeen-Angus breed. “Our breeding females are all relatively young, but in the past, we’ve had cows in the herd that were fourteen years old. The Aberdeen-Angus is a fertile and easy-calving breed that adapts well to a variety of farming systems. The females have plenty of milk and excellent mothering ability, and the bulls and females have a good temperament and are easy to work with,” added Alwyn.

Stock bulls that have had a positive impact in the herd include Wedderlie Net Profit E916, owned in partnership with Neville and Ivan Forsythe’s Coltrim Herd, and the home-bred Woodvale Roscoe Y054.

“Roscoe was the sire of the October 2003 Perth junior and supreme champion; while Net Profit was behind the breeding of the Stirling October 2015 reserve intermediate champion. Net Profit was a popular AI sire and produced more than 170 progeny in herds throughout GB and Northern Ireland.

“More recently, our herd sires Oak Moor Mr Paul S311 and Oak Moor Lord Ivanhoff U419, both purchased privately, have been putting their stamp on the herd.”

Successful AI sires have included Kearsbeath Karma SS39, Rawburn E-Type W176 and Lockerley Black Boromir.

The Woodvale herd has sold bulls to a top of 8,500gns, and females have peaked at 5,000gns, with animals sold to local pedigree and commercial herds, and exported to Albert de Cogan’s Mogeely herd in County Cork, Paul and Lisa Frain’s Allabury herd in Cornwall, Norman Belfield’s Daneside herd in Macclesfield, and Jim Mulvey’s herd in Co Leitrim. Three bulls have also been sold to the bull stud at Ballycraigy owned by AI Services (NI) Ltd – Woodvale Total G616, Woodvale Kool Jaguar P633 and Woodvale Network R854.

spring sales in short

LISNAFANNA ED TOPS TUAM AT €3,800

A strong yard of quality Angus bulls was led with a call of €3,800. This was paid for Lisnafanna Ed W052 from the herd of John Brady, Virginia, Co Cavan. Born in September 2020, this powerful bull was awarded champion bull calf in last year’s Connaught Leinster Aberdeen-Angus Clubs herd competition. Sired by Al Bull Stushill Bomber TB12, he is out of Scottish imported cow Cheeklaw Emilia RS27.

ANGUS BREAK RECORDS IN BANDON

The Munster Aberdeen-Angus club hosted its annual spring bull sale in Bandon in early April, reaching record highs. In total, 83% of the bulls forward sold to an exceptional average of €2,820, up over €400 on the year. The highlight was when the day’s pre-sale show champion sold for a new sale record price of €5,100. This was secured by Inisheen Todd, a September 2020-born bull bred by Denis O’Riordan, Macrooom, Co Cork. Ranking five stars on the replacement index, this bull is a son of stock bull Cool典al Reke, with a host of former stock bulls on the dam’s side. Todd was secured by local breeder Derek Lovell. Tapped out as reserve champion of the day by Judge Gene Lynch was Briarhill Pavaroitti W018. Bred and exhibited by Bryan O’Halloran, Templarnatin, Co Cork, this bull is a son of the herd’s stock bull Mercury Royal Figo. Born in October 2020, this stylish bull goes back to The Moss Ethelorence L152 and was knocked down at €3,000.

ANGUS ON FIRE IN TULLOW

The Irish Aberdeen-Angus Association hosted its first ever sale in Tullow on Wednesday 20th April with exceptional demand for the quality bulls on show from the get-go. Such was the demand, the sale grossed a 100% clearance rate. This flawless rate was matched with the associations’ strongest sale average to date at a massive €3,862 and an average age of less than 14 months.

Leading the way was a call of €4,800 who was 12-month-old Liss Doyle X056. This stylish young bull was bred and exhibited by John and Sean McEnroe from Oldcastle, Co Meath. Leading the prices with a call of €5,000 was the January 2021-born Liss Bulleye X028. Sired by the herd’s stock bull Cairnton Kilimanjaro U435, he is out of Liss Dari RS51-bred dam Liss Biluri V852. This double five-star bull is ranked in the top 5% of the breed for dairy beef index and found a new home with a local farmer.

Securing the second-top price of €4,700 was Macreagh Mor Essence W015. This bull was bred and exhibited by John McDermott, Skreen, Co Sligo, and is a son of the highly popular Al bull Cornoamucca Lord Hardy K222. Carrying a dairy beef index of €105, he ranked in the top 5% of the breed. Tasked with judging this year’s premier was Jim Forrestal of the Curnarran herd, based in Kilkenny. He found his champion in the oldest bull on offer – Pobblestown Eddie W265. This August 2020-born bull was bred and exhibited by Meath-based John Canty. Sired by the herd’s stock bull Dunleaver Porter R772, he is out of a Mogeely Joe H979-bred dam. The first lot into the ring, he sold for the sale’s first bottom selling at €3,600. Standing reserve to Eddie was Cram Mor Lord Juggernaut X021. This bull was bred by Conor Byrne, Dunshaughlin, Co Meath, and was secured by Cathy O’Hara from the Minree family, who runs the Dulague herd in Castleisland, Co Kerry. Born in March 2021, this five-star bull is a son of stock bull Coraghy Ronaldo, with Luddenmore Kallosal on the dam’s side. Carrying a dairy beef index of €100, he was knocked down at €4,000.

Premier sale topper Liss Bulleye X028 who sold for €5,000.

EXCEPTIONAL TRADE CONTINUES AT IRISH ABERDEEN-ANGUS PREMIER

The Irish Aberdeen-Angus Association hosted its premier sale in Central Auctions Nenagh on Thursday 5th May, with the exceptional trade witnessed for Angus bulls well and truly continuing. In short, the average price rose by over €900 on the year, with a further eight bulls selling.

Continuing their strong run of bull sales were John and Sean McEnroe of the Liss herd in Oldcastle, Co Meath. Leading the prices with a call of €5,000 was the January 2021-born Liss Bulleye X028. This bull was bred and exhibited by John McDermott, Skreen, Co Sligo, and is a son of the highly popular Al bull Cornoamucca Lord Hardy K222. Carrying a dairy beef index of €105, he ranked in the top 5% of the breed. Tasked with judging this year’s premier was Jim Forrestal of the Curnarran herd, based in Kilkenny. He found his champion in the oldest bull on offer – Pobblestown Eddie W265. This August 2020-born bull was bred and exhibited by Meath-based John Canty. Sired by the herd’s stock bull Dunleaver Porter R772, he is out of a Mogeely Joe H979-bred dam. The first lot into the ring, he sold for the sale’s first bottom selling at €3,600. Standing reserve to Eddie was Cram Mor Lord Juggernaut X021. This bull was bred by Conor Byrne, Dunshaughlin, Co Meath, and was secured by Cathy O’Hara from the Minree family, who runs the Dulague herd in Castleisland, Co Kerry. Born in March 2021, this five-star bull is a son of stock bull Coraghy Ronaldo, with Luddenmore Kallosal on the dam’s side. Carrying a dairy beef index of €100, he was knocked down at €4,000.

Irish Aberdeen-Angus extravaganza breaks all records

The event combined a new pre-inspected genetic excellence sale of 55 lots on the Saturday, with a massive €10,000 national calf sale on the Sunday. Hitting the ground running, the sale boasted a number of high sellers and smashed numerous records.

A full catalogue of entries resulted in 47 of the 55 selling to a massive average of €4,211. This easily surpasses any other average record for an Angus cattle sale on the island of Ireland.

In further breakdown, we saw bull prices range from €3,700 to €10,500 to record an average of €6,340. Female trade peaked at €5,400, with 87.5% of all females forward selling for an average just shy of €6,000.

Topping trade at €10,500 was the nine-month-old Liss Bruno Y120 from the herd of John and Sean McEnroe, Oldcastle, Co Meath. This super donor cow was the choice of AI company Dovea Genetics. This is the highest male price at auction for an Angus in Ireland in nearly 20 years. Buyers of the highest-priced lots sold through the ring also received a €500 money back voucher, which was kindly sponsored by Angus Beef Ireland.

Securing the second-top price of the day and the top female price was Bunlahy U2 Katy ET, who sold for €9,400. Bred by Longford breeders Aiden and David Reynolds, this rising 15-month-old heifer is the first to be offered from the super donor cow Bunlahy Katy. Her sire is equally as impressive, being former All-Ireland champion Carrgroe Mr Rebel. Boasting five stars down the line, she was secured by Ray Tiernan for his Blackhall herd.

Back to the males and next in line was Albert and Jennifer DeCogan, who sold Mogeely Joe H979 for €10,500. Another breeder leaving happy was Richard Lombard, who runs the Dulague herd in Castleisland, Co Kerry. He saw his top lot Dulague Red Beauty X314 sell for the second-top female price of €7,400. This super September 2021-born red Angus is sired by the herd’s stock bull Stairhaven Red Erne U2066, who comes from the renowned Ellen Erica line. Carrying four stars on the replacement index, he was again knocked down to Gigginstown.

Taking home €6,400 were the DeCogans with Mogeely Pru X785. This five-star heifer is sired by Mogeely Joe H979 and is out of the 20,000gnps Cheeklaw Pru S541. Securing her for his Dowagh herd in Co Mayo was Conor O’Mahony. As part of the sale, the Liss herd of John and Sean McEnroe had a select draft of nine heifers from the core of the herd. These heifers topped €6,000, with eight of the nine selling to average over €4,000. Leading the way was Liss Missie X043, who was secured by Cathy O’Hara from Northern Ireland. This five-star heifer is sired by Cairnton Kilimanjaro U435 and is out of the Minree family, who secured best cow family in the Connaught Leinster herds competition for the last two years running.

Above: Liss Bruno Y120 who sold for €10,500. Below: Bunlahy U2 Katy who sold for €9,400.

Another breeder leaving happy was Richard Lombard, who runs the Dulague herd in Castleisland, Co Kerry. He saw his top lot Dulague Red Beauty X314 sell for the second-top female price of €7,400. This super September 2021-born red Angus is sired by the herd’s stock bull Stairhaven Red Erne U2066, who comes from the renowned Ellen Erica line. Carrying four stars on the replacement index, he was again knocked down to Gigginstown.
Mercury claims first Aberdeen-Angus All-Ireland

The Irish Aberdeen-Angus Association hosted its first All-Ireland finals since 2019 at Oldcastle Show at the end of July. This major summer event in the Angus calendar attracted 80 entries and made tough work for the year’s judge Angus Stovold, who runs the Rosemade herd in England. After over three hours of judging in sweltering heat, he eventually tapped out Mercury Special Tinge as his overall champion. This super young cow was bred by John and Shane Murphy, who run the Mercury herd based outside Banteer, Co Cork, and he culminated in the day also taking the title of senior champion.

Special Tinge is a two-year-old first-calver sired by the herd’s former stock bull Luddendenmore Just The Business and out of the home-bred Mercury Lovely Tinge, making her a full sister to Doone Al Buil/Mercury Royal Tinge. She was shown alongside her smart January-born heifer calf Mercury Evening Tinge Y882, who was sired by the home-bred Mercury Sexy Eric.

This marks the first overall championship win for the Cork pair, who were presented with the prestigious All-Ireland championship trophy by Mark O’Rourke and Stephen Lyons of Univet, title sponsors of the event for the last 33 years. It was a double for Cork, as standing reserve overall champion was Mogeely Dram X783 from Albert and Jennifer DeCogan. The DeCogan pair are no strangers to top placings at this event, having claimed the supreme championship on no less than seven occasions. Dram X783 emerged victorious from the biggest class of the day before taking the junior and reserve overall championship. Sired by former stock bull Wedderlie Blackbox J935, this super September-born bull is a son of Liss Dingle V936, who placed first in the junior cow class and taken the reserve senior title at the last Tullamore Show in 2019. Adding to this, she secured the junior championship at the 2018 show as an in-calf heifer.

Sired by Te Manna Berkley BL, she was shown alongside her natural twin heifer calves, who also performed well on the day by placing first and second in the January-born heifer calf class, despite being over three months younger than most exhibits. The pair were sired by the herd’s stock bull Lisduff Bang Bang V472.

This year’s show was judged by one of the most recognised cattle judges in the world - PJ Budler. To date, he has judged over 70 different breeds on six different continents in over 40 countries. He found his reserve overall champion in the form of Jadim Lady Sandra K150. This September 2021-born heifer was bred and exhibited by first-time Tullamore exhibitors Enda and Adam Kearney from Kilfenora, Co Clare. Sired by Canadian AI bull HF Alcatriz, he is from the herd’s most prolific family line.

As mentioned, the McEnroe family also came up trumps in the male section. Their January 2022-bom bull calf Liss Bruno X120 was the judge’s choice. This stylish young bull is a son of Liss Dingle V936, who placed first in the intermediate bull class on the day.

Standing reserve male champion after coming out on top of a strong autumn bull calf class was Clara Unger, bred and exhibited by the Murphy family from Millstreet, Co Cork, this December 2021-born bull is a son of Rawburn Boss Hogg, with the dam the homebred Clara L734 Donna.

Overall champion Tullamore Show Liss Kim S641.

Clontead claims first AXA supreme calf show championship

It was a weekend of dreams in Thurles for mother and son Deirdre and Eustace Burke of the Clontead Aberdeen-Angus herd. As part of the Irish Aberdeen-Angus Extravaganza, the pair went on to claim the title of All-Ireland champion medium herd for the second year running on Saturday 8th October, before their young heifer was tapped out as AXA supreme national calf show champion the next day.

The Extravaganza proved a roaring success for the association, attracting record prices for its premier sale and the €10,000 prize fund for the national calf show attracting the best animals in the country. This record prize fund for the association would not have been possible if not for the generous sponsorship of AXA, Marteye, Angus Beef Ireland, FDC Group, Munster Bovine, Cormac Tagging, Irish Angus Producer Group/ABP, Agriland and Dovea Genetics.

Due to this hefty prize fund, eyes remained firmly on judging duty for the day Wanda Tilson, who runs the renowned Wedderlie herd in Scotland alongside her mother and father. Following her judging of 11 classes and four championships, even more tension built on the buildup to her tapping out the AXA supreme champion for 2022. After much deliberation, she eventually tapped out Clontead Mandy X363 as her supreme champion. As mentioned, this heifer was bred by Cork-based Eustace and Deirdre Burke and marks the first time the duo has claimed the national calf show championship. Sired by Rawburn Boss Hogg N630, she is out of the home-bred Clontead Miss Mandy S204, herself a Goulding Jumbo King K436 daughter.

Mandy X363 came out on top of a strong August and September 2021-born heifer class, before taking the senior heifer championship and eventually the AXA supreme championship.

The reserve supreme championship also headed to Co Cork, with Carbery Venice from Keith and Caroline Vickery taking the plaudits. This February 2022-born bull was again sired by Rawburn Boss Hogg N630, with Carbery Sea Mist the dam. Venue took the February and March 2022-bom bull class before taking the junior male championship on his way to the reserve supreme.

Standing senior male champion on the day was the winner of the first bull class into the ring. Droumdaniel Ulton from Eoin Lynch, Bantry, Co Cork. This August 2021-born bull is sired by the herd’s stock bull Westellen Black Bingo V865 and out of the Gigginstown Days of Thunder.

Taking the last section championship on the day was Edgeworthstown Lady Heny Y058, who sired junior female champion. This February 2022-born heifer was bred by the Ferguson family from Co Longford. Sired by Lisduff Red Pepper R368, she is out of Edgeworthstown Lady Heny R94.

Standing reserve senior heifer champion to the supreme was Jadim Lady Sandra X150 from Enda Kearney, Co Clare. This daughter of HF Alcatriz is out of Blackfield Lady Sandra P531 and had a phenomenal summer at the shows.

Reserve senior male champion went to Alan Gibbons with Carrcowboy Usce Beatha. This October-born bull is a son of Stoupill Bomber and Margaretane Lady Haze. This topped a super day for the Roscommon man, who also took the reserve junior male championship with Carrcowboy V.I.B. This April-born bull calf was sired by Maine Dragon and out of Kiltenevan Damsel.
The Canadian Angus Association has developed new initiatives to support its members and enhance the beef industry. One such initiative is the Australian Beef Industry Trust, which provides solutions to improve the industry. The app, Angus Verified, allows producers to enter data online and be matched with feedlots and order buyers seeking Angus calves. The app also provides more opportunities for producers and ranchers around the world to connect. In late fall 2022, the Canadian Angus Association solved a problem plaguing a lot of farmers and ranchers around the world - calf book destruction due to accidental laundering. The Angus Digital Calving Book allows producers to enter data offline whenever it is convenient, require Wi-Fi or cellular data only for syncing. It is a simple, clean, easy-to-use interface fully integrates with the CAA database for ease of submitting registrations. Producers can create multiple calving books within the app, and any or all of them can be shared with the farm team and family members. The CAA calving book is ready for the 2023 calving season and is available for Android and iPhone.

More Information
Details on these and other initiatives can be found on our website, www.canadianangus.ca, and we invite anyone who is interested in keeping up with the latest developments to check out our monthly electronic newsletter at www.canadianangus.ca/newsletter.

Czech breeders get ready to host the world angus technical meeting

This year marks a special anniversary in the history of Aberdeen-Angus in Czechia. Thirty years ago, shortly before the dissolution of Czechoslovakia, the first calves were born here to heifers that had been bought and flown as cargo from Canada. This purchase of several hundred heifers laid the foundations for breeding Aberdeen-Angus in the country.

As a result, the breed has enjoyed much popularity, with 5,000 calves from 150 individual herds registered just last year. Half of these were Red Angus.

After a gap of one year, we conducted the third large-scale scanning of more than 700 yearlings. Linda McKendrick keenly completed the scanning within one week. ABRI Australia conducted an EBV evaluation in Breedplan for the whole population of Czech Angus cattle. We presented the results to the breeders through an online database to stimulate decisions on whether to join the platform.

In Czechia, we allow only bulls that pass performance standards for breeding. We perform weighing and linear scoring at licensed testing stations or farms. While testing stations regularly organise sales on the day of last scoring, there were no sales of bulls tested at breeders' farms. In May 2022, we organised the first sale of farm-tested bulls, where each breeder showed off two of their best bulls. The price for the top-selling bull reached £5,000. We believe that we succeeded in setting up a new tradition of bull sales. For more information about the sale, visit: www.svoobky.cz.

To take our cattle shows to new heights, we hosted Seonaid McLaren and Stephanie Dick for a cattle-fitting workshop in the summer. More than 50 attendants between the ages of 5 and 75 were blown away by all the new tricks and skills handed over by their exceptional teachers.

Now, the top news. The World Angus Technical Meeting comes to the Czech Republic between 8 and 15 September 2023. After four long years of absence, we invite you to join us for a series of excellent presentations by confirmed speakers and meetings with old and new friends. Please, visit the following link for a detailed programme: www.worldangus2023.com.

The shows and the congress will kick off in the historic city of České Budějovice, south of Prague. As part of the meeting, you can look forward to a four-day trip filled with exciting stops, including cattle farms, wine cellars at a monastery, a Prague boat tour, and beer and delicious food on the way.

Vladimír Matěj Šašek
Czech Aberdeen-Angus Association

Josef Dvořák, the Man Who Brought UK Aberdeen-Angus to Czech Breeders, Celebrates 70 Years

Josef Dvořák was born on the 10th of November 1952 to a farming family in ‘Telecí’, a fitting name that means the ‘Calf Village’, on the border of the Czech Highlands. Josef Dvořák was born on the 10th of November 1952 to a farming family in ‘Telecí’, a fitting name that means the ‘Calf Village’, on the border of the Czech Highlands. Josef would always bring along a drawing when visiting a friend in Glasgow. His friend, a Protestant priest and a native of ‘Telecí’, had been expelled by the Communist regime. Josef would always bring along a drawing when visiting a friend in Glasgow. His friend, a Protestant priest and a native of ‘Telecí’, had been expelled by the Communist regime. Josef would always bring along a drawing when visiting a friend in Glasgow. His friend, a Protestant priest and a native of ‘Telecí’, had been expelled by the Communist regime. Josef would always bring along a drawing when visiting a friend in Glasgow. His friend, a Protestant priest and a native of ‘Telecí’, had been expelled by the Communist regime.

Around that time, the Communist regime confiscated the land his family had owned and cultivated since the 19th Century. His farming roots led Josef to study at the University of Agriculture in Brno, but he was determined to pursue a career as a professional cross-country skier. Afterwards, he ventured into forestry, working as a lumberjack, one of the few private enterprises the Communist regime would tolerate. Wood logging opened a window for Josef to work with his beloved horses. After the fall of the Communist regime in 1989, Josef’s family regained possession of their land and returned to farming. Browsing through his dad’s old book on farming, a drawing of an Aberdeen-Angus bull stopped Josef in his tracks. Could this breed be a good fit for the sloping hills and stony soils of the Czech Highlands? Josef made a decision.

While his first heifers came from the Ajshoj herd in Denmark, Josef soon turned his gaze to Scotland. He would take every opportunity to explore Aberdeen-Angus herds while visiting a friend in Glasgow. His friend, a Protestant priest and a native of ‘Telecí’, had been expelled by the Communist regime. Josef would always bring along a drawing when visiting a friend in Glasgow. His friend, a Protestant priest and a native of ‘Telecí’, had been expelled by the Communist regime.

Josef Dvořák was born on the 10th of November 1952 to a farming family in ‘Telecí’, a fitting name that means the ‘Calf Village’, on the border of the Czech Highlands.

We want to thank Josef for his pioneering work and invaluable teachings. We wish him many happy returns on his future journeys.
The Aberdeen-Angus Breeders Association in Portugal has more than 300 associated breeders spread all over the Iberian Peninsula and the Azores islands. At the end of the first quarter of 2022, there were 9,935 animals registered in the herd book, of these, 4,634 were breeding cows.

Besides the herd book, the Association manages the certified beef scheme, Aberdeen-Angus Portugal Carne Controlada. Each year almost 10,000 animals are verified, resulting in 7,000 certified carcasses. In addition, the registration and control of the Aberdeen-Angus cross-bred animals totalled 45,000 in 2021.

Breedplan is the genetic evaluation system. To be registered in the herd book, animals must be phenotype-checked and parentage verified by DNA analysis. We also check all the potential M1 carriers, excluding the sires that are carriers.

The breeders are visited at least once a year (90% of them have two visits annually), and the technicians check the animals’ weights and vital measurements. They also collect hair samples for parentage verification or genetic conditions testing. There is also a scanning service done once a year by an ABRI-accredited ultrasound scanning technician.

Annually, Aberdeen-Angus Portugal organises a bull performance test. The animals are weighed every 21 days during a 120-day testing period, in which all the feed is controlled. This enables the bull’s average daily gain, feed efficiency and residual feed intake to be evaluated.

The animals are also measured, scanned and genomic tested. The approved animals are presented at an auction that usually takes place at the beginning of January.

Last September, the Association organised the 4th Iberian Show, judged by William McLaren. We had 18 breeders from Portugal (Mainland and Azores) and Spain participate, with more than 100 animals on show. It was a big event and an excellent opportunity to promote the breed and the top-quality animals bred in Portugal and Spain.

This year will be another mark in the history of the Association with the construction of the Aberdeen-Angus Performance Station. This will allow more bulls to be tested and offer a range of tests and services.

The herd book is open to European breeders. Our main goal is to provide breeders with the best information for their breeding decisions and the buyers and consumers with a top-quality and reliable product, whether it’s beef or breeding animals.

Aberdeen-Angus Portuguese Herd-Book

- Open to EU Countries
- BreedPlan Evaluation
- Scanning
- Station Performance Tests
- Genomic Evaluation

Switch to pedigree Aberdeen-Angus brings joy back to cattle enterprise on Herefordshire farm

A move away from labour-intensive continental cross cows to a herd of pedigree Aberdeen-Angus cattle has brought the joy back to keeping cattle for one Herefordshire farming family. The Gilbert family – Harry and his brother George, alongside their father Nick and uncle Phil – are fourth generation tenant farmers at Nantygglasdwr Farms near Hay-on-Wye.

They run a mixed livestock and arable enterprise at the 223 ha (550-acre) farm, which is home to the 60-cow pedigree herd of Aberdeen-Angus cattle under the Harewood prefix, a 1,000-ewe sheep enterprise comprising a mix of Suffolk cross Mules and Hardy Speckled ewes, and 81 ha (200 acres) of cropping. An interest in achieving a high-health status for their Speckled ewes, and 81 ha (200 acres) of cropping.

The Gilberts started their Aberdeen-Angus herd by purchasing 18 maiden heifers in 2018, comprising 12 from Rosemead and six from Dark Lane.

“We bought these 18 pedigree Aberdeen-Angus heifers as a bit of an experiment and we calved them at two-years-old in the spring of 2019,” says Harry.

“We All’d them to an Aberdeen-Angus sire – Australian bull Millah Murrah Klooney K42 – and then we swept up with an old Limousin bull we had.”

Harry says the family was instantly impressed with the introduction of Aberdeen-Angus cattle to the farm. He says: “Straight away we noticed a massive difference in calving ease and with the quietness of the cows.

“The vigour of the calves also stood out massively. We pretty much fell in love with them straight away.”

The family had grown to dread calving their old cattle as they often had to assist cows or tube-feed calves in the middle of the night.

However, the Aberdeen-Angus heifers impressed the Gilberts so much that a further 10 maiden heifers were bought from Dark Lane in 2019 alongside a bull from the Oakchurch herd – and all the commercial cattle were sold.

CHANGE IN FOCUS

The introduction of Aberdeen-Angus cattle to Nantygglasdwr Farms did not just mark a change in breeds but also a shift in focus for the farm’s beef enterprise. It has moved away from producing calves for finishing on the farm to primarily producing breeding stock to sell to other farmers.

All bulls were previously kept entire, finished at 15-16 months and sent to ABP, with heifers finished at 18-20 months and sent to ABP or local butchers’ shops.

“The focus is now on producing breeding stock, and anything unsuitable for breeding is finished on-farm, with bulls going to ABP and all finished heifers going to the local butcher.”

Harry says: “The finishing times have remained unchanged, however, the quantity of concentrates needed has significantly reduced. “When we went into Aberdeen-Angus, we quickly found out that there was quite a market for bulls,” adds Harry.

“In the last two years, we’ve sold over 20 bulls for breeding, and we’ve also found a massive demand for heifers already.”

All cattle are kept out at grass from the end of March until December, depending on the weather, and the calving period runs throughout February and March.

Cows are given straw while out at grass for a month after their calves are weaned in November, and once housed, they get straw and minimal silage until calving. They are then fed better quality silage once they have calved.

“Just on feed alone, they cost us about £2,000 less to keep during the winter housing period, in comparison to 18 of our continental cows, primarily because they were on straw rather than good quality silage.

“Our old cows were very hungry, but one thing we’ve noticed with the Aberdeen-Angus is that they stay fit; our heifers and his calves averaged 34kg birthweight for 24-month-old heifers and 39kg for cows.”

And from a financial perspective, Harry says the Aberdeen-Angus cattle require much less feeding than the farm’s continental cross cows did in the past.

“When we bought those first 18 heifers, I did a bit of a trial on them that winter,” adds Harry.

“Just on feed alone, they cost us about £2,000 less to keep during the winter housing period, in comparison to 18 of our continental cows, primarily because they were on straw rather than good quality silage.

“Just on feed alone, they cost us about £2,000 less to keep during the winter housing period, in comparison to 18 of our continental cows, primarily because they were on straw rather than good quality silage.”

FUTURE PLANS

In the future, the Gilberts hope to increase the size of the Harewood herd to between 80 and 100 cows, and they hope to bring a couple of bulls to the Southern Show and Sale in Worcester this year while continuing their high-health status of being Johnes level 1, BVD and IBR accredited.

“I think with the challenges that the farming industry is facing with ever-rising input costs, the less intensive Aberdeen-Angus cow can only be for the better as they still can thrive with substantially fewer inputs,” adds Harry.

“We can see the Aberdeen-Angus playing a big part in our farm business going forward and producing beef that’s fit for the future.”

FACEBOOK: HAREWOOD ANGUS

www.aberdeen-angus.co.uk
The Evanley Aberdeen-Angus herd is one of the newest herds, established in January last year (2022).

Run by husband-and-wife Carwyn and Kim Evans and their son Ethan, the herd consists of 35 Aberdeen-Angus cows and their calves, nine heifers and a junior stock bull.

The family had always dreamed of establishing a small herd on Kim's father's farm, which is managed by a local dairy farmer. However, with the couple working full time – Carwyn on a large dairy and arable farm and Kim as a Deputy Head Veterinary Nurse, the dream was pushed aside.

That was until their neighbours approached them to see whether they would be interested in renting their 122ha (301 acres) farm and investing in the machinery and the Aberdeen-Angus herd, as they wanted to take a step back.

Mrs Evans says: “We knew how rare opportunities like this come around, and we were truly taken back. Their herd had always been a topic of conversation at home, seeing them on the land, how good they looked and how brilliant their temperament was.

“Carwyn and I were brought up on farms, so we knew how hard farming could be. However, this decision wasn’t taken lightly and wasn’t solely about Carwyn and me. Our son Ethan who was 12 at the time and who already lives and breathes all things agriculture, would be a massive part of this new venture and we would be reliant on his help too.”

After some long conversations and support from their family, the Evans’ accepted the proposition and created the ‘Evanley herd’ within two weeks of the initial discussion.

Mrs Evans says: “Our neighbour initially invested in the Nightingale herd a few years ago, so we had a fantastic and solid herd right from the start.”

A last-minute investment was made to the foundation herd, with purchases from Stirling last February. They included ten cows from the Gordon herd, three in-calf heifers from the Isle of Bute, and a maiden heifer.

Mrs Evans adds: “Calving began within 48 hours of taking over, so we had to learn about embryo transfers and registrations overnight.

“We aim to concentrate on good breeding lines and genetics and to get to know the Aberdeen-Angus community. We are also lucky to continue to learn and work with our neighbours whose advice and guidance are invaluable.”

The Evanley herd prides itself on being low input, performing well on grass, with cow’s easy calving and the ability to produce well.

Last year the Evans’ retained all heifers calved into the herd, selling all bulls privately to local dairy units at 15/16 months of age.

“The bulls sold well, so we didn’t need to consider selling through a market,” says Mrs Evans.

“We don’t have a mature stock bull at the moment: this will be something we will start to look at soon. Last year we synchronised breeding and used AI, which resulted in great conception rates. These will calve down in March / April.

“We used the junior bull on a small selection of unrelated young and smaller cows and he’s had great success rates too.”

The family also keep tack sheep all year round, providing a stable income and grazing areas of the farm unsuitable for the cows.

Mrs Evans adds: “2022 was a fantastic year, and we have learnt so much. Not just all the practical things, but learning about the breed, how to run a business, manage our finances and all the paperwork bits that come along with it. We honestly wouldn’t change any of it and look forward to what this year offers.”

February 2022 took the YDP Senior Conference over to Northern Ireland, where our event was based around meat processors Foyle Foods and their local supplier farmers and their own expanding trial finishing unit.

Lead farm liaison officer, Andrew Clarke, welcomed us to the Foyle (Omagh) processing plant, where we assembled in their board room and were introduced to Aberdeen-Angus Quality Beef, a cooperative scheme established in 1999 by Ann Morrison.

The scheme provides physical inspections and DNA profiling to ensure supply chain traceability with Aberdeen-Angus sire verification and incorporates a 151 grading scale for carcasses to ensure the integrity of the final product.

Foyle also offers a semen straw of Elliot Bravo in return for a kill beast to ensure a consistent carcass through their plant.

Once donned in our blue foot coverings, white overalls, hair nets and masks, we were escorted around the whole process working backwards from packaging to the lairage. It was fascinating observing the skilled labour working very efficiently and thoroughly in the processing and packaging hall. A demonstration from one of their master butchers on breaking down a loin, plus a look at graded hanging carcasses, certainly added to the experience.

Foyle kindly supplied lunch, and during this time, we had a very informative presentation from Naomi Heron of the Foyle marketing department on effective marketing strategies.

To set the scene for the day, our YDP Chairman Will Chrystal, continued the subject of setting up a Youth Council, which had been raised at previous Senior Conferences.

Whilst enjoying our evening meal, our YDP Chairman, Will Chrystal, continued the subject of setting up a Youth Council, which had been raised at previous Senior Conferences.

WHAT IS IT?

A unique opportunity for all young folk to meet and learn from experienced cattle stockman in how to prepare cattle for show and sale, and learn cattle handling techniques.

Annually we invite along an industry specialist to attend the day to enhance the experience for the attendees in animal husbandary, health and welfare.

WHO CAN QUALIFY FOR THE YDP FINAL?

Any young person that attends a workshop can attend the Final to take part in the YDP Programme content. To enter the Final, young people need to attend a workshop in the Autumn 2022, which will consist of a series of workshops in England and Wales.

WHAT CAN I QUALIFY FOR?

A unique opportunity for all young folk to meet and learn from experienced cattle stockmen in how to prepare cattle for show and sale, and learn cattle handling techniques.

Annually we invite along an industry specialist to attend the day to enhance the experience for the attendees in animal husbandary, health and welfare.

HOW CAN I QUALIFY FOR THE YDP FINAL?

During the day you will be observed by our trainers and assessed, so that you can establish where improvements can be made. These assessments will be considered from all workshops nationwide, and 12 candidates will be selected from each area and invited to attend the YDP Final held in the Autumn. Any young person that attends a workshop can attend the Final to take part in workshops and observe, along the selected finalists.

WHY?

You will learn new skills, meet new friends, have fun and build confidence in your ability to handle cattle. It is an excellent opportunity for young folk considering making agriculture their choice of profession or if you are looking to establish your own herd of cattle.

TAKING PART IN THE YOUTH DEVELOPMENT PROGRAMME

Please complete the booking form via www.aberdeen-angus.co.uk/youth-development. You can attend as many workshops as you wish.

What is always so impressive about those attending the Senior Conference is the expansion of talent and willingness to grow as an individual whilst making new acquaintances and having fun. We hope that other young people can be encouraged to join in future events, as all are welcome over the age of 18 years.

Thank you and best of luck to all our 2022 customers
Our YDP finalists went from strength to strength in 2022, despite being unable to compete for two years.

On Friday 30th September, 34 finalists aged between 8-24 arrived from all corners of the UK and Ireland at Airth Castle Hotel for the evening gathering before the YDP final at Westerton Farm, Cowie, Stirlingshire. The final was hosted by Mr and Mrs Dick and their daughter Steph, Scotland area coordinator for YDP.

The enthusiasm and skills of all competitors over the weekend were unbelievable, considering, for most of them, it was their first time to do the YDP. Going into 2023, it can only go from strength to strength.

Niall Lynch - YDP Coordinator Ireland

Once presented with their blue shirts, society ties and YDP black hoodies, they were ready and equipped for the competition to begin the following morning.

Divided into their age groups, the young people embarked upon the full programme for the day with determination, skill and commitment to win. The day included a panel interview for the seniors, whilst the intermediates had to give a presentation on “why are there so many different types of Aberdeen Angus cattle?” Judges included Angus Stovold, Eustace Burke and there so many different types of Aberdeen Angus cattle’. Judges included Angus Stovold, Eustace Burke and Duncan Morrison. Plus, the following:

Ring craft and changing halters Judged by Carol Rettie
Clipping Judged by Andrew Hughes
Dressing and grooming Judged by Shane Murphy
Stock judging Judged by Dallas Allan

In between the competitive elements were workshops including:

- Know your cows Charlie Maclaren
- Fertility and breeding Gavin Tait, AB Europe
- Halter making Dougie Macbeth

Our panel judges were very impressed with the strength of ability, knowledge and maturity of our seniors and intermediates, prompting our President to endeavour to secure further opportunities for them in their future development.

Congratulations to our first and second-placed panel seniors, John Smyth and Catherine Smyth, who were invited to attend the British Cattle Breeders Conference this month (Jan 2023). Following the long day of competition, a formal presentation dinner was held at Airth Castle Hotel. Our President, Angus Stovold, delighted us with an amusing speech and followed with the day’s results and awards presentation.

Congratulations to our overall first and second-placed seniors, Nicola Howie and Seonaid McLaren, who the President and YDP Chairman invited to attend the next Aberdeen-Angus Cattle Society council meeting to introduce and promote the establishment of the new Youth Council.

It was an immensely satisfying and proud moment for the YDP Team, Steph Dick (Scotland), Niall Lynch (Ireland) and myself, Tina Russell (England and Wales), along with our Chairman Will Chrystal, to witness all the development of friendships, confidence and comradery between the 34 young folk, as a result of their experience over the 48 hours prior.

The scale of this event is immense and cannot be achieved without the goodwill and generosity of fellow Angus breeders and friends. We thank our skilled judges and workshop leaders for giving up their time and sharing their knowledge.

Special thanks must be paid to Carol and Richard Rettie, along with William and Seonaid McLaren, for providing equipment and livestock for the day’s events and, of course, to the Dick family for all the preparations in advance and for letting us take over their family farm for the day.

It was a great weekend with many new friends made. Our son Kieran has had a great time and learned lots to assist him in the coming years.”

Ger Ryan

Will Chrystal – Chair of YDP

Because you have all helped in the learning, providing your experience and creating the experience for the competitors. Thank you.

Will Chrystal – Chair of YDP

It was a great weekend with many new friends made. Our son Kieran has had a great time and learned lots to assist him in the coming years.”

Ger Ryan

What a final! Best one I’ve ever been to! Well organised from start to finish, this is our son’s first time and he’s loved every minute, thank you.

It fills me with pride that the team has pulled this amazing weekend together, so a massive pat on the back from me. I had the opportunity to sit in on the panel, and again, it amazes me when the young people have that level of enthusiasm and sheer guts to stand in front of the panel and say their piece. So very well done to you all. All area coordinators are extremely proud and impressed by their remarkable positive attitude and friendly rivalry throughout the weekend.

Looking forward, your YDP Coordinators are planning their dates and venues for this year’s workshops to find our next finalists in autumn 2023, which will be held in England.

Meet the 2022 YDP champion

Twenty-one-year-old Nicola Howie from Aberdeenshire scooped last year’s overall champion at the YDP Senior finals. We learn about her association with the Aberdeen-Angus breed and what it is like to be crowned champion.

I am very grateful to be the 2022 winner of the YDP final, but it hasn’t happened overnight. I work on the family farm where we run 20 Aberdeen-Angus cows, calves, and youngstock.

I attended my first YDP workshop at eight years old and have done a workshop almost every year since.

The YDP final in 2022, held at Stephanie Dick’s farm in Stirling, was brilliantly run and organised by the YDP coordinators. They made sure we still had fun with our friends while competing.

I have learnt so much from YDP and, most importantly, made many new friends. The one thing I would say to people who aren’t sure about doing YDP, the friends you make at workshops and senior conferences are definitely for life.

Last year I participated in many shows all over the country with our cattle and was asked to show for other herds too. The highlight was showing our own bull at Stirling bull sales. He did amazingly and sold for 8,000gns to a pedigree herd down south. We are excited to see what he does.

I’m sure you all know that winning the Senior YDP comes with the brilliant prize of epic bragging rights plus a £1,500 travel bursary. I cannot wait to go exploring the world with that money. My dream has always been to travel around North America, seeing how they breed and turnout cattle over there. I have a few farms in mind already that I want to visit. I cannot wait to see what opportunities my trip and winning the final will bring for me.
How the YDP is benefitting the next generation

The Aberdeen-Angus Youth Development Programme (YDP) is the perfect platform for 8-24-year-olds to learn about and experience the cattle breeding industry. We meet some of this year’s Intermediate and Senior members.

INTERMEDIATE MEMBERS

Name: Ciáidhna Smith
Age: 15
Location: Oldcastle, Co Meath, Ireland

I learned about the YDP as a workshop was held on my neighbour’s farm, John Mac Enroe, from the Liss Aberdeen-Angus herd. John knew I was interested in farming and asked me if I would like to attend to learn about showing cattle.

During the workshop day, I learned how to clip cattle, show cattle, stock judge, and dress and groom cattle. However, one of the biggest things I learned from the workshop was how to handle cattle, approach cattle and give them respect.

Seeing how much I enjoyed and was interested in showing, John asked me to help him at shows throughout the summer. I attended shows in Mullingar, Oldcastle, Tuam, Virginia and finally Trim. I also attended the Premier Calf Show and Sale in Thurles, County Tipperary, for the weekend to help.

The YDP 2022 finals were held in Stirling, Scotland, on Stephanie Dicks farm, competed in the intermediate section. My experience from the final was very positive and enjoyable. It was great to meet other people from Ireland, Scotland, England and Wales who share my interests.

Over the next few years, my ambition is to have my own cattle to show and return to compete in the YDP finals.

Name: William Ashworth
Age: 15
Location: Bolton, Manchester

We farm a 33.5ha (83-acre) poultry unit and pedigree beef farm. My herd prefix is Blackbird, Aberdeen-Angus and Stoneyelan Angus and we also have a Charolais herd.

I learned about the YDP workshops as a member of the Aberdeen-Angus Society. I attended the workshop at Owen Tunney’s farms, home to the Marquis Aberdeen Angus herd. I attended the workshop at Owen Tunney’s farms, home to the Marquis Aberdeen Angus herd. I attended the workshop at Owen Tunney’s farms, home to the Marquis Aberdeen Angus herd. I attended the workshop at Owen Tunney’s farms, home to the Marquis Aberdeen Angus herd.

At the YDP final in Stirling, I got placed third in ringcraft, dressing and handling and second in clipping, which I was extremely pleased with. Clipping and dressing the animal in one hour was my favourite part of the final. This year I attended a few shows. The biggest one was the Great Yorkshire, where I won champion young handler. One of our bulls also had a successful show.

Over the next few years, I want to increase my herd numbers and breed more bulls of a good enough standard to go into pedigree herds and make a huge difference in other people’s herds.

SENSR MEMBERS

Name: Rebecca John
Age: 22
Location: Pembroke, Shires, Wales

I am new to the Aberdeen-Angus breed, having established the Whitcastle herd with my partner Ben Reynolds in 2021 with a purchases of a Nightingale cow and her heifer calf. We have since added to the foundation of our herd with additions from the Bletack, Pegasus and Retties herds.

My farming background is dairy, and I have been working full-time on the family dairy farm since 2021 after graduating from Aberystwyth University with a degree in Agriculture and Business Management.

My interest in beef began when I met Ben when I was seventeen, who shared his knowledge and passion for pedigree beef by involving me in working and showing his Welsh Black cattle.

I saw a post on Facebook advertising a YDP workshop. After seeing this, I went onto the Society website to learn more about the programme. The YDP sounded like a great way to begin my journey with the Aberdeen-Angus. So, I enrolled on the programme and signed up for a workshop shortly afterwards.

The Denning family hosted the YDP workshop I attended at Temple Farm in April 2022. The day began with a talk by local vets on the safe use of medicine, followed by stock judging, washing, clipping and ringcraft. We also had the chance to learn how to make a halter. I thoroughly enjoyed meeting other young breeders and having the opportunity to see a fantastic herd of cattle. I left the workshop feeling more confident and excited to put the new skills I had learnt into practice.

I was thrilled to qualify to represent the senior England and Wales team in the 2022 YDP final held at Westerton Farm and hosted by the D&G family. This day of the final started with the panel interview, followed by clipping and dressing a bull. Following the clipping, we had a presentation over lunch from AE Europe about breeding and fertility. It was a very informative presentation. I found learning more about embryos particularly interesting. We then moved on to compete in ringcraft. Our last task was stock judging. We judged a class of four exceptional heifers. To end the day, we had a very interesting talk about showing your cattle. A big thanks to everyone who worked hard to make the weekend a success.

One of my main ambitions for the future is to establish a respected reputation for the Whitcastle and our Plan B dairy herd. My goal with both herds is to be able to breed cattle which are highly productive and also have show potential.

Name: John Smyth
Age: 20
Location: Mountnugent, County Cavan, Ireland

I farm at home alongside my father, Noel, where we run commercial suckler cows alongside our pedigree Limousin herd, which is bred under the Grenee prefix. We recently established an Aberdeen-Angus herd which will operate under the Ballinrink prefix after the purchase of our foundation female Liss Dina X049 from the Liss herd I currently run, in my third year studying a level 6 BSc Hons of Agricultural Science, working for a farm machinery dealership alongside farming.

I learned about the YDP in 2015 from Dermot Lynch while attending the annual Gogarston Angus bull sale. I participated in a workshop on the farm of John McEnroe, who runs the Liss herd, and I was fortunate to qualify for the finals that year as a junior. Following on from this, in 2019, I was fortunate to qualify for the YDP finals and placed first in the intermediate section. I qualified in 2021 at a workshop in Liss. Meeting and getting to know new people is my favourite thing at the workshops, alongside picking up tips from the experienced coordinators and trainers.

The 2022 final was an enjoyable experience and a great opportunity to meet new people, learn new skills, and improve on some.

Over the next three years, I aim to complete my degree and qualification while expanding our recently established Aberdeen-Angus herd. In addition, I intend to continue participating in the Aberdeen Angus YDP. It would be a remarkable achievement to win the senior section of the YDP and travel with the help of the £1,500 bursary.

The summer of 2022 was spent exhibiting under the Liss prefix. The highlight of the year was at the Irish Aberdeen-Angus Association Autumn Extravaganza where they sold nine heifers to a £4,000 average and topped the male trade with Liss Bruno Y120 at €10,500 at only 10 months old.

I strongly encourage anyone who has an interest in livestock to take part in the Aberdeen-Angus YDP as it has opened many doors for me and given me invaluable experience.
New online portal for member services

We are pleased to announce that we are moving the majority of member services to a new online portal – ILR Online. This should allow for easier and simpler online access to member features including:

- Simpler calf registrations
- Herd inventory maintenance and management
- Performance data entry
- Animal transfers
- Viewing and download of lists of animals and customers
- Reviewing billing information

While the platform is intended to be accessed via a computer or laptop, it will rescale for a mobile browser, allowing for quick access on the go. Members will also be able to pay by credit card for services online, such as calf registrations.

There will be a gradual roll-out of the new platform to members over the next 6-months and a step-by-step user guide and webinar will be made available to support the transition.
In February, one of the most celebrated names in the breed can celebrate the 100th anniversary of the birth of the first calf the family registered with the Society. Another famous family can do the same with a birth registered in 1926.

So who has achieved that milestone? Not an easy thing to find out for two reasons:

Firstly, the Society has never maintained a comprehensive list of members. The membership number every member has today only dates back to about the 1960s, and as there were over 5,500 breeders who registered cattle between the years 1928 and 1960, all of whom should have been members, it is obvious our numbers (mine from the mid-1990s is 3,588) are woefully low.

Secondly, although the herd books contain the information, they were designed to help people find cattle. They were not how we use them today, a way to trace pedigrees or research the breed's history. The breed and its breeders go back way beyond the herd book records.

Even the introduction of a herd book, first put forward in the 1840s, was pretty shaky. All the material collected by Edward Ravenscroft went up in smoke when the Highland and Agricultural Society's Museum in Edinburgh burned down in 1851, which means that when the first volume finally appeared in 1862, it could not have been either as comprehensive or accurate as it would have been. It was another ten years before a second volume came out. By 1879/1880, there had only been five volumes produced. Only then did they become the annual production we know today.

THE HERDS

Apologies for any I have missed out or mistakenly included. A great deal is commonly known about many of these herds. Unfortunately, there isn’t the space, nor am I competent, to sing their praises again, so I have attempted to bring out something that most of us didn’t know: I hope I have got it correct. Please remember the Society’s rules have evolved: what was allowed in the past is not always so today.

BALLINDALLOCH: Originally in Elginshire, then in Banffshire and now in Morayshire, although it has never moved. Far older than herd book records go back, but whose records start with a birth in 1855. This is the oldest herd still active within the Society. Even if registrations dropped to very low numbers on a couple of occasions, it has almost certainly registered more cattle than any other herd in the British Isles. The contribution of the Macpherson-Grant family has been outstanding. Sir George, who was so influential in founding the Society, and became its first President, was vehemently opposed to closing the herd book and changing the Society’s name from The Polled Cattle Society to The Aberdeen-Angus Cattle Society. The reason for this can be seen by a look at the herd book, which shows that one year about a quarter of all the herd book registrations and breeders were within twenty miles of Ballindalloch, along the Morayshire/Banffshire border. One cannot help thinking that he knew just how many cattle, typical of the breed, were to be found outside the area of Aberdeen and Angus and so was instrumental in trying to get as many of the local pure polled cattle registered as possible.

PORTLETHEN: Just south of Aberdeen, the steading can be seen from the railway station. We have yet to find the date of birth of the first cow recorded by the Walkers. The dam of a bull born in 1818 was the earliest date of birth recorded in the herd book. We believe Robert Walker, who witnessed that birth (he had just been sent as a fourteen-year-old to work on the farm where the bull was born), was a prodigious record-keeper, so it is disappointing that his records were almost certainly lost in the Edinburgh fire. Nevertheless, the family continued to register cattle until 1927 with varying degrees of enthusiasm.
SPOTT and INVERQUHARTY: Where the hills meet the low ground in what was Forfarshire and now is Angus. There appear to have been quite a few Whytes farming within the area. This line first registered cattle at Spott in Glen Prosen in 1864 before uniting with Inverquhart. Other Whytes had also registered black cattle, later withdrawing back to Spott with their last calf registered in 1972.

BANKS: The Beddie family were successful breeders in the north-east of Aberdeenshire, first registering cattle in 1874 and just making the hundred years with their last calf registered in 1975. They produced a huge family of Gammers and Gaffers (grandmothers and grandfathers to those from outwith Scotland).

ESSELMONT and YTHAN: The Wolridge Gordons from near Ellon in Aberdeenshire were an army family and many of the names they used reflected the campaigns and postings they experienced. Starting in 1882, the last calf they registered was born in 1889.

THEAKSTON: The second oldest herd still in existence, it stands on the western side of the A1 in Bedale, Yorkshire. It has also been a horse racing stud since the 1890s (Dante stood there). Starting in 1885 at Hollingside, Newcastle-on-Tyne and moving briefly to the Neasham Stud Farm, Darlington, the McIntyre family have been registering births at Theakston since 1894. This is a herd which few people today know of, yet it provided the Society with a council member in the days when very few members outside Scotland managed to achieve that and exported cattle to just about every continent in the world.

AYNH: The one that everyone adds the suffix ‘if that’s how you pronounce it’ and the response is “I think so.” Third oldest overall and second oldest in England. The McLaren family registered very few bull calves for long stretches but always a steady number of females.

KNOCK: The only Irish herd in this list. Irish herds have been there ever since Volume One. The two breeders found in the first volume both married girls from Forfarshire. Could they have picked them up at the mart, or was it a case of if you want to sleep well, you had better buy a few black cattle? The Jeffery family owned the Knock herd, which registered births from 1905 to 2020 at Rathcourshey and, later, Ballyvodock, Midleton, Co. Cork.

WEDDERLIE: Not just one family and not yet 100 years of continuous membership. The herd was started by Major W A Baird in 1914. When he died in 1936, his son did not become a member until 1941, just before he sold Wedderlie, with the herd, to Captain Elliot in 1942. Some cattle born and sold during that period appear in the herd book, but all were registered by the purchasers, not Wedderlie. Captain Elliot, of the family that had, and still has, the Cape Wrath herd, already had his own herd. Thistlelaine, and bought this herd for his son, who unfortunately died during the war. The Wedderlie cattle were registered by Captain Elliot’s wife until the herd was given to one of his daughters after her marriage, and Mrs Jenny Campbell, left the herd to her daughter Marion (Tilson). As we all know, the herd is still thriving.

SCOTSMILL: If you ask the Society, this herd is not 100 years old. The Lawson family have bred black cattle in Tullynesslie, just north of Alford, Aberdeenshire, since at least 1875, when their first calf was registered, a couple of calves were registered in 1884 and 1886, and regular registrations began in 1908. Then, in the late 1970s, their farming policy changed. Cattle were reduced to making use of land unsuitable for cropping and the cows were put to a Charolais bull, with the last Aberdeen-Angus calf registered being born in 1977. However, in 1992 registration of calves began again and continues today.

THREE HERDS ARE APPROACHING THE ONE-HUNDRED-YEAR MARK:

AUCHINCRIEVE: Starting with a calf born on 8th March 1923 at Guise in the Howe of Alford, Aberdeenshire, Charles McCombie moved to Rothemay in Banffshire during the second world war. The family descends from a cousin of the famous William McCombie. The herd book records that Charles McCombie sold a pedigree bull before 1923, but it was one he had bought. He is first recorded as a member of the Society in the 1923/4 volume.

KILHAM: In Northumberland, just south of the border between Scotland and England and property of the Goossin family. Perhaps not so widely known as the other two herds that are due to celebrate their centenary, but still one which had some export success, and Sir Alfred was President of the Society in 1949. Their first calf was registered in 1925.

NETHERTON: Three quite substantial herds, each having some success with exports, used the name Netherton. The most successful, and the one near to its centenary, is that of the McLaren family. By the time the McLaren’s moved to Netherton from Drumhead, also in Blackford, Perthshire, one of the others had already moved from Netherton, Aberlour, to Advie (both Banffshire) and between Scotland and England and property of the Goodson family. Perhaps not so widely known as the other two herds that are due to celebrate their centenary, but still one which had some export success, and Sir Alfred was President of the Society in 1949. Their first calf was registered in 1925.

NETHERTON: Three quite substantial herds, each having some success with exports, used the name Netherton. The most successful, and the one near to its centenary, is that of the McLaren family. By the time the McLaren’s moved to Netherton from Drumhead, also in Blackford, Perthshire, one of the others had already moved from Netherton, Aberlour, to Advie (both Banffshire) and used that name instead. Note to John Deere drivers in the East of Scotland: the tattoo letters assigned to this Netherton were HRN. The third Netherton herd started at almost precisely the same time the McLaren’s moved to Netherton. It was at the Netherton Training School (for bad lads) near Morpeth in Northumberland. The McLaren’s first registered calf was born on 4th December 1926, but curiously, they do not appear in the list of members until the 1944/5 volume, but keep that to yourself, or Angela could be calling around for 18 of the one guinea fees (a guinea would get you about twenty pints of beer in 1940).

Angus Smith
William Blackhall, a much-loved Deeside farmer and former long-serving Secretary of Banchory Show, William Blackhall, died last January aged 86.

William, Bill or Willie, as he was variously known to his family and many friends, was a pillar of his local community and served as Secretary of the show for 24 years from 1963 until 1993.

His affinity with livestock and the Aberdeen-Angus breed started as a teenager when his favourite pastime was pretending to be an auctioneer and conducting mock auctions of cattle from his father’s pedigree Aberdeen-Angus herd.

He worked at home with his father before acquiring the nearby farm of Bofgorn, Maryculter, where he worked hard in the early days to improve boggy, stony and heavy land with an extensive programme of drainage and removal of boulders, and continued to farm there throughout his life.

His passion was Border Leicester sheep and he was highly respected as a breeder and judge, supplying rams all over the country to a register of 76 who trusted his judgement to send them rams to suit their purpose.

He served on the council for the Border Leicester Sheep Society for many years and judged the breed’s national show at Carlisle in 1939.

His interest in the Aberdeen-Angus breed remained throughout his life, although he didn’t indulge in pedigree or showmanship activities.

Ian worked on the farm on leaving school and had a part-time job with Aberdeen and Northern Marts at Maud and Aberdeen marts.

In 1980, he decided to leave the farm to concentrate on his passion for bringing out show cattle, working with Neil Barclay’s Charolais herd at Harstone, Banchory.

The move to Inverurie came in 2001 when he decided to concentrate on becoming a freelance stockman, working for many pedigree herds regularly, most notably Hamish and Margaret Scorer’s Devon Cross Aberdeen-Angus herd at Denhead of Dunlugas, Turriff.

Despite adversity to travel, he became known as the ‘Flying Stockman’ when Susan and Harry Widdicombe invited him to prepare the bulls from their Starline Simmental herd near Exeter for the Stirling bull sales after Henry was injured.

Willie fitted a lot into his busy life and was working almost right to the end, completing a fascinating pictorial history of the Aberdeen-Angus breed shortly before his death, just a few weeks short of his 90th birthday.

The Douneside herd was prominent at the summer shows under Henry’s stewardship. Successes included the supreme championship at the Royal High Golf Show, Rowland (Roley). Fraser, died at the age of 91 last autumn.

Roley was a descendant of J M Fraser, who, with a Mr Macdonald, founded the Perth auction firm of Macdonald Fraser in 1876. This grew to become the leading auctioneers of pedigree cattle in Scotland.

Roley joined the family firm in the 1950s and succeeded in the early 1960s following the retirement of his father, Lovat Fraser, and his uncle, Harry Fraser.

He had an innovative and entrepreneurial spirit and went on to forge relationships with other auction companies, such as Scottish Auctioneers, to form Stirling and Corsoan of Oban, to create what became United Auctions (UA).

Roley also expanded the company’s activities to include property and insurance broking. McDonald Fraser, for many years, acted as the official auctioneer to the Royal Smithfield Show in London.

A significant move in 1990 saw the opening of a new mart on the outskirts of Perth.

Mr Fraser was predeceased by his wife, and daughter, Sarah-Jane, and is survived by his daughter, Nira, her husband, Walter Alexander, and two sons, Mark and Simon.

William Blackhall was a much-loved Deeside farmer and former long-serving Secretary of Banchory Show, William Blackhall, died last January aged 86.
Organic | Closed Herd | SAC Premium Health

(Accredited BVD, IBR, Lepto and Johnes Level 1)

Grain Free and grown on grass alone.
Cows selected for maternal performance, conformation and temperament.
Recent herd sires are Wedderlie, Fordal and Ribble. Bloodstock for sale.

**Fees and Charges (UK) - from January 1st 2023**

### Membership subscription (life):
- £750

### Membership subscription (annual):
- £30

### Junior membership (annual):
- £15

### Herd book registration - late entries (see Byelaw 6 (b))

- **Herd book registration – males:**
  - Up to 6 months of age and intimated within 60 days: £30 if submitted online. £35 if submitted on a paper form.
  - From 6 months to 12 months of age: £50 fixed fee.
  - Any registrations of male calves being processed for animals over 12 months of age will be subject to the charges in the table.

- **Herd book registration – females:**
  - Up to 6 months of age and intimated within 60 days: £30 if submitted online. £35 if submitted on a paper form.
  - From 6 months to 12 months of age: £50 fixed fee.
  - Any registrations of female calves being processed for animals over 12 months of age will be subject to the charges in the table.

### Animals registered after 12 months of age will be subject to the following late fee penalties.

<table>
<thead>

<td>Untested older stock bulls (born before 2020). All stock bulls must be DNA/Myostatin tested</td>
<td>TISSUE</td>
<td>50k SNP+Myostatin</td>
<td>£30</td>
</tr>
</tbody>
</table>

### Additional notes:
- Tissue samples are preferred - any hair sample submitted cannot be stored and testing will be charged at full rate.
- Stock bulls - where the sire does not have a SNP profile the calf male calves will only be tested for myostatin and profiled only. Where the sire does not have a SNP profile, male calves will be myostatin tested and run as profile only.
- Breeders should check that any stock bulls they are using have been tested on 50k SNPs.
- Lab requests for testing will be sent when the breeder nominates the animal for testing.
- Male animals will be tested for free. Females tested prior to first calving will be charged at cost. Those females that do not have a profile on file by first calving will be charged full rate for the DNA test.
- Members will get an email with a list of tests requested. Please check junk folders for these emails.
- Members will get another email when the results are uploaded to the database.
Scanning provision newly bolstered

Fifty cattle will be selected from a bigger pool of candidates, 30 of which will meet the criteria for the variation required for scanning accreditation purposes. The pool of animals will be divided into training and exam animals. Training will be provided on a one-to-one basis by the accredited scanning team of Jim Barbour, Linda McKendrick and Willie Wilson, ably assisted by Barbara.

The scanning provision for the whole of the UK has been bolstered by the new accreditation of four scanning providers. Barbara Webster of Pedigree Cattle Services oversaw the accreditation process last year between 25-26th October, held with Andrew Laughton, Louth, Lincolnshire.

Strong demand for Angus remains but threat from Wagyu looms

The demand for pedigree and commercial Aberdeen-Angus cattle shows no abating despite increased numbers coming onto the market through pedigree sales, store cattle sales and on the finished market.

The May 2022 sale in Borderway Mart, Carlisle, saw an exceptional clearance and a solid average at £4,869, up £700 on the year.

Sales of Aberdeen-Angus females have been successful with the inaugural Angus Fever Sale (in conjunction with Dowbiggin Marketing) held in November 2021, setting the pace to average £7,086.75 and selling to a top of 29,000gns for Retties Lady Ruth from James Rettie.

This was followed on the same day by the HW Angus 10th Anniversary Sale, which was met with great interest with HW Blackbird selling with her bull calf at foot for 9,500gns.

October 2022 saw the return of HW Aberdeen-Angus with the Matrons Sale. This provided another wonderful run of naturally reared cattle and was met with great interest. Although it didn’t quite hit the heights of the 2021 sale, the averages levelled out at £3,400 for the 59 cows in calf or suckling, with served heifers averaging £2,789.

Online bidding played a huge part in the sale, with several Irish customers, both North and Republic, operating. The next instalment of Angus Fever is planned to take place on Friday, 21st January 2023, in Carlisle and will once again be conducted in conjunction with Dowbiggin Marketing.

On a commercial note, as the UK’s suckler herd continues to come under pressure from increasing input costs and demand for forestry planting, it is clear something needs to change. Unless our new DEFRA Secretary of State, reintroduces a headage payment to keep suckler cows on the hills, the future of our red meat industry will depend on the supply of beef from the dairy herd.

This is where the Aberdeen-Angus can further increase its foothold in the market. However, success in this market is not a given. It will require Aberdeen-Angus breeders and the dairy industry to recognise that they must combine to produce the quality of cattle that fits the supermarket specification for carcase weight, grade, and finish. At the same time, they must also tick the boxes for the dairy farmer’s management system.

No longer should the dairy farmer be the outlet for cheaper, second-quality Aberdeen-Angus bulls. Instead, bulls with growth, ease of fleshing and good conformation must be selected to secure a premium price for their calves, sticks or store cattle so that an Aberdeen-Angus bull is at the top of the dairy farmers’ shopping list.

The new competition in this market comes in the shape of Wagyu, with its short gestation, easy calving and guaranteed price for the calf. With the price of liquid milk at the present level, every day of production and every litre is required to offset increased costs. Angus breeders must know that Wagyu is a serious threat to their position in the market. They must gear themselves to produce cattle that make Angus the preferred option for the dairy farmer. They must promote the fact that the breed offers more marketing alternatives for both male and female calves, as well as significant demand from most major retailers for what is a world-recognised product. Failure to do this could put the dairy market share at risk.

Scott Donaldson, Managing Director and Auctioneer, Harrison & Hetherington
Strong demand for Aberdeen-Angus at Stirling sales

After two long years of varying sales formats due to covid restrictions, it was refreshing to fully return to showcasing breeders’ livestock in the ring last year.

The Aberdeen-Angus breed kicked off 2022 in style with a tremendous entry at the February Stirling bull sales, with 29 more bulls being sold on the year, resulting in 95 bulls selling to average £6,533 (+£34). This was accompanied by a top call, leading all the breeds, of 38,000gns for the Massie family’s Bellock Dean Martin W063, followed by a second top of 30,000gns for Duncanziemere Jacobite W374 from the Clark family.

The May event saw an increased entry of bulls forward, with a demand for stronger bulls ready to go straight to work. This was followed by the much-anticipated dispersal of the Shadwell herd held down at Skipton, which showcased the large demand for top-quality female genetics within the breed with records smashed. Leading the way was Shadwell Lady Heather P738 and her stunning heifer calf Lady Heather Y292 at 28,000gns. However, the in-calf heifers and maiden heifers stole the show, averaging a record £9,400 and £10,500, respectively.

It is always sad to mark the end of an era, with some noted herds dispersing over the last few years. However, it is encouraging to see such investment from breeders when these genetics become available.

So many new members within the Aberdeen-Angus community are developing new herds and coming to the forefront on the show and sale circuits in their own rights.

Last October, the Stirling bull sales attracted a packed catalogue of the finest Aberdeen-Angus bloodlines. The females stole the limelight with three collective sales from the Gordon, Rulemans and Retties herds. There was a strong demand from start to finish, with a huge crowd. This culminated with a new female record of 40,000gns being achieved for Gordon Pole Star X695 on behalf of the Trustees of the Late Gordon R Brooke.

All in all, there was great confidence within the breed from both the pedigree and commercial markets last year. Breeders invested in quality stock to meet the market demands. As a result, the demand for the Aberdeen-Angus breed looks set to continue.

Raymond Kennedy
Centre records smashed at opening Stirling sale with 38,000gns top

The 2022 Aberdeen-Angus show and sale season set off with a bang at United Auctions in Stirling on Sunday 6th February, when the centre record was smashed twice and prices hit 38,000gns.

Sale day saw the Logan family’s 2010 centre record of 28,000gns for Galawater Bentley H495 broken twice.

Topping the day at 38,000gns was the show’s intermediate champion Blelack Dean Martin W063 from the Massie family at Blelack. He is one of the last Blelack animals to sell after the herd dispersed in October 2021. May 2020 born Dean Martin is a rising star by Kilmaluag Eriskay T203 and by a homebred cow, Blelack Diamond Mist U908. Eriskay also sired several of the top lots in the October sale. He headed to his new home in the Scottish Borders with the Tilson family at Wedderlie.

The second top price also broke the previous centre record with a call of 30,000gns for Duncanziemere Jacobite W374 from the Clark family at Cumnock. Jacobite had already had a good day in the show ring, coming first in his class and reserve senior champion. Jacobite is an April 2020 son out of the 13,000gns Auchincruive Exodus U285 and by Duncanziemere Jody P108.

The third top at 16,000gns was Alistair and Graeme Fraser’s Idvies Pink Prodigy W979. A May 2020 born son of Thrunton Panther S922 and by Idvies Pink Poppy P648, he sold locally after being bought by Robbie Galloway for his Cardona herd.

Realising another five-figure sum was the Wattie family’s Tonley Potter W759. He is a July 2020 born son of Tonley Jester Eric S318, who has bred the family several show winners and from Tonley Princess M866. Potter sold for 13,000gns to Daniel Whiteford for his Borewell herd at Scremerston in the Scottish Borders.

Following this was a lot from Owen Tunney’s Morpheus herd with Morpheus Kodiak W068. He realised 12,000gns to Norbreck Genetics. Kodiak is an Alı-sired April 2022-born bull by the $200,000 HF Alcatraz 60F and out of The Moss Krispy Girl N221.

Going for 11,500gns was the show’s overall reserve and junior champion, the Wattie’s Tonley Alba W781. Alba is an August 2020-born bull by Tonley Royal Legend T474, a Rawburn Elysium son and out of Tonley Annie P025. Alba headed to Devon to join the Luxtons herd on the edge of Dartmoor.

Adding to their already good day, the Clark’s saw a second bull make a five-figure call with Duncanziemere Mr Bond W388 going for 11,000gns. Mr Bond is a son of Duncanziemere Miss Belinda S213. Mr Bond heads north to Sutherland to join the Henderson’s Culrain herd.

A further two lots reached 10,000gns, the first being Eastfield Black Banjo W508 from Ewan Brewis and the family at Lemptlaw. Black Banjo is a May 2020 son of the family’s 2019 25,000gns top price purchase Linton Gilbertines Elgin T149 and out of Eastfield Blackbird K157. The final five-figure bull at 10,000gns came from the Currie family’s Kingholm herd in Dumfries. July 2020 born Kingholm Risotto W296, is the embryo son of Quaker Hill Dead Center and is out of Weeton Rosebud M349.

Averages: £6,533 for 96 bulls, up £34 on 2021.
Select trade at May Stirling
Bull sale

The 2022 May bull show and sale kicked off at United Auctions in Stirling with the show on Sunday 1st of May followed by the sale on Monday 2nd May. Trade was select but was similar to sales in 2018 and 2019, with a total of 29 bulls selling to a top of 7,000gns.

Topping the sale was Idvies Eustace W947, a March 2020 born bull from the Fraser family’s Idvies herd at Forfar. Eustace was first in his class and is sired from the Flower line sire Idvies Ferrari S752. His dam is the 2011 born Idvies Eueele L335, a productive daughter of the 24,000gns Lockerly Legolas. Eustace headed off to his new home in Caithness with the Pottinger’s at Greenland Mains.

Second top in the sale at 5,200gns was Saville Bluebird W201 from the Medley family. Bluebird is an April 2020 born bull by Weeton Evolution R447 and out of Blelack Bluebird S664 bought by the Medley’s from Blelack in 2016 for 6,300gns. He stood second in his class and headed home with the Brown family of the Drumdow herd in Ayrshire.

Also going for 5,000gns was Wrae Brave Bomber W395, a May 2020 born bull from Alexander Norrie. Bomber is out of Wrae Beautiful Bess J141 and headed to Orkney.

The final bull at 5,000gns was reserve champion, Idvies Fairfax W990. Fairfax is an October 2020 born bull sired by Linton Gilbertines President and out of a Loganbar Hallington daughter. Fairfax was the second bull to reach 10,000gns and sold to Drumhill Minor Pro X506, consigned by Jonathan and Lisa Doyle from Cumnock, Ayrshire.

Thereafter, three bulls tipped 7,000gns, with the first of which was Mosshall Red Legacy – a May 2020 born embryo transfer calf, by Drumhill Lord Hatfield, also from Jonathan and Lisa Doyle.

The second to reach over 7,000gns was Drumhill Prime Cut X155. This red coated, March 2021-born son of Mosshall Red Legacy was a first prize winner in one of the two intermediate classes, and had been much fancied, ringside.

The third bull to reach 7,500gns was Drumhill Minor Pro X506, consigned by Jonathan and Lisa Doyle from Cumnock, Ayrshire.

Trade for the October bulls at United Auctions’ Stirling bull sales was selective but solid.

The pre-sale intermediate and overall show champion, Keirsbeath Kryptonite X575 was one of two bulls to reach 7,500gns.

Consigned by Tife breeder Caroline Orr, Kryptonite, which is sired by Linton Gilbertines President and out of a Lognanbar Daviroyd dam purchased by Vaughan Farms, Kingsland, Leominster.

The second bull to reach 10,000gns was Drumhill Minor Pro X506, consigned by Jonathan and Lisa Doyle from Cookstown, Northern Ireland.

This April 2021-born junior bull had been placed reserve junior champion by the pre-sale judge, Ian MacGillivray, Eastfield of Lempitlaw, and will go to work with Gordon Gray from Ellinbank, Angus.

The Trustees of the late Gordon Brooke sold a second prize Rawburn Luhor son, Gordon Elgin X639 for 8,200gns to a Surrey breeder Jan Boomars.

Meanwhile, Aberdeen breeders Ken and Margaret Howie sold Cairnton Detroit X465 – a third prize bull with an impressive milk EBV of +16 from the same class as the champion – for 8,000gns to Lockerley Estate, Hampshire.

Cumnock breeder Alister Clark sold the second bull at 7,000gns in the form of Drumhill Prime Cut X155. He is a May 2021 born junior, which was unplaced in the last class.

Lastly, father and daughter duo Andrew and Emma Hodge’s Rulesmains Pegasus X489 lived up to its summer show circuit potential, having been placed senior and reserve overall champion, and sold to A Neish for the Rodmead herd in Warminster for 6,500gns.

In total a clearance rate of 55% was achieved and 39 bulls sold to average 5,023gns (£5,274).
Female breed record smashed at October Stirling sale

A new breed record for a female was set when Gordon Pole Star X695 went under the hammer for 40,000gns at the Stirling bull sales in October.

This May 2022-born daughter of Netherallan Peter Pershore E052 boasts some impressive figures, including a +21 milk score.

She sold having been shown at the Great Yorkshire Show, where she stood junior champion.

Put forward by the Trustees of the Late Gordon Brooke in Earlston, Berwickshire, she sold to Cheshire breeder Ken Hodge for his Greenarch herd.

The second top price for females of 15,000gns was also paid for an entry from the Gordon herd – Gordon Black Cherry X638.

An April 2021-born daughter of Rawburn Luthor T495, she had a successful show career during the summer with various wins including the interbreed championship at the Border Union Show. She sold to R Mawer and E Benge, Woodhall Spa, Lincolnshire.

In total, the Gordon herd sold 26 heifers to average £5,604.

RULESMAINS

Meanwhile, Andrew and Emma Hodge sold 26 lots in a reduction sale from their Rulesmains herd, which is based near Duns in Berwickshire.

Trade was brisk in the sale, which comprised 16 cows with spring-born calves and 10 maiden heifers – and good units were in demand selling to a top of 6,000gns.

The best at 6,000gns was Rulesmains Kelly X541 – an April 2021-born heifer by the prolific herd sire, Blelack Lord Heartford T879, who has been influential at Rulesmains.

Kelly’s dam goes back to the Kinannie line, which is breeding well for Andrew and Emma.

This heifer was purchased by Ben Marsden for his herd based near Clitheroe, Lancashire.

Best of the cows and calves was Rulesmains Princess W387, at 5,200gns. This was a first calver also by Blelack Lord Heartford, who was sold with her heifer calf at foot, and back in-calf to Rawburn Ellington W168.

In total, 26 lots from Rulesmains averaged £2,627 – 16 cows and calves averaged £2,819 and 10 heifers averaged £2,230.

RETTIES

Perthshire breeders Richard and Carol Rettie held a major reduction of their Retties herd to fund the purchase of their own holding.

The offering consisted of 36 lots, comprising 22 cows – most with calves at foot – and 14 heifers.

Trade was good, with the best cow and calf outfit selling to 7,800gns for a 2017-born Billinge Magic Jack Eric daughter and her February born-heifer calf by Retties Lark Royal. The cow sold for 2,800gns to Messrs King for the Langstilly herd in Renfrewshire, while the calf made 5,000gns selling to Brailes Livestock in Gloucestershire.

Second top price among the cow and calf outfits was Retties Pam P286, also selling with a heifer calf at foot by Brailes Fabulous, at 7,500gns.

Best among the heifers was Retties Frances X187, realising 7,500gns. Frances was also a Billinge Magic Jack Eric M176 daughter, whose dam line goes back to the Netherton Frances line.

In total, 36 Retties lots averaged £3,892 – this included 22 cows averaging £3,968 and 14 heifers averaging £3,771.

BALHELVIE

Four cows with calves at foot made up the draft of females from the Fife-based Balhelvie herd.

The best of this consignment was Balhelvie Jannette Erica U403, who sold with her March-born heifer calf at foot.

Jannette Erica is a third calver, sired by Netherton Brave, and sold at 4,000gns for the unit.

In all, the four lots averaged £2,450.
Strong trade and 9,000gns top at Carlisle’s Spring sale

The 2022 Carlisle May Bull Sale realised a high of 9,000gns and saw an 86% clearance with 51 Aberdeen-Angus bulls finding new homes to an average of £4,6912- up £497 on 2021. The sale topper was the day’s champion, Wensleydale Just Eric X053. This March 2021 born bull from Christopher Timms is by Bieblack Ensogn L796 and out of Wensleydale Janet Erica S046. He headed to his new home with Daniel Wharf’s Borewell herd at Berwick.

The second top in the sale at 7,000gns was McCormick Dakota W728, a May 2020 born bull from the McCormick Family at Newton Stewart. By the homebred sire, McCormick Evade R168, Dakota stood third in his class. Evade was also sire to McCormick Panther, who sold for 7,200gns at Stirling in May 2020 and to the baby beef champion at Beef Expo in 2021.

Following on at 6,500gns was the reserve overall champion, Stouphill Buster W339, a May 2020 born bull from the Allen family at Stouphill. Buster was first in his class and stood as senior male champion and reserve overall male champion. Buster is a Rawburn Estonian son and out of Stouphill Blossom P102. Buster headed to Essex with Hull and Partners.

Also selling for 6,500gns was Ellean Preacher W1186, an August born 2020 born son of Schivas Jason Eric U630 and out of Ellean Princess S094 from the McSporran family at Innerleithen. Preacher stood first in his class and became reserve senior male champion. Preacher headed to the Scottish Borders with AS Hogg and Partners.

The hammer fell for a final time at 6,500gns for Duncanziemere Extra X437. He is a May 2021 born bull by Auchinconere Exodus U285 bought at Carlisle in May 2019 for 13,000gns. Exodus is also the sire of Duncanziemere Jacobite W574, who sold at Stirling in February 2022 for 30,000gns. Extra joined the Windyedge herd of Robin Dunlop in Ayrshire.

Next up at 6,000gns was Tynan Emmanuel X801, a February 2021 born bull by Tynan Jester Eric S018 and out of Tynan Emline T469. Emmanuel was not shown due to Mark Wattle of the Tynan herd being the judge. Emmanuel headed to Kelso with Tom Amott for the Haymount herd.

Another Tynan bull realised 6,000gns, this time being Tynan Blandie X802, a February-born bull also by Tynan Jester Eric S318. Blandie is out of Tynan Belle T423 and headed to the Crook Rise herd.

Aberdeen-Angus females also had a good day, with an average of £1,76119 for the 28 females sold.

Southern Spring show and sale at Worcester tops at 4,500gns

Last April, the Aberdeen-Angus Society’s southern show and sale at Worcester attracted a select, if not large entry, with a cross selection of bulls, cows, calves and heifers.

As always, buyers were discerning in what they chose in the full section, whilst the pre-show overall champion, Warrenho Jet Eric W881 from AE and CR Bishop was unsold.

The third prize winner Glympton Lord Hannah W334 from Glympton Farms Ltd took pole position in the sale levelling at a creditable 4,500gns.

The long trip south for David Evans, Three Bridges, was not unrewarded when his second prize winner Three Bridges Portman W836, sold to a brisk demand reaching 4,300gns.

A smart third prize winner from P C Stovold and Son Rosemead, Mr Banns W292, found favour from the buying contingent and was knocked down at 3,000gns.

Melview Farming entered a quality female consignment in the sale and achieved a top price in that section when their notable show cow Oakchurch Duchess R212 sold for 2,800gns. She had a string of wins on her belt, including female champion at the Devon County Show and being a member of the interbreed champion group of three at the Royal Three Counties Show.

The female champion, a red maiden heifer Rosemead Red Jessica W283 from P C Stovold and Son, enjoyed some spirited bidding and was eventually sold at a level 2,000gns.

On the commercial side, auctioneer Clive Roads said the trade for Angus cross steers and heifers remained electric! “Our biweekly sales always contain a strong percentage of Angus cattle from both beef and dairy herds with literally, and no exaggeration, an “army” of strong buyers for finishing units of all sizes. There is simply not enough Angus cattle to meet demand.

“Even in these testing times, the Angus can punch above its weight as an economical producer, leaving margins that would be hard to match,” he added.

Aberdeen-Angus bulls sell to 4,400gns twice at Dungannon

There was a strong demand for pedigree Aberdeen-Angus bulls at the Breed Society’s December show and sale in 2021, hosted by Dungannon Farmers’ Mart.

Prices reached a ceiling of 4,400gns twice, with auctioneer Trevor Wylie confirming that ten bulls sold to average £3,570 per head – an increase of £1,024 on 2020 when four lots levelled at £2,546.

First-time exhibitors Andrew and Zara Clarke from Tynan, County Armagh, had a day to remember, clinching the supreme championship award and a joint top bid of 4,400gns. The August 2020 born Tynan Charles W071 TSI 44 SRI 64 was the youngest bull in the catalogue, and is bred from the herd’s sole cow, Drumgar Lodge Corona U203 – bought privately in 2019 from neighbouring pedigree breeder Brian Anderson.

Tynan Charles is one of the first sons of the Rawburn Boss Hogg N630 son, Elliot Bravo T452 to sell at auction. Scottish-bred Elliot Bravo is ranked in Breedplan’s top 100 bulls of the breed. He was purchased by the Foyle Food Group for its High Genetic Sire Scheme, an initiative aimed at encouraging Aberdeen-Angus Quality Beef Ltd producers to use superior genetics. Semen is available to AAQB members in Northern Ireland.

The pre-sale show was judged by Alwyn Armour from the Woodvale Herd in Dromara, County Down. Tynan Charles was snapped up by James Thompson from Culmore, County Londonderry.

Also on Mr Thompson’s shopping list at 4,400gns was the third placed Loughans Moaning W591 TSI 34 SRI 44 bred by former Ulster and Irish rugby ace Rory Best, and his father John, who run a 60-cow herd at Pontypanz. Born in March 2020, he was sired by the Rawburn Boss Hogg N630 son, Rawburn Jagger Eric R094, and is out of a home-bred dam by Prospect Lord Jake M412. This bull won the junior and reserve male championships at Balmoral Show in September, and was placed third in his class at the Dungannon sale.
The father and son team of Neville and Ivan Forsythe, Moneymore, sold three bulls from their long-established Cotrim prefix to average £3,675 each. Leading the Cotrim offering at 3,700gns was the reserve supreme champion Cotrim Ellipse W272 TSI 39 SRI 46. Sired by former stock bull Schivas Captain Black U656, this March 2020 born entry was bred from the Curragh David J513 daughter, Coltrim Evana N625 - one of 32 cows in the herd, awarded third place in the large herd section of the NI Club’s annual competition. Cotrim Ellipse W272 was Bull Calf of the Year in the 2020 NI Club's 2020 annual competition. One of 32 cows in the herd, awarded third place in the large herd section of the NI Club’s annual competition.

Nigel Fields exhibited the fourth prize Island Farm Farop W611 sold by Kevin McOscar, Cookstown, for 3,600gns. Nigel Fields exhibited the fourth prize Island Farm Farop W611 sold by Kevin McOscar, Cookstown, for 3,600gns. Cotrim Ellipse W272 was Bull Calf of the Year in the 2020 NI Club’s annual competition. One of 32 cows in the herd, awarded third place in the large herd section of the NI Club’s annual competition.

There was a steady trade for Aberdeen-Angus bulls and females at the Society’s February show and sale, held at Dungannon Farmers’ Mart last year. Prices peaked at 4,200gns and 4,000gns, with auctioneer Stephen Redmond confirming a 90% clearance and 11 bulls selling to level at £3,485. Heifers sold to a top of 2,750gns, and six sold to average £1,951.

Topping the trade at 4,200gns was the reserve male champion Woodvale Trigger W797 TSI+36 SRI+49 bred by Alwyn and Carol Armour and Sons, Dromara, County Down. Born in August 2020 he was sired by Kearsibrae Karma S528, and is the first son bred from the Oak Moor M1 Paul S311 daughter, Woodvale Tidy Bee U811. Highest bidder was Harry Wilson from Victoria Bridge, Strabane.

Leading his line-up at 3,900gns was the first prize winning Old Glenort Electric W332 TSI+27 SRI+38. This March 2020 bull was sired by the home-bred Old Glenort Ethan S246 – a son of 14,000gns herd sire The Moss Quebec K027. His dam is the Netherton Kentucky daughter, Schivas Ermiss T520. Buyer was dairy herd owner Robert Anderson from Dungannon.

Second highest price of the day at 4,000gns was paid to the Matchett family – Nigel, Gail, Sarah and Sam from Portadown, who sold three bulls from their noted Birches herd to average £3,500 each. Selling at 4,000gns to Geoffrey Hawthorne, Armagh, County Armagh, was the first placed Birches Lord Hudson W255 TSI+34 SRI+47. This April 2020 entry is a son of the herd’s former stock bull Cheeklaw Emlyn P480 – All-Ireland Balmoral supreme breed champion Carlhurie Epic P021, and is out of a home-bred dam by Cardona Jewel Eric M826.

Nigel Fields exhibited the fourth prize Island Farm Farop W611 sold by Kevin McOscar, Cookstown, for 3,600gns. Nigel Fields exhibited the fourth prize Island Farm Farop W611 sold by Kevin McOscar, Cookstown, for 3,600gns.

Leading the female offering at 2,750gns was the second placed Old Glenort Edmonton W265 TSI+36 SRI+49 sold for 3,500gns to Messrs M and B Stephens, Carryduff. This March 2020 entry was sired by the 2017 Balmoral supreme breed champion Carlhurie Epic P021, and is out of a home-bred dam by Cardona Jewel Eric M826.

The third placed Old Glenort Edmonton W265 TSI+36 SRI+49 sold for 3,500gns to Messrs M and B Stephens, Carryduff. This March 2020 entry was sired by the 2017 Balmoral supreme breed champion Carlhurie Epic P021, and is out of a home-bred dam by Cardona Jewel Eric M826.

The champion was snapped up by Patrick Quinn from Kircubbin, County Down, for 3,500gns.

Nigel Fields exhibited the fourth prize Island Farm Farop W611 sold by Kevin McOscar, Cookstown, for 3,600gns. Nigel Fields exhibited the fourth prize Island Farm Farop W611 sold by Kevin McOscar, Cookstown, for 3,600gns.

Drumhill leads Aberdeen-Angus trade at 5,100gns and 5,000gns

Commercial suckler producers and dairy farmers were out in force to secure stock bulls at the native breeds show and sale, held at Dungannon Farmers’ Mart last April.

There was a steady demand with Aberdeen-Angus bulls reaching heights of 5,100gns and 5,000gns. Following a complete clearance auctioneer Trevor Wylie confirmed that 11 bulls came under the hammer to average £3,847 each – an increase of £400 on the 2021 sale.

Topping the trade at 5,100gns was the male champion Drumhill Junior Eric W993 TSI+40 SRH+43 bred by Jonathan and Lisa Doyle, Cookstown. Born in June 2020, he was sired by the home-bred Nightingale Proud Jake O405 son, Drumhill Lord-Hatfield R632 ET – 11,000gns intermediate and supreme Stirling champion in October 2016.

His dam is the Rawburn Lord Ross C216 daughter, Rawburn Joyful Erica H772, one of the herd’s foundation females and still going strong at fourteen-years of age. The male champion attracted numerous admirers and bidders, and was sold to Messrs DJ and JS Hatrick from Londonderry.

Drumhill Lord-Hatfield R632 ET also behind the breeding of the reserve male champion Island Farm Blackboy W751 TSI+43 SRH+50, bred by Kevin McOscar from Cookstown. This July 2020 entry was bred from the Tolney Jose Enrique N957 daughter, Blelack Blackbird S830, and sold for 4,400gns to Ivan Swaile from Rock, Dungannon.

Kevin McOscar sold the fourth placed Island Farm Mattie W725 TSI+40 SRH+55 for 3,800gns. Born in April 2020, he was bred from the Abberton Eminem M285 daughter, Goulding Missie S810. This one was snapped up by Bill Henry from Cookstown.

The February 2021 Home Farm Lord-Harley X592 sold at 3,900gns for Fintan Keown from Ballykelly. Sired by Intelagri Matteo, his dam is the Relaghan Noel daughter, Home Farm Lady Helena U286 – one of 10 pedigree and 25 commercial cows at the County Fermanagh-based farm. This second prizewinner was a heifer’s calf and sold to dairy farmer James Arthur from Templepatrick.

The Matchett family’s noted Birches prefix sold three bulls to average £3,115 each. Leading their line-up at 5,100gns was the first bull into the sale ring. Birches Lord Jackpot W163 TSI+25 SRH+30. Born in April 2020 he is by the herd’s former stock bull, Carrigree Fred, and is out of the Bunnial Philip K1268 daughter, Birches Lady Jenny G171. Buyer was dairy herd owner Robert Anderson from Dungannon.

Samantha Allen, and nephew Allen Shortt, sold the first placed Crew Lord Henry X065 TSI+29 SRH+31 for 3,300gns. This January 2021 entry was sired by Rawburn Lord Ross C216, and is out of the Wedderlie Blackbox J935 daughter, Mogeely Lady Hazel M224.

The female champion was the yearling heifer Minran Missie X267 bred by Gordon and Rachel Elliott from Derrygonnelly. This February 2021 entry was sired by Rawburn Black Bush S420, she is bred from Goulding P Missie 902, and sold for 1,200gns to T Trouton from Dungannon.

Frank Moore, Newtownabbey, sold the four-year-old cow Crieve Bronagh’s Bonnie U685 for 3,000gns. This second calver was sired by Crieve Forthex S129, and is out of a home-bred dam by Old Glenor Evolution L295. Included in the price was her February-born bull calf by Crieve Desperate Dan V711. Buyer was S Moore from Derrynoose.

Jonathan and Lisa Doyle also secured a bid of 5,000gns for the third placed Drumhill Quintin W026 TSI+44 SRH+54. Another by the home-bred Drumhill Lord Hatfield R632 ET, he was born in June 2020 and is bred from Nightingale Queen Lois N699 – one of 50 cows in the herd. Buyer was Gary Young from Castlederg.

Nigel Fields exhibited the reserve male champion Island Farm Blackboy W751 bred by Kevin McOscar, Cookstown. He sold for 4,400gns.

Number 1 – The number 1 breed and brand in the red meat sector, spear-headed by leaders at the forefront of the industry

Strong demand – Aberdeen-Angus cattle command a premium price. This is not going to change as the breed’s demand continues to grow

High growth rates – A perfect blend of production, quality and fertility paired with unrivalled growth rates

Meeting market requirements – There is no other breed in such high demand as you do to produce beef fit for the future at the correct weight

Great maternal traits – Easy calving, calf vigour and milk yield. Aberdeen-Angus cows possess unbeatable maternal attributes

Futureproofing your operations – A breed society that works as hard as you do to produce beef fit for the future

Versatility – The traits available with Aberdeen-Angus genetics are a great fit for all suckler and dairy herds. The cattle are adaptable to suit your farm business

Money well-spent – Aberdeen-Angus allows for a medium-sized cow with a high weaning percentage, meaning more kilograms weaned for every pound spent

Hardiness and efficiency – The breed is adaptable to any environment, converting low cost grassland to a very high quality end product

Longevity – Good longevity ensuring optimal payback on your investment

Aberdeen-Angus is fit for the future

Why Aberdeen-Angus

www.aberdeen-angus.co.uk
Females dominate the Summer National at Norfolk

The Aberdeen-Angus breeders from across the country flocked to the Royal Norfolk Show in June for the breed’s Summer National Show.

The fixture was judged by Brian Clark, from the Ayrshire-country flocked to the Royal Norfolk Show in June for the breed’s Summer National Show.

The Johnsons’ 47-strong consignment, including calves, made 4,000gns. First up was Yearsley Eston Anne Y417, a January 2022 daughter of Balmachie Jack Eric, out of a Rawburn Boss Hog-sired dam, Yearsley Eston Anne T271, who sold to the Ainsworth family in Lancaster.

A second Eston Anne out of the same dam, this time the previous year’s calf, the January 2021 McCormick Pathfinder daughter X386, in-calf to Rawburn Bannockburn, sold north of the border to I and A Burgess in New Abbey, Dumfriesshire.

Yearsley Eston Anne T271 was sold earlier in the sale and, at 3,800gns, made her way to John Elliot’s Rawburn herd in Kelso.

The Johnsons also sold another cow and calf outfit at 3,600gns when Yearsley Royal Lady U302, a Boss Hog daughter out of a laymount Willinger dam, together with her Pathfinder bull calf at foot, went to Richard Gratton in Kirkby Misperton.

Opening the sale for the Johnsons was their March 2020 bull, Kapaldi, bred by Martin McCormick, who farms near Newton Stewart, the son of Rawburn Excalibur purposefully acquired for his easy calving. He sold for 3,000gns, going to Northern Ireland with M Tighe of Batterstown in Co. Meath.

The Johnsons’ 47-stong consignment, including calves, sold to an overall average of £2,164. The fixture also featured the annual production sale on behalf of the local Aberdeen herd of South Craven father and son breeders David and Josh Isherwood, Lane Bridge Farm, Kirkwall.

Their consignment at 5,000gns was Airedale Kinannie T639, a 2017 September twiced-calved daughter of Weeton Ephos, bred from the same Rawburn prefix family and sold seven months in calf to Weeton Black Broke to Oakamoor Angus in Hasby, York.

Other Isherwood sales at 2,000gns-plus included one at 2,800gns, this for a fully homebred June 2020 cow and mother of one, Airedale Pastelle V657, sold in-calf to Shadwell-Finnigan X262. The Isherwoods, who continue to run Isherwood Butchers in Kirkliston, Slidens, where Angus meat from their Airedale herd remains ever-popular, achieved an average for seven successful sales of £2,730.

Averages (65-head): Aberdeen-Angus heifers, £1,900; cows-in-calf £2,702; cows with calves, £2,473.

The isherwood family’s 5,000gns top price Airedale Kinannie T639 at CCM Skipton’s annual Aberdeen-Angus breed highlight

The Aberdeen-Angus Cattle Society’s fifth annual autumn pedigree sale at Skipton Auction Mart in November included a major reduction on behalf of Adrian and Penny Johnson’s Yearsley herd, which saw them top the sale at 7,800gns with a cow and calf outfit.

Sold separately and making 5,600gns was the June 2019-born Liley Red Designer daughter, Yearsley Royal Lady V355, the last heifer out of their Old Wall Royal Lady H663 dam. She was sold in-calf to McCormick Kapaldi to A and J M Taylor of Mossall, Blackburn. Her March 2022 heifer calf, Royal Lady Y427, also by Kapaldi, followed her mother to the same purchaser at 2,200gns.

The Johnsons have been breeding Angus cattle at Clarence House Farm since 1987. Next in the money for the family was a pair of sisters from the Eston Anne family, which both made 4,000gns. First up was Yearsley Eston Anne Y417, a January 2022 daughter of Balmachie Jack Eric, out of a Rawburn Boss Hog-sired dam, Yearsley Eston Anne T271, who sold to the Ainsworth family in Lancaster.

A second Eston Anne out of the same dam, this time the previous year’s calf, the January 2021 McCormick Pathfinder daughter X386, in-calf to Rawburn Bannockburn, sold north of the border to I and A Burgess in New Abbey, Dumfriesshire.

Yearsley Eston Anne T271 was sold earlier in the sale and, at 3,800gns, made her way to John Elliot’s Rawburn herd in Kelso.

The Johnsons also sold another cow and calf outfit at 3,600gns when Yearsley Royal Lady U302, a Boss Hog daughter out of a laymount Willinger dam, together with her Pathfinder bull calf at foot, went to Richard Gratton in Kirkby Misperton.

Opening the sale for the Johnsons was their March 2020 bull, Kapaldi, bred by Martin McCormick, who farms near Newton Stewart, the son of Rawburn Excalibur purposefully acquired for his easy calving. He sold for 3,000gns, going to Northern Ireland with M Tighe of Batterstown in Co. Meath.

**Greenacres heifer is ‘Top Lass’ at Aberdeen-Angus calf show**

A n impressive show with some phenomenal and well-turned-out animals was how Scottish judge Nicola Howie described the NI Aberdeen-Angus Club’s annual calf show, held at Dungannon Farmers’ Mart last November.

The event attracted more than 70 calf and young handler entries, with strong competition in the young handler classes. Top place in the junior section went to Jasmine Parke from the Coolermoney herd, Strabane. The intermediate class winner was Joe Mallon from the Swatragh-based Knockoniel herd, while Sam Matchett, Birches herd, Portadown, was the winner of the senior handling class. Star of the show, winner of the heifer calf championship and the supreme overall title, was the seven-month-old Greenacres Top Lass Y201 ET, bred by new breeders Noel Willis and son Daniel from Portadown.

The father and son team established the Greenacres herd in 2020 with advice from a good friend and fellow pedigree breeder, Brian Anderson (Drumgar Lodge). Foundation females and embryos were purchased from the HW and Netherton herds, owned by William McLaren in Perthshire, and the Mosshall herd in West Lothian. The Greenacres prefix currently comprises eight black and Red Angus females. The 2022 calf show winner resulted from an embryo from Netherton Top Lass T879 ET and the AI sire Netherton Americano M703. Glenbrae Red Miss Kayo Y477 ET, bred by William and Jane Dodd and sons Jamie and Lewis from Saintfield, took the reserve heifer calf and the reserve supreme championship awards. The eight-month-old heifer was sired by Mosshall Red Evolution 353 ET and was out of Gannon Red Miss Kayo Americano M703.

The 2022 calf show was judged by Mosshall Red Junior Eric U911, which was born heifers were by Mosshall Home Farm Ebony Stunner S087. The award for the champion pair of calves was won by Portadown, was the winner of the senior handling class. The event attracted more than 70 calf and young handler entries, with strong competition in the young handler classes. The eight-month-old heifer was sired by Mosshall Red Evolution 353 ET and was out of Gannon Red Miss Kayo Americano M703.

The Parke family’s Coolermoney herd dominated the yearling championship line-up. Coolermoney Ruth X086 was the yearling champion, while her herd mate Coolermoney Eric X145 collected the runner-up plaudits.

Born in March 2021 and sired by Rawburn Jagger Eric R094, Coolermoney Ruth X086 was no stranger to the limelight, having won the overall reserve award at the NI Aberdeen-Angus Club’s summer championship at Clogher in July. She was bred from Coolermoney Rachel Y913 – one of seven cows in the herd.

The July 2022 Coolermoney Eric X145 was sired by Rawburn Black Bush S420 and bred from Cloghobell Emma R244. The judge described him as a flashy young bull, full of character. Tullybryan Lord Jono Y455 scooped up the bull calf championship, a ten-month-old Stouphill Bomber T882 son bred by Fiona Troughton, Ballagwally. His dam, Tullybryan Lady Jonelle S884, is one of 10 breeding females in the herd.

Winning the reserve bull calf championship was the five-month-old Home Farm Erne Y802 bred by Fintan Keown, who runs a herd of 10 pedigree and 30 commercial cows at Belleek. A son of Haymount War Smith R578, he is out of Home Farm Ebony Stunner S087.

The award for the champion pair of calves was won by D dilery Delilic Y162 and D tary Diane Eric Y151, bred by NI club chairperson Hilda Bransford, a son of Haymount War Smith R578, he is out of Home Farm Ebony Stunner S087.

The award for the champion pair of calves was won by D tymery Delilic Y162 and D tary Diane Eric Y151, bred by NI club chairperson Hilda Bransford, Scarva. These March 2022-born heifers were by Mosshall Red Junior Eric U911. The Matchett family claimed the reserve award with Birches Bell Y911 and Birches Lord Jacob Y767.

The special sale of stock from the Dunblane-based herd was held at Harrison & Hetherington’s Borderway Mart in Carlisle in October.

Leading the charge at 6,500gns was November 2020-born in-calf heifer HW Blackbird W248. By HW Evander S051, and out of HW Blackbird R501, she sold in-calf to HW Mr Blackbird T875, by Rawburn Boss M554. She sold, in-calf to HW Evander S051, to Thor Atkinson Steel Fabrication, Ulverston, Cumbria.

The next at 5,000gns was five-year-old cow Netherton Blackcap May S087. She is an ET daughter of the $285,000 Red Evolution 353 ET and was out of Gannon Red Miss Kayo Americano M703.
Memorable day for Ballindalloch team at Black Beauty Bonanza

The North East Aberdeen-Angus Club’s 23rd annual Black Beauty Bonanza sale at Thainstone Centre proved a memorable day for event sponsors, Ballindalloch Home Farms, when they took home a throng of championship titles.

The Ballindalloch herd is owned by Guy Macpherson-Grant and managed by husband-and-wife David and Susan Johnstone.

Leading the way with the yearling heifer championship was Ballindalloch Pam X619, a 21-month-old daughter of Ballindalloch Earl N397, with the reserve yearling bull championship going to the similarly-aged Ballindalloch Mr Punch X628, a son of Varis Punch V133, who is destined for the bull sales at Stirling this February.

Under the watchful eye of the day’s judge Alistair Clark of the Duncanziemere herd in Ayrshire, the pair went on to stand reserve for the award for the best pair of home-bred yearlings.

The herd also stood reserve for the heifer calf championship with Ballindalloch Fleur Y662, by Wedderlie Timaru M594, and chalked up another first prize with heifer calf, Ballindalloch Miss Paloma Y658, also by Varis Punch.

The long journey from Fort William proved worthwhile for Ewen Cameron, whose sole entry, the April-born bull calf, Kilmallie Juggernaut Eric Y389, by HF Rebel 53Y, added to earlier show successes last year. This included the championship at Lochaber Show, male champion and reserve overall at Agri Expo at Carlisle, and junior male and reserve overall junior champion at the Stars of the Future show at Stirling.

Yearling bull champion was Tonley King Paco X812, from father-and-son, Neil and Mark Wattie, Mains of Tonley, Alford, who also stood reserve for the yearling heifer championship with Tonley Annie X855. Both are sired by the stock bull, Tonley Jester Eric S318, and together carried off the award for the best pair of home-bred yearlings.

Other first-prize rosette winners included Stephanie Dick, Westeron, Stirling, with Stephick Emlie Y258, by Retties JFK M195. This went on to win the heifer calf championship and the bull calf, Shadwell Fleetwood Mac Y298, by Shadwell Evolution T003, reserve junior champion at the Stars of the Future show.

Border breeder John Elliot, through the Trustees of the late Gordon Brooke Estate, took the reserve bull calf championship with Gordon Profit Y814, and with a third prize heifer calf, Gordon Pole Star Y763, also the award for the reserve best pair of home-bred calves. Both were sired by Cheerbrook Profit V138.

The best pair of home-bred calves came from the Cardona herd at Doune of Scotbeef managing director Robbie Galloway, with Cardona Ermus Y254, and the third prize bull calf, Cardona Jeweliot Y99, both by Stouphill, Mr Peroni.

The Aberdeen-Angus Advantage

- Easy calving reduces the potential for empty days thanks to less interventions
- Low birthweight and easy calving means greater calf survival, increasing productivity
- Suckler cows that are cheaper to keep
- Short gestation means more days in production and more milk in the tank
- Up to 25p/kg premium price on offer worth up to £80/head on a 330-kilo carcase
- Easy fleshing cattle can be finished from forage reducing expensive concentrates
- 25 litres/day
Stephick calf dazzles buyers at Black Beauty Bonanza by topping 10,000gns

A solid trade was realised at the inaugural Black Beauty Bonanza Elite female sale in November when seven lots sold to average £4,530 and topped at 10,000gns.

The sale was managed by the North East Scotland Aberdeen-Angus Club, Dowbiggin Marketing and ANM Group at Thainstone, and realised a 59% clearance rate.

Sale topper was Stephanie Dick’s January-born calf Stephick Emilie Y258, which is sired by Retties JFK and out of Stephick Emilie V563, a daughter of the 14,000gns Weeton Diamond Mine. Emilie Y258 was crowned heifer calf champion in the Black Beauty Bonanza Show earlier that day. She sold south to D Cooke, Blackrod, Bolton, who had travelled up especially to purchase her.

Neil and Mark Wattie, Mains of Tonley, Alford, received 5,200gns for their third prize-winning heifer calf Tonley Ester Y928. This March-born youngster is backed by one of the most prolific cow families at Tonley and is also the daughter of the renowned sire Tonley Jester Eric. Her maternal grandam has produced sons to 13,000gns, 10,000gns and 7,000gns. The buyer was AN Calcott and Son, the new Aberdeen-Angus breeders at Bielack, Dinnet, near Aboyne.

Hugh and Cara Thomson from the Tynet Aberdeen-Angus herd near Insch, reached 4,000gns for a February-born heifer calf Tynet Duchess Y116. She is the first daughter of Thrunton Poldark to sell from the herd and is out of the famous Duchess cow family. She was placed third in a large class of heifers earlier in the day. She sold to J Etrick, Kitny Knock, Alva, Banff.

Two animals reached the 3,000gns mark. First in the money was Neil and Mark Wattie’s 29-month-old heifer named Tonley Emily W770. Scanned due to calf in April to Grettanhouse Krack Light W221, she is another by Tonley Jester Eric, out of a Rawburn Edge-sired dam. She sold to Peterhead with A M Henderson, Yonderton, Hatton.

The other at 3,000gns was January-born Mosston Muir Ivy Y431 from Alan Rennie, Guthrie, Forfar, which stood second to the heifer calf champion in her class earlier in the day. Sired by Balmachie Raoul, and out of Mosston Muir Ina, she sold across the water to C McBrien, Enniskillen, Fermanagh, who was buying online.
The complete dispersal of the multi-award-winning pedigree Shadwell Aberdeen-Angus herd based in Thetford, Norfolk, saw record breaking sales for in-calf and maiden heifers and a standalone high of £22,000.

Craven Cattle Marts and Stirling-based United Auctions, in conjunction with the Aberdeen-Angus Cattle Society, joined forces to stage the much-anticipated fixture at Skipton Auction Mart in North Yorkshire. This was purposely chosen for its central UK location, creating widespread interest from Angus breeders nationwide.

The sale comprised predominantly females – proven breeding cows, in-calf and yearling heifers. In addition, many cattle by top-notch Shadwell sires were included in the sale, along with embryos.

Undoubtedly the stars of the sale with a £28,000 price tag were a herd favourite, Shadwell Lady Heather P738 and her January 2022-born heifer calf. Lady Heather Y292. Heather P738 is a 2014 daughter of Te Mania Heather P738 and her January 2022-born heifer calf, Lady Heather Y292.

The mother of two scanned in-calf to Evolution fell to a £15,000gns bid from the Isherwood family’s local Airedale pedigree Angus herd in Kidwic. Her second calf, an October 2021-born bull, Shadwell Earthquake X288, another well-bred Evolution son, made 6,000gns when going to W and R Dunlop in Lanarkshire.

Outfits from the Blue Belle line were also in ready demand. Hitting 9,000gns was the October 2016-born Idvies Eland daughter, S934, bred out of a Peter Pershore dam. In-calf to Evolution, she joined Porter Farms in Luton, Northern Ireland. Her 2021 son, Shadwell Bravado, again by Evolution, sold separately for 8,000gns, going to Ireland with M Irwin, of Omagh, Co Tyrone.

A member of the Shadwell show team, Pam T941, female champion at the Great Yorkshire Show as a yearling heifer in 2018, was also keenly contested at the ringside. By Idvies Eland, she sold with her third calf at foot, the January-born Evolution son, Shadwell Power House, for £14,000gns to Messrs Mawer and Benge in Woodhall Spa, Lincolnshire.

Averages: Cows in-calf, £6,021; Heifers in-calf, £9,400; Stock/senior bulls, £7,350; Intermediate bulls, £2,100.

The other main prize-winners were:
- Junior champion – Gordon Pole Star X695 (ET) from the Trustees of the late Gordon R Brooke, Earlston, Berwickshire.
- Reserve junior champion – Rulesmains Elegant X527 from Andrew S Hodge Esq, Duns, Berwickshire.
- Female champion – Tonley Lady Heather V591 from Neil A Wattie Esq, Alford, Aberdeenshire.
- Male champion – Glympton Riley V261 from Glympton Farms Ltd, Woodstock, Oxfordshire.
- Reserve male champion – Rulesmains Pegasus X489 from Andrew S Hodge Esq, Duns, Berwickshire.

Breed records smashed at award-winning Shadwell herd dispersal

The long journey south was worthwhile for Aberdeen-Angus breeders Neil and Mark Wattie when they lifted the breed championship title at the Great Yorkshire Show last July.

The father-and-son duo, who run the Tonley herd near Alford, took the top title with their three-year-old cow Tonley Lady Heather V591 and her February-born heifer calf.

Tonley Lady Heather is by Blelack Evermore J231, and out of Blelack Lady Heather N202. Her heifer calf is sired by the 12,000gns Duncaniemere Jetstream.

Mr Allen awarded his reserve breed championship title to three-year-old cow Weeton Blackbird V519 from Brailes Livestock in Gloucestershire.

She stood second in her class to the champion and is by Rawburn Boss Hogg N630, and out of Blelack Blackbird T853.

In a good mood. 8th—15th September 2023 @ České Budějovice, Czechia worldangus2023.com
‘Extra Flash’ gives heifer the edge in Angus Championship at Balmoral show

A flashy heifer bred by the Armour family from Dromara won the junior and supreme overall Aberdeen-Angus championships at the 153rd Balmoral Show last year.

This was the family’s second successive Balmoral breed title in eight months, having won the supreme award with junior cow Woodvale Miss Annie U436 at the September 2021 show.

Scottish judge Brian Clark from the noted Duncanziemere herd, based at Cumnock in Ayrshire, tapped out Woodvale Delia X867 from the six contenders in the championship line-up at Balmoral Park.

Bred by Alwyn and Carol Armour and sons Lee, Craig and Adam, this fourteen-month-old heifer was sired by the 15-cow herd’s former stock bull Oak Moor Lord Ivanho U419.

Her dam, Woodvale Delia T101, was sired by the 24,000gns February 2016 Stirling breed champion Tonley Evor P044.

Alwyn Armour said: “I bought the maternal grandam Carlhurlie Delight N959 for 3,500gns at Carlhurlie dispersal sale at Strirling in 2016. She was in-calf to Evor, and the result was the heifer’s dam, Woodvale Delia.”

Judge Brian Clark said: “This heifer is very correct and was an easy winner. She is sweet and feminine and has that little bit of extra flash.”

Taking the reserve championship title was the four-year-old cow Drumcorn Lady Ida U492 from John and Ann Henning’s herd at Moira. She was one of three Drumcorn-owned first prize winners competing in the championship.

By the AI sire Blelack Duke J262, the reserve champion is out of the home-bred Drumcorn Lady Ida M955. She was shown with her February-born heifer calf at foot. The calf is one of the first progeny from the herd’s 4,000gns stock bull Solitude Elite V777 ET, himself a first prize winner at the 2022 show.

First-time exhibitors William and Jane Dodd, and sons Jamie and Lewis, from Saintfield, won the reserve junior and best of opposite sex to the champion awards with the home-bred Glenbrae Red Maverick X164.

This fourteen-month-old bull was sired by Mosshall Red Evolution P052, and is out of the Scottish-bred Cannon Red Mary S664, one of 16 pedigree cows in the herd founded in 2012.

The Dodd family also won the prize for the best pair of Aberdeen-Angus cattle. The winning duo were Glenbrae Red Maverick X164 and Glenbrae Red Prince X083, both March 2021-born sons of Mosshall Red Evolution P053.

Neville and Ivan Forsythe, Moneymore, secured the Thompson’s award for the best pair of heifers. The winners were Coltrim Lady Jane X585 and Coltrim Jemma Erica X633, April and May 2021 daughters of Coltrim Javier Eric U911.

Princess Caroline lands top prize at Winter National

March-born heifer was crowned overall champion at the Aberdeen-Angus Winter National Show at the Borderway Agri Expo in Carlisle last October.

The special winter breed show, sponsored by Scottish meat processor Stoddart’s, was judged by Fraser Cormack from Jedburgh in the Scottish Borders.

Mr Cormack awarded his overall championship prize to the overall junior and heifer calf champion – Foxhill Princess Caroline Y167 from Devon breeders Mike and Melanie Alford.

She is a March-born daughter of the 28,000gns Blelack Princess Caroline T867 from Devon breeders Mike and Melanie Alford.

Meanwhile, the reserve overall champion prize went to the reserve junior champion and bull calf champion. This was Kilmallie Juggernaut Eric Y389 from Ewen M Campbell Esq, Steall, Fort William. He is an April-born son of HF Rebel 55, out of Kilmallie Jury Erica S036.

The senior champion and reserve prizes went to other entries from the Alfords. The champion in this section was the 22,000gns Shadwell Lady Heather X250 – a January 2021-born daughter of Shadwell Evolution T003, out of Shadwell Lady Heather P738.

Reserve went to the 32,000gns Blelack Princess Carina X125, bought as a five-month-old at the Blelack dispersal in October 2021. She is a May 2021-born daughter of Kilmaluag Eriskay T203, out of Blelack Princess Carina U972.

The other leading prizes were:
- Yearling bull champion – Gordon Pistol Pete X751 (ET) from the Trustees of the Late Gordon R Brooke, Earlston, Berwickshire.
- Reserve yearling bull champion – Gordon E Type X640 from the Trustees of the Late Gordon R Brooke.
- Yearling heifer champion – Shadwell Lady Heather X250 from Mike and Melanie Alford.
- Reserve yearling heifer champion – Blelack Princess Carina X125 from Mike and Melanie Alford.
- Reserve bull calf champion – Shadwell Fleetwood Mac Y298 from Stephanie Dick, Stirling.
- Reserve heifer calf champion – Dunanzeemore Edwina Y660 from A Clark & Sons, Cumnock, Ayrshire.

SHOWS
Females led the charge taking the Aberdeen-Angus champion and reserve titles at the Devon County Show.

The overall champion award went to Rodmead Priba X026 from Warminster breeder Angus Neish’s Rodmead herd. Priba is a January 2021-born daughter of Blelack Evorats S677, out of Rodmead Pribaby T815. She took the breed championship award after being crowned female champion and best yearling bred by exhibitor.

Her herdmate – Rodmead Ebony X033 – took the reserve overall champion title. She is a February 2021-born daughter of Blelack Evorats S677, out of Rodmead Ebony L636.

Meanwhile, the award for the best group of three went to Somerset breeder Lucy Pulsford, who runs the Wiveliscombe herd. Her winning trio were: Wiveliscombe Delarose R014; Wiveliscombe Distinction of Aurora W027; and Wiveliscombe Donald X033.

Donald also landed the champion male award and prize for the best bull bred in England.

The individual class results were as follows:

Cow in-milk, or in-calf, born before 1 January 2020

Heifer born in 2020
1st – Wiveliscombe Distinction of Aurora W027 from Miss L Pulsford

Heifer born on, or after, 1 January 2021
1st – Rodmead Priba X026 from Angus Neish
2nd – Rodmead Ebony X033 from Angus Neish
3rd – Oakmoor Wella from Oakmoor Angus

Bull born on, or after, 1 January 2021
1st – Wiveliscombe Donald X033 from Miss L Pulsford
Stouphill Quorum takes top honours at 2022 Royal Highland Show

The Allen family of Stouphill had plenty to celebrate at last year’s Royal Highland Show. The family swept the boards with overall and female championships with Stouphill Quorum T208 and male champion with Stouphill Murphys Prince W301.

In front of a packed ringside, judge Alistair Cormack drew Quorum out of a great line up of Aberdeen-Angus cattle on the day. Quorum is a November 2017-born cow by Duncanziemere Jigsaw N087, out of Duncanziemere Jody J318. It was a day for females, with Tonley Lady Heather V591 from the Wattie family taking the reserve champion title. Lady Heather is a January 2019-born cow sired by Blelack Evermore J231, and out of Blelack Lady Heather N202.

Male champion Stouphill Murphys Prince W301 is a March 2020-born bull sired by Logie Defiance T774 and out of Stouphill Marsala Pearl P097. Reserve male champion went to Tonley Ronald X800 from Brailes Livestock. Ronald was purchased as a calf at the Tonley reduction sale in October 2021 for 7,000gns. He is a January 2021-born bull sired by Tonley Jester Eric S318, and out of Tonley Rosebud US81.

Overall and female champion Stouphill Quorum T208

Male champion Stouphill Murphys Prince W301

Full list of Aberdeen-Angus results:

Female, born on or after 1st April 2021

‘Exceptional’ red bull claims honours at Aberdeen-Angus Northern Ireland Summer Championship

Last year, the Northern Ireland Aberdeen-Angus Club held its Summer Championship at the 102nd Clogher Valley Show.

Breed Society President Angus Stovold from the 160-cow Rosemead herd in Surrey judged the annual show, attracting spectators from the UK and Ireland.

Claiming the supreme overall championship was the senior male champion, Glenbrae Red Maverick X164, bred by William, Jane, Jamie and Lewis Dodd from Saintfield, County Down. This sixteen-month-old bull was sired by Mosshall Red Evolution P353, and is out of the Scottish-bred Gannon Red Mary S654. Founded in 2012, the 15-cow Glenbrae herd made its show ring debut at Balmoral last year, with Red Maverick claiming the reserve junior and best of opposite sex to the champion awards. The first-time exhibitors had a super 2022 show season, chalking up a number of accolades, including the breed championships at Saintfield and Antrim shows.

Adrian and Graeme Parke's eight-cow herd, which dates back to 1996, secured the reserve supreme and junior female championships with the home-bred Coolermoney Ruth X086. First time shown, this March 2021-born heifer was sired by Rawburn Jagger Eric R094 and is bred from Coolermoney Rachel V913. Coolermoney won the NI Aberdeen-Angus Club’s best small herd award in 2021, with Coolermoney Ruth X086 taking the prize for the best heifer calf.

Claiming the junior male championship was Old Barr Pitter Patter Y403 bred by Caolan McBrien from Enniskillen. Almost five-months-old, this calf is one of five March-born ET calves by Idvies Eric S733, bred from the herd’s foundation female Idvies Pinky Promise R709. This calf was crowned Ulster champion at Armagh Show in June.

The second-placed bull calf Coolermoney Lord Harry Y167 from the Parke family secured the reserve junior male championship. Sired by the home-bred Coolermoney Rufus W016, this six-month-old calf was bred from Mogeely Lady Hilda N241.

James Porter’s Old Glenort herd, which comprises 60 pedigree cows, won the senior female and reserve senior male championships at the one-day show. His award-winning female was the seven-year-old Cardona Jewel Eric M826 daughter, Old Glenort Edwin R616, shown with her fourth calf at foot, a heifer by Carhurlie Gentilex S124.

The reserve senior male champion was James Porter’s four-year-old stock bull Blelack Dakota U898. Sired by Netherallen Peter Pershore E052, he was supreme champion at Stirling in October 2019.

Fermanagh breeder Fintan Keown took the reserve senior female honours with the two-year-old heifer Home Farm Lady Helen W522. She was sired by Haymount War Smith R578.

Commenting on his champions, Angus said: “The supreme and reserve overall champions are tremendous animals that could compete anywhere. I’ve attended many shows this year, and I haven’t seen a better bull. He is exceptional and caught my eye the minute I saw him. This young red bull is the complete package, oozing breed character, good width and conformation, a great loin, and super legs and feet.”

Judge and President of the Aberdeen-Angus Cattle Society Angus Stovold with William Dodd and son Jamie with their supreme champion Glenbrae Red Maverick X164.

1. Entries for the Herd Book will only be accepted from members of the Aberdeen-Angus Cattle Society.  
2. Entries of stock which belonged to a deceased member will only be accepted from the representative/s provided such entries are made prior to 1st January following the deceased member's death.  
3. A calf shall only be accepted for entry in the Herd Book if its sire and dam have been entered in the Herd Book, and a DNA sample has been taken, sent to, and received by the Society for sire verification. A DNA sample is required for all bulls born before 1st January 2000, for all females born before 1st January 2004 and any bull or female born after that date.  
4. Notwithstanding byline 3, imported animals may be entered in the Herd Book provided they are entered in the Herd Book of the country of origin and that there are no certified such certificates and other documents of the Council of the Society may be required to be in place before acceptance. Any animal entered will carry the identifying letters in the pedigree and all relevant details including the information on sires of calves imported in stock, will appear at the end of the Herd Book.  
5. The breeder of an animal is the owner of the dam at the date of calving or in the case of a calf if born by Embyra Transplant and registered according to the following rules:  
6. All calves must be ear-tagged according to current EU identification regulations by time of intimation and intimated to the Secretary according to the Council of the Society.  
7. All currently registered females and bulls with the impacted genetics in their pedigrees will not be eligible for transfer into the Society’s Herd Book. Progeny derived from such animals will not be accepted.  
8. Animals entered in the Herd Book under separate ownership by husbands and/or other family members will not be accepted.  
9. Animals showing excessive while markings should not be entered in the Herd Book, and instructions on ownership of stock may be found on the instructions of the Council of the Society. (For guidance - normally, while markings are acceptable on females only on the underline behind the navels and below the ventrum and not prominent on the prepuce and up to and including the scrotum):  
   a. Animals showing, whether fixed or movable, or tissues of udders, will not be accepted for entry in the Herd Book, and if entered uncorrected, may be removed from the Herd Book on the instructions of the Council of the Society. (For guidance - normally, while markings are acceptable on females only on the underline behind the navels and below the ventrum and not prominent on the prepuce and up to and including the scrotum):  
   b. C. An insemination certificate signed by a qualified inseminator or Veterinary Surgeon must be retained by the breeder and available for inspection by the Society for a period of two years following the insemination.  
10. a. Animals showing congenital anomalies will not be accepted for entry in the Herd Book and if entered uncorrected, may be removed from the Herd Book on the instructions of the Council of the Society. (For guidance - normally, while markings are acceptable on females only on the underline behind the navels and below the ventrum and not prominent on the prepuce and up to and including the scrotum):  
   b. C. An insemination certificate signed by a qualified inseminator or Veterinary Surgeon must be retained by the breeder and available for inspection by the Society for a period of two years following the insemination.  
11. a. A. I. REGULATIONS General (applicable to all regulations):  
   b. All currently registered females and bulls with the impacted genetics in their pedigrees will not be eligible for transfer into the Society’s Herd Book. Progeny derived from such animals will not be accepted.
relating to each animal in the Herd Book. The number of days on which the animal was entered in the Herd Book, the birth date of the animal, and the name of the animal must be recorded in the Herd Book. The owner of the animal must provide the Animal Health Inspector with a copy of the Herd Book entry. The Animal Health Inspector must record the date of the visit in the Herd Book and provide a copy of the Herd Book entry to the farmer.

2. The Council shall have the power to instruct a DNA profiling test to be made at any time of any animal that has been sold and for which it is not possible to obtain a copy of the Herd Book entry. The Council may also instruct a DNA profiling test to be made on any animal that is suspected of being incorrectly registered.

3. All results of DNA profiling tests shall be recorded in the Herd Book and shall be made available to any party that requests them.

4. The Council shall have the power to instruct a DNA profiling test to be made on any animal that is suspected of being incorrectly registered.

5. All results of DNA profiling tests shall be recorded in the Herd Book and shall be made available to any party that requests them.

6. The Council shall have the power to instruct a DNA profiling test to be made on any animal that is suspected of being incorrectly registered.

7. All results of DNA profiling tests shall be recorded in the Herd Book and shall be made available to any party that requests them.

8. The Council shall have the power to instruct a DNA profiling test to be made on any animal that is suspected of being incorrectly registered.

9. All results of DNA profiling tests shall be recorded in the Herd Book and shall be made available to any party that requests them.

10. The Council shall have the power to instruct a DNA profiling test to be made on any animal that is suspected of being incorrectly registered.

11. All results of DNA profiling tests shall be recorded in the Herd Book and shall be made available to any party that requests them.

12. The Council shall have the power to instruct a DNA profiling test to be made on any animal that is suspected of being incorrectly registered.

13. All results of DNA profiling tests shall be recorded in the Herd Book and shall be made available to any party that requests them.

14. The Council shall have the power to instruct a DNA profiling test to be made on any animal that is suspected of being incorrectly registered.

15. All results of DNA profiling tests shall be recorded in the Herd Book and shall be made available to any party that requests them.

16. The Council shall have the power to instruct a DNA profiling test to be made on any animal that is suspected of being incorrectly registered.

17. All results of DNA profiling tests shall be recorded in the Herd Book and shall be made available to any party that requests them.

18. The Council shall have the power to instruct a DNA profiling test to be made on any animal that is suspected of being incorrectly registered.

19. All results of DNA profiling tests shall be recorded in the Herd Book and shall be made available to any party that requests them.

20. The Council shall have the power to instruct a DNA profiling test to be made on any animal that is suspected of being incorrectly registered.

21. All results of DNA profiling tests shall be recorded in the Herd Book and shall be made available to any party that requests them.
If a Breeder refuses to co-operate in allowing an inspection for up to 3 weeks, all calves in the herd under 3 months of age at the time of the first notification could be banned from all Society run events for life and the herd banned from all Society events for two years and no bull certificates will be printed for that herd until an inspection takes place at the breeder’s expense.

An Inspector on inspection finds that any of the rules of the Society have been compromised will be sent to the breeder within 20 working days of the inspection. Upon receipt of such notification, which shall act as initial evidence of breach of the rule, the breeder shall have an agreed period of time including the date of the receipt of the written notification to make written submissions to the Society’s representative and/or to produce any evidence in writing in support of any explanation that the breeder might wish to submit in defence of the initial findings purporting to breach of any rule.

Should such written submissions or evidence in writing aforesaid be made by the breeder within a period of working days, then the initial findings of the Inspector shall be final and the Society’s Council representative shall submit the Inspector’s findings to the Council of the Society at their next meeting and they shall proceed to impose the sanctions as set out hereunder.

(i) Should the breeder make a written submission and/or produce any evidence in writing in support of any explanation that the breeder might wish to submit in defence of the breach of any rule, within the agreed period to the Society’s representative/CEO appealing the Inspector’s report, then such written submissions and/or written evidence together with the Inspector’s report will be submitted to Council.

(ii) The matter shall be initially considered by Council to determine as to whether the initial findings of the Inspector’s report have been fully and satisfactorily rebutted and/or answered and/or explained by the Breeder’s written submissions and/or written evidence. Should the Council find that they have then the breeder shall be informed in writing and the matter ends.

(iii) Should the Council not so find then the breeder shall be given an agreed period of time, minimum of fifteen working days’ notice of time, place and date for the hearing of an appeal before the Council or a sub-committee of at least 3 members of council (appointed by Council) which shall be an Oral Hearing.

(iv) The breeder has the opportunity prior of the assigned hearing date the breeder shall outline in writing the basis of his appeal, a list of witnesses intended to give evidence and a summary of their oral evidence and a copy of any veterinary or other report upon which the breeder intends to rely. Evidence shall be submitted in writing to the Society’s representative or CEO at least seven working days prior to the assigned date of the hearing.

(v) In the hearing of the appeal which shall be in private; the rules of natural justice shall apply. There shall be a right to be legally represented solicitor or barrister. The breeder may however nominate at least seven days prior to the hearing, a representative of a farm representative organisation, Agricultural Consultant or veterinary surgeon to represent him/her. The case against the breeder shall be made by the Society. Evidence shall not be taken under oath or affirmation. The appeal hearing shall be chaired by the president or Chair of Technical Council and other members. Each member of the Appeal Committee shall be required to attend by a member of Council (or sub-committee thereof) nominated by the chairman. The council or sub-committee hearing the appeal shall operate by simple majority and the chairman of the hearing shall have a casting vote. The decision of the council or sub-committee which shall be in writing may be reserved or given on the day of the hearing and shall be final.

In the operation of this procedure, there should be an incontestable presumption that this findings of the Inspector on the inspection regarding age, weight, sex, tag number and all other such findings in the Inspector’s report shall be correct and accurate.

For the purposes of this procedure all written notifications from the Society to the member breeder shall be by ordinary pre-paid certified post which shall be deemed to have been received by the member breeder in the ordinary course of post and all written notifications from the member breeder to the Society shall be by prepaid registered post addressed to the Society’s registered office.
